I had the same problem with my old 520 STFM with Magic 4 which aided in
my frustration. It didn't like Extendos Pro at all, didn't mention
anything about adding a CD ROM driver either. I solved the problem when
I replaced MAGIC's DESKTOP with Neodesk 4 under Magic OS did it finally
work.

2. Spam Bam!

Newsgroup: comp.sys.atari.st
Date: 1998-01-01 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <883673415@acpu.com>
Source record: 110689

I read a healthy article about the problem of E-MAIL spamming
unsolicited junk E-Mail) in the Idaho Statesman newspaper Tuesday
morning. The article discusses the massive problem with individuals and
businesses who subscribe for E-MAIL accounts receiving spam. It laid
out some of the extreme cases and costs businesses incure dealing with
the problem. To my delight the United States Congress may now be getting
involved in with it proposing new legislation requiring the those who
send E-Mail of any kind have legitimate return addresses attached to the
E-Mail.
I urge all U.S. citizens that are concerned about the problem of spam
contact their Congressmen in writing and tell them how you feel about
it. It's nice to know that they are finally going to address the issue
but without us bitching about it to them they may not do much about it.

>>
>>I have had a couple of messages saying the ST+ Fanzine web page was
>>unreadable because of the dark background, unfortunatly no setup info
>>or return emails?.. When I test it.. the background doesnt show.. and
>>as its a table over a background then I can't see whats doing this..

Well I removed the dark background... now thats better..

I now know what the problem was.. in a sense?, my CAB I have the "Use
document settings" not set.. and they look alright.. its if you have
this ticked then it lookes gorey under CAB.. however I think its fixed
now..

Anyone who hasnt checked the ST+Fanzine web page for a while should
do now..theres LOTS of updates :)

>I've checked it today (New years eve). It works fine in Internet

Make sure you're using the latest version of ExtenDOS Pro, which is
2.4b, I believe. It works fine here with MagiC 5.11.

No, I'm still having Falcon problems, unfortunately, but I've been
running the BBS on my STE. That is, until midnight last night. The
BBS is now down for good, after more than 12 years. Just not enough
callers, and too many other interests to keep it going. It was a fun
ride while it lasted.

>and a math coprocessor before that.

There's a lot of great stuff coming out for Atari these days, such as
MagiC, CAB, NVDI, Ease, Nemesis, HDDriver, etc. I was pretty much
burnt out on Ataris for awhile, but have been 're-born,' particularly
when I got MagiC, which was like getting a new computer. Of course,
getting a Falcon with 14 megs sure helped a lot!

>Well, glad to hear from you, and good luck with everything and stay well.

Thanks...same to you. Happy New Year!

Hello Joakim (And Gott nytt ?r - if you speak this mad language)

```
> I was wondering if there are any good programs for adding
> sounds to certain events for the STe?
```

Several. Try SAM - System Audio Manager or Crazy Sounds. Don?t know if SAM is commersial though...
There is a small program called Bellsound too, but it only changes the system bell in to a sample.

included a copy of ZERO-X sample editing sofware for the atari on their
cd that comes with the mag. This looks like a nice program except that
I can't seem to get it to boot up on my falcon/14 megs.
Does anyone have this program and any help would be greatly appreciated.
Its nice to see that the Atari is still being considered. A lot of the music
demos on the cd were also done on the atari.
Bye for now....Ron Lukawitski

Yep :-)
You simply need to upgrade Extendos Pro, I had the same problem &
still have the upgrade paches if you like I'll send em you though
your supplier should upgrade you at no charge, At least mine
did.
Pete.

Hi Bram,

Thanks for the info. Actually, I use HD ver.7.04 which I think does the same thing . Let me know if I'm wrong here. The only time I've ever had this dialog via MagiC is at Titan's site while trying to D/L a file that I'm not sure is even there now. I added Addmen as you suggested and still wasn't able to D/L it.(curious) Let me know what you think. BTW, love your country used to live in Maastricht.

Helen, the Pacifist Web site has numerous TOS ROM images that you can use with Pacifist... You can do a search on "emulators" and it will show you quite a few items. BTW, I still highly recommend a "real" TOS machine over any emulator. You'll be much better off, IMHO... :)

Joakim, AFAIK, SAM (the System Audio Manager) will work with any DMA equipped Atari, such as the STe... There is also a dialog replacement program from Tony Barker (its on the Moving Pixels CD-ROM) that gives sounds to dialogs. Then there is Crazy Sounds, GemSounds, and gee, I guess there is a lot, after all! ;)

This my response to the person with the above subject. Yes it would be ironic
to get your response in a thread.

Ok I too, cannot follow a thread in NEWsie. However I assume you are reading
offline. What I am doing is reading the messages, deleting them, return
to the intial Newsgroups window, reopen the comp.sys.atari.st and the
following thread is there to read. A little clumsy, but it works. Since
you know the ones with the +sign have a followup post deleting poses no
problem and you can reply to the last thread.
I hope this helps for now.
If there is a better way I am open to suggestions.

And one other thing, I just upgraded from .82 to .84 and what a breeze the
change over was. So I am using Newsie .84 for the first time today.

>
>--
>□□Alexander

Thanks for your answers. I was trying to find out if I could print with just
Gdos and an Slm804. Yes the SLM 605 is same stuff different package. It woould
appear with NVDI, I would get the same print quality as GDOS:-(however it is
better than nothing. I would be interested to know though if I am doing something
wrong when trying to save a metafile? The GEM files I save don't appear to
work with my prg that load gem files. It will load the file but display all
the text as a single line overwriting itself and numerous other unwanted things.

If I can save a GEM file and use it in Calamus 109n I would be pleased. I can
control the print quality within Calamus, and fudge the dithering aspect to
get better quality, by controlling the raster.

So if I am correct there is no standard GDOS output for Cab?
Are the Metafiles NVDI specific? I am a bit confused here. I can understand
why I might not be able to print straight from Cab using GDOS, but I thought
I should be able to save as a metafile?

Oh yes, and Alexander Clauss, thank you for 1.5 CAB:-).

I guess I am going to have to do some updating.
I know nothing about NVDI, and will look into it, however just a comment,
I would think it would be able to handle halftones with an SLM804/605
as other programs have done this working in a GDOS environment.

I hate TTP stuff. For some strange reason I am TTP illiterate. I can
barely use ARC.TTP without a shell, I have failed in every attempt to use
ZOO without a shell, ticks you off when people zoo the shell you want to
for zoo because you can't zoo without a shell:-). Anyways, little has changed
other than I want to get some stuff from the umich ftp site and these files
are in .Z format. I can't get the compress utility to find the file.
I can't get Gnu zip to find the file.

I try very basic stuff. I put file xxx.z in same directory as gnu zip.
I type -d xxx.z and it says file not found, so quickly I can't read it.
These are the sound files in gnu zip format which saves with only .z

I am doing something wrong with the command line. I have never been successful
with a commandline so I am not surprised. I have used the -h function for
help and Control S to stop the screen from flashing by, (BOY DO I HATE THIS
STUFF), So I know the commands are -U and -D.

I know I am missing something, so if I get it right once I will never ask again.
Of course in 12 years I have managed to avoid TTP at all costs or if I have
to use it I try for wildcards to limit my poor filename typing.

So please explain to me, very slowly, like you are talking to a small child
how I work from a command line.

Yes I read docs too, and I even follow the examples, I only get frustrated, not
results.

THanks.

I am looking for a used SLM 804laser for parts. My nephew just did in one
of my printers by putting in a plastic overhead sheet through the machine and
it melted on all the rollers. There are some overheads you can put through a
laser, which we do all the time, and the one he put through, wasn't one of them.

Price from cheap, to very cheap,
In Canada, Ontario, Brantford region.

Also if anyone can direct me to a source for SLM 804 parts in North America
thats great too. I need some Toner and possibly one or two drums.

Well thats not very helpfull to a perfectly valid question ?

Yes you can download free games off the internet, just go to
http://www.users.zetnet.co.uk/paxton/stosser/home.htm

Instead of attacking people, why not point them to free games like
they ask ?

<smile>

Selling a brand new (used a few months) Mega ST style detached keyboard and connecting cable. Comes with hand made (by me) adaptor cable to permit use of the keyboard with a Falcon! I had to put this rig together to make a program called VideoMaster work with the Falcon. As I'm now using a PC for video and the Falcon for MIDI, I have no use for this keyboard. Only $50 for the keyboard, a shielded Atari keyboard cable and my homebrew adaptor. This setup cost $120 to assemble, so you pay shipping at my discount price.

Well I have read a few answers to this question and never seen the
right one ...
The right one is:

Go to the Ultimate TOS Software Index at the specific GAMES page and
you'll find there a lot of games to download ... most of them are
FREE.

http://ping4.ping.be/dipching-drulkhor/PRG-GAME.HTM

Please USE the U.T.S.I for what it's made !!!!!!!!!!!!!!!!

Really, some days I wonder why I have made all this work !!

Jo

Where can I find console(.ttp)?
For some mysterious reason (for me at least) pppd redirect the output
to the screen although it shouldn't do this at all.
The strange characters I was talking about are the same characters I
get when I use a common Com program like "Rufus" or "Connect" to log
in at my ISP.

I've used the TAF-package to setup my mintnet configuration so it
looks a little different.
My ppp144 looks like this:
/usr/etc/pppd connect '/usr/etc/chat -v -f /usr/ucb/chatfile' /dev/modem2 110

My chatfile like this:
ABORT 'NO DIALTONE'
ABORT 'NO CARRIER'
ABORT BUSY
"" at OK atd123456 CONNECT "" gin:--gin:--gin: my logname word: my password

>> And this is what I get on the syslog file

```

```
AFAIK I didn't remap the modem2 port to ttyb. In fact I don't know how
to do this at all.
My modem2 port works otherwise very well with my usual MiNT/mintnet
setup. Rufus and Teleoffice works. Connect doesn't work for the moment
but this has probably something to do with the Connect setup. It's
still configurated for my TT. Maybe just maybe Connect can't get away
with the serial.cpx I was using during the try-out. I must check this.

>The 'LCP: timeout...' part is not a problem though.

Yep, that's what I more or the less get with my normal setup.
One remark: I'm still using pppd2 2.1.2 as I found I got too many
troubles with pppd 2.2.0 on the Hades. One of them is that the system
hangs after disconnection.
Also I get a "CCP: timeout sending Config-Requests" message in my syslog
file. Any idea why?
>
>I really suspect a pppd setup problem (maybe related to a mint.cnf or
>naes.cnf? problem). This is a bit stupid, but did your pppd setup works
>fine (when launching manually with sh for example)?

My usual setup works fine. I use it every day to surf on the Web.
I've installed tcsh as an application to execute my dial script
"ppp144" so whenever I double click on ppp144 tcsh come up in a
toswin2 window and execute the script.
For disconnection I drag the pppd.??? onto the garbag.

>are in .Z format. I can't get the compress utility to find the file.
>I can't get Gnu zip to find the file.

My guess, it isn't a GNU ZIP file but a COMPRESSED file. AFAIK GNU ZIP
has *.z (lower case) as file extensions whereas COMPRESSED file has
*.Z (upper case) as file extension. What you need is "compress.ttp".
Yes again a ttp prog:-((. I don't know where you can find it.

It is dead easy to use. Start the ttp and give as parameter "-d
name_of_the_file but without the extension. I'm assuming you use
compress.ttp in the same dir as the file you want to unpack.

e.g. the file name is "sound.Z" so you fill in "-d sound"

Piece of cake isn't it?

Hope this help

>in Newsie?
>
Several ways:
the right arrow (->) key expands threads, and the left arrow (<-)
collapses them.

You can also turn thread compression off in the NewsReading Options
dialog in the Preferences Menu. Look for "Create Threads" and
"Collapse Threads".

From NEWSIE.DOC:

Article Threads are recognized. Threads are a group of related articles,
and are marked with a '+' for the primary article, and '-' for subordinate
articles. Threads formatting is dependent upon the Newsreading Preferences
'Create Threads' and 'Collapse Threads'. If 'Create Threads' is un-selected,
then Thread processing is bypassed and articles are shown in numeric
(ascending) order. If 'Create Threads' alone is selected, both the primary
('+') articles and subordinate ('-') articles will be displayed. If the
'Collapse Threads' option is selected, only the primary ('+') articles
will be displayed.
The left and right arrow keys control the expansion and/or collapse of
individual threads. Selecting a primary article and pressing the right
arrow key will display all subordinate articles for that thread. Clicking
the left arrow on the primary, or any subordinate article, will collapse
the thread back to just the primary article.

I hope this helps,
John

I never heard that HSMODEM was intented to become a part of MagiC. What I
heard was that MagiC would include some (generally sensible) GEMDOS extension
that HSMODEM requires, and it's this what happened. In this context, the HSMODEM
initialisation messages make perfect sense as you'll notice.

> HSModem there to correct the serial port code in Magic, even though I'd
> have thought that it would have been corrected.

The MagiC code is corrected of course, and this is what makes me wonder why
you have problems. HSMODEM under MagiC is still sensible because it's highly
optimised, while the MagiC code is not.

> one else?) have any suggestions? Thanks in advance! :)

Usually such a situation indicates that no response at all comes in. Watch
your modem lights : Do you notice some data coming in while CAB counts down ?
Or is it just the send LED flickering once and the receive LED remaining
dark all the time ?

If nothing comes in, then timing out is the only sensible reaction.

Yes, MIDI.PRG must be installed if you wanna use the Midi port for networking.

> Do I just randomly name
> the host computer?

You can do that.

> I also want to use the remote dialing, which is the
> masquerading part I believe.

Establish your little Intranet first, and worry about that later.

> Also I am using Med Net. Must I disable this program?

Better do so until you got the Intranet working. Then you can check if it
works if both are enabled.

> I would like to use
> both. I don't want to lose access to the ST hd.

I hope to find time soon to start on the network file system that gives you
that functionality with STinG. Better still, you can include any Unix host
into the shared filesystems, if you got any Unix (Linux ?) systems sitting
there.

Not as convenient, but allowing similar things, is running an ftp server
on each machine. That can be done already.

> So far I have had Med net
> hooked up and used STing on the 520ST at the same time, however after a
> few minutes STing will crash. Although I have not set up the midi settings
> in STing, I do have the MIDI STX loaded on bootup even though I don't currently
> need it, could this cause the conflict?

Unlikely, since the MIDI.STX does not contain much ATM. You can safely throw
it away. Handling a single machine at the far end of a Midi cable is done
by the SERIAL.STX.

> Can I get both Computers on the internet at the same time, with the one modem?
> This is what I want to do. Greedy aren't I. I thought I had briefly seen a

> post with this regard earlier in the month.

It's possible with Masquerading. But get your LAN working first, before moving on to that.

> So, bottom line is two computers sharing one HD, and two computers networked
> together for all that general networking stuff, and finally any of the two
> computers to be able to access a single modem, from anywhere in the localnet
> whether at the same time or not. Lastly is there a limitation with STing
> as to howmany computers I can network through midi connections. Most other
> programs limit it to 2. If this answer is in the documents forgive me:-).

With the SERIAL.STX, the limit is two, as the Midi port is treated as a single serial port. The MIDI.STX is intented to enhance this number to something like 16 or 32, but as I wrote above, a lot is still missing there.

I don't know if anyone has mentioned this before, but Don Thomas (you know the guy that supported Atarians on the net through online mags, CompuServe, & GEnie) has a new web site. The web site really provides a lot of information on the history of video games and computers. There is A LOT of Atari information on it. The web site isn't eye-popping, but the information is invaluable. You will get a kick out of reading the history. I spent a couple of hours on the web site and it is obvious it took months, maybe years? to compile all of this information.

I'm told that he will keep the web site up as long as there is interest so spread the word for people to check it out.

The web site page is: http://www.l4software.com/icwhen/

47. Atari history on Don Thomas' web site

Newsgroup: comp.sys.atari.st
Date: 1998-01-01 00:00:00 UTC
From: aa399@cleveland.Freenet.Edu
Message-ID: <68epdk$7uk$1@alexander.INS.CWRU.Edu>
Source record: 110765

You all remember Don Thomas, don't you? He was the guy that
allowed Atarians to get Atari news through the net for years.
He has put together a history of computers and video games web site.
It is a very good web site. Highly informative. Of course, it
favors Atari (with Don, would you expect less?), so it makes it
even more better for all Atari users to check it out.

The web site is: http://www.l4software.com/icwhen/

Now, if you go there, you will soon realize that it probably took
him months, maybe years to compile this information. I went there
and checked out the web site. It took me 2 hours just to go
through some of it. And I'll tell you, it was one of the most
interesting places on the net that I've been to. It actually has
more information than eye-popping pictures!

There is something called virtual gaming cards that is also cute
to check out. A lot of the cards are Atari related. They have even
an Atari birthday cake there!

Anyways, the web site again is: http://www.l4software.com/icwhen/

The reason I'm posting information about this web site is that I heard
he will only keep it up as long as there is interest so I'm trying
to get the word out. You may want to pass along this web site address
to others to help get the word out again.

I think it is a nice tribute to Atari users since we were a great part
of history as you will see.

Len

48. Problems With Newsie .84 HELP!

Newsgroup: comp.sys.atari.st
Date: 1998-01-01 00:00:00 UTC
From: warpstar@dls.net
Message-ID: <68erqtpc1@news.dls.net>
Source record: 110766

I can't figure out how to read multiple messages in a thread with Newsie .84! The window with the list of all of the messages in the Newsgroup shows a plus symbol next to any message that has followups to it. But, when I click on it, only the first message in that thread shows up in my editor. Also, if there are more than 1 followup in a thread, that is not shown by Newsie, just a plus symbol with no number next to it. So, are multiple messages in a thread implimented in Newsie?

Please respond via email or with a new message, so I can read the reply.

Also, are there any other News clients which can be used with STing?

I tried to use Telnet 2.02 with the Unix Shell and TIN, but that is also hosed. I can read messages, but not post. I don't know yet if its the fault of Telnet 2.02 or of my ISP.

Thanks

Jason (Warpstar) Damisch

>Could anybody volunteer specifics as to what programs won't work with Geneva
>or MagiC? I have Geneva 6 and am experiencing some quirky kind of problems

Titus,

I have both Geneva/Neodesk and MagiC 4/Magicdesk on my TT. I find that use MagiC alot more than Geneva. The basic reason is it seems to handle memory allocation better than Geneva. This should, I guess, be expected as Geneva is sitting on top of TOS 3.06 (on my TT) while MagiC replaces most of TOS during boot up. Geneva does seem to handle older programs better and the Geneva/Neodesk combination provides a lot nicer, IMO, interface. MagiC, OTOH, does allow a much easier and faster way of shutting down an application that misbehaves and seems a little faster with some operations, esp. those that require intensive memory usage.

I downloaded a demo version of Papyrus not to long ago and found it almost unuseable on my TT under Magic or Geneva. I was thinking of getting it for my son who in his second year of college. Screen redraws were weird, picture display (ie., jpegs, tiffs took forever) and over all placement of text/pictures/graphics were all screwed up. This may have been do to the fact that I have a Nova board on my TT, but an application like Papyrus should be able to handle this!

I wound up loading AtariWorks and PageStream on his TT :).

The latest version of MagiC seems to work with the Falcon. Like most Atari computers the Falcon had ongoing changes during production. Your best bet would be to contact Alex at ATY Computers (Oakland, CA) / Chris at Computer Direct (Canada) for more information regarding Falcons and upgrades necessary to make them stable.

56. Extendos Pro with MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-01-01 00:00:00 UTC
From: Alan Price <aprice@postern.demon.co.uk>
Message-ID: <7Wx1ZIAOf2q0Ew$S@postern.demon.co.uk>
Source record: 110774

When I run Extendos Pro with MagiC 5, the initialisation is messed up-
the last line, which confirms which device number the CD-ROM drive is
on, appears as a string of random characters, and 'Install devices'
doesn't find the CD-ROM drive. Without MagiC, it works normally. Any
ideas?

I am using a Falcon with Afterburner, Nemesis, Videlity and HDDriver 7,
one internal IDE drive and two external SCSI drives.

I had the same problems on my TT. I changed to MetaDOS instead and it works perfect.

I'm interested in getting a copy of Cubase... if anyone has a copy for sale or knows where I could get one, let me know.

It's funny, I've been using Tiger Cub for years now...

Steve Hammond (shammond@loop.com) wrote:

: Titus,

: I have both Geneva/Neodesk and MagiC 4/Magicdesk on my TT. I find that
: use MagiC alot more than Geneva. The basic reason is it seems to handle
: memory allocation better than Geneva. This should, I guess, be expected
: as Geneva is sitting on top of TOS 3.06 (on my TT) while MagiC replaces
: most of TOS during boot up. Geneva does seem to handle older programs
: better and the Geneva/Neodesk combination provides a lot nicer, IMO,
: interface. MagiC, OTOH, does allow a much easier and faster way of
: shutting down an application that misbehaves and seems a little faster
: with some operations, esp. those that require intensive memory usage.

: I downloaded a demo version of Papyrus not to long ago and found it
: almost unuseable on my TT under Magic or Geneva. I was thinking of
: getting it for my son who in his second year of college. Screen redraws
: were weird, picture display (ie., jpegs, tiffs took forever) and over
: all placement of text/pictures/graphics were all screwed up. This may
: have been do to the fact that I have a Nova board on my TT, but an
: application like Papyrus should be able to handle this!

: I wound up loading AtariWorks and PageStream on his TT :).

: The latest version of MagiC seems to work with the Falcon. Like most
: Atari computers the Falcon had ongoing changes during production. Your
: best bet would be to contact Alex at ATY Computers (Oakland, CA) / Chris
: at Computer Direct (Canada) for more information regarding Falcons and
: upgrades necessary to make them stable.

Steve & Titus,

I when back and checked the functionality of Papyrus 4.25 under Geneva,
NeoDesk 4 without MiNT. Everything works fine using SpeedoGDOS 5.0c (even
though this GDOS has memory problems it is best to get v5.7). EXTEND.SYS
is the key to using Papyrus be sure after setting it up you save the font
settings in Papyrus also to ensure the same EXTEND.SYS between GDOS and
Papyrus is also used with MagiC and Geneva.

There are some options in Papyrus that must be set for use with any
form of GDOS. Hint, take a very long detailed look at the Manual and
the readme files for both your GDOS and Papyrus. There are some special
features you must install to ensure enough memory for printing in the OS.

When using Papyrus, one other thing you may need to address is how
you are loading Geneva. If you are loading Geneva with MiNT then the
the MiNT.CNF will load the GEM.CNF from Geneva's folder.

Geneva needs a GEM.CNF file to be loaded. If you are not using MiNT
then you need to make certain you are loading a GEM.CNF file.
Configuring the loading of a GEM.CNF file is a little more involved
without MiNT.

Because Geneva is loaded from the AUTO folder will look for a GEM.CNF on
the boot drive directory not the Geneva folder.

The question I must ask is are you using X-Boot?

Are you using Geneva without MiNT?

The answers to these questions will help define the type of
configuration strategies that are needed to use.

Hi Terry:
In answer to your question, no, I do not have a web site.
I remember when i used to get into work early, and log onto your BBS, for all the latest Falcon files, and capture messages from NEST, etc. What a GREAT BBS!!! Then, I couln't connect for a long time, and just assumed the BBS was down. I think I read where you had Falcon problems.
I hope that has been rectified.

Unfortunately, I don't have the time that I had years ago to create animations, and play around with the Atari graphics, but the Falcon is still humming along. I use CAB and STik to surf the internet at home.
I'm really behind the times, in retrospect to the past when between the BBS's and magazines, I always was on the cutting edge of Atari gear.
Now, I don't know much about MAGIC and other desktop programs.
The last physical upgrades to the Falcon was adding 14 megs a year ago and a math coprocessor before that.

Well, glad to hear from you, and good luck with everything and stay well.
Barry

Alan,

ExtenDos Pro works fine with MagiC 4 on my TT. It is a little touchy regarding placement during boot-up. If you are using X-Boot I would suggest turning everthing off, ie a bare system, and see if works then. If it does then start turing on the various system components and see which one is causing the problem. If you find an AUTO prg, a CPX or ACC that is screwing things up, try moving ExtenDos so that it loads before of after the offending app.

If ExtenDos will not work on a bare system with MagiC, I would suggest you get in contact with Roger. He will be more than happy to work with you to find out what is causing the conflict.

I never realised how hard it was to connect external drives (CD Rom, Zips, SyQuest,etc) until I got a PC :)

Regards,

Steve Hammond

All you need is the name of the program, not the full path.

>Any other suggestions?

Change desktop to Thing and use that as the AVSERVER, version 1.20 supports more of the protocol than AVSERVER.APP does, and you also get a very nice desktop.

David

Source record: 110641

Hi All,

My Atari Falcons' Hard Drive has recently suffered a
severe head crash and is now un-useable and needs replacing.

I use my Falcon mainly for Direct to Disk recording and I
was wondering if I could replace the Hard Drive with either
a Zip Drive or Jaz Drive. This would be ideal as I would be
able to use seperate cartridges for seperate compositions.

So, my question is: Are ZIP and/or JAZ Drives fast enough
to be used for eight track direct to disk recording?

I have just received my copy of QUiNCY, and I am itching to
use it.

Any help would be appreciated.

Thanks,

Ben Hills.

78. Re: Spam Bam!

Newsgroup: comp.sys.atari.st
Date: 1998-01-02 00:00:00 UTC
From: strads@tmisnet.com
Message-ID: <34ac8475.4587786@news.tmisnet.com>
Source record: 110646

Spam handling is relatively straightforward...

1. I look at the email's detailed header to determine
the source of the email.

2. Using the WHOIS server at InterNIC, I get the email
addresses of the administrative, technical, and any
other contacts for that domain name. Sometimes, the
addresses go to a different domain name. (Example:
the spam may come from hotmail.com, but the contacts
are at psinet.com)

3. I politely reply to the original sender, plus the
names of all the contacts, plus postmaster@domain.com,
plus abuse@domain.com (for all domains involved) noting
that the unsolicited advertising email "shown below"
is a violation of the Acceptable Use Policy of the
internet, asking them to stop sending me email. It
helps to include a copy of the response from the InterNIC
because it also shows street addresses and telephone
numbers for each contact.

4. Response is usually quick and effective from the
internet service provider, especially when they are
listed as the "technical contact" for the source of the
spam. In one particular case, I received an email from
the president of the company apologizing for the problem
and promising to amend company policy so it wouldn't
happen again. It's been quiet since then.

Enjoy the new year!

-- George Crissman
-- strads@tmisnet.com

Oh, yeah ... you can find the InterNIC WHOIS server via my
web page (approximately halfway down the page):

I have an STE running Tos that I am trying to use STinG and CAB with.
Sting is working and CAb works when I am offline. How am I supposed to configure the overlay to work with CAB. The file you download is CAB_JPEG.OVL, and everyone is talking about CAB.OVL. Must I be able to program in C, or has someone already done it?
my email address is shall@darkwing.uoregon.edu.
or post here.

Atari itself had a program for that: SAM.ACC. You can connect sounds to system events. It can be found on one of the language disks (if you have a "later" STe, else ask somenody with a Falcon)

Hi All,

My Atari Falcons' Hard Drive has recently suffered a
severe head crash and is now un-useable and needs replacing.

I use my Falcon mainly for Direct to Disk recording and I
was wondering if I could replace the Hard Drive with either
a Zip Drive or Jaz Drive. This would be ideal as I would be
able to use seperate cartridges for seperate compositions.

So, my question is: Are ZIP and/or JAZ Drives fast enough
to be used for eight track direct to disk recording?

I have just received my copy of QUiNCY, and I am itching to
use it.

Any help would be appreciated.

Thanks,

Ben Hills.

Greetings,

I have been out of the Atari scene for awhile, but now I would like to hook up an STE
to an old hard drive and CD-ROM. I have all the hardware and software from my
previous set up on the Falcon, but now I need a Link to get SCSI on the STE.

Can someone direct me to a good place to order one of these or does anyone
have a used one for sale?

Don't read this group very often, but will check follow-ups to this thread. You
can also mail me at hoekstra@airmail.net

Thanks,

Have you tried with a limited setup? (i.e. MagiC only)

I checked AVSERVER with MagiC 4.02, SMU 7 and QED4 (I still use the original MagX Desk). No problem dragging a text file to Start Me Up and than select QED as destination. It is also possible to do multiple load.

My AVSERVER.APP file is in the MagiC START folder and I have added this line to my MAGX.INF file:

#_ENV AVSERVER=AVSERVER

If you have Appline installed, It is also possibile to drag a text file to the QED button..

Regards,

Lodovico

>I also tried AVSERVER=C:\GEMSYS\MAGIC\START\AVSERVER.APP, and that's
>when I get three bombs when loading QED.
>Any other suggestions?

You're aware AVSERVER.APP only works with Magxdesk?
OK - Avserver.app goes to C:\GEMSYS\MAGIC\START\

In Magx.inf, these lines must be there:
#_ENV AVSERVER=AVSERVER
#_APP C:\GEMSYS\MAGIC\START\

If you have any other #_ENV AVSERVER=.... line in your Magx.inf, it
must be deleted or commented out.

Hth.

last year I bought a TT030 with Tos 3.0 2ST & 4TT ram Seagate int.
harddisk and a DD diskdrive.
So I bought a ajax floppy controller
plugged it in and started to install a Sony HD diskdrive type MPF920-E
it didn't work
I tried the following possibillity's:
- used the diskdrive of my falcon (Epson SMD-340-601-04)
didn't work
- used the original DD diskdrive
Ok
- placed the Sony diskdrive in the Falcon
Ok
So what went wrong? or do i have to change some other thing too ?

See, that's the deal. I had no problem with it either, using
Magxdesk. I just can't get it to work with Ease. I really like
Ease, so I'm not going back to Magxdesk. But it would be nice to
work out this problem.

Thanks for your response.

I just paid $60 for Ease. I'm not going to buy another desktop
anytime soon, just to get SMU to pass filenames to QED. And aside
from this minor problem, I'm very happy with Ease and am not looking
for another desktop, ATM.

A lot of people are continuing to use their Atari in Belgium, I'm the proud president of a musician's atari club called MIDI COMEDIE and we are about 30 persons using 1040ST, 1040STE, MegaSTE, MegaSTF, TT030 and Falcons here ....
Go to my belgian links web page and after that just go to the main atari section where you'll find tons of informations and above all the U.T.S.I which was just created after having the big idea: creating a web page from which you can download about everything, every kind of programs made for our computer ... discover that people and programmers are continuing endlessly to develop more programs or even to support old ones !
Around me living in Mouscron near Tournai and Lille (France) I can count a lot of people continuing to use their Atari computer ...
Everybody who loved his first 1040 has continued to buy some second hand atari computers like Mega STE or TT030 or Falcons at very silly prices very very cheaper than the genuine prices at the time they firstly appear on the engorged market !
I even know a guy who has bought 3 SLM804 and 2 TT030 without counting his 1040STF and one MegaST ...
The secretary of our club who is not yet on the net has:
2 1040 STE
1 Mega STE
2 Falcons
2 Jaguars
2 Lynx
1 Portfolio
What do you think about ? It's a real museum when you visit his computer room ... but really "museum" is not the right word to use, because, almost all the time, about 3 or 4 of his computers are SWITCHED ON ... he really USE THEM ! ;)
I'm now the proud owner of a graphic card equiped TT owner what surely wouldn't have been the case when the TT appears on the market ...
I must admit that the prices of second hand Atari computers has certainly contributed to keep atari users on the edge in Belgium ...

I know we are just not the same market as the U.S.A where a lot of people
continue to enjoy using 1040 with mono monitors !

Then, I invit you to visit my whole web site beginning with the main
atari page at:

http://ping4.ping.be/dipching-drulkhor/ATARI.HTM

You also may want to discover my hidden side, then I recommend to
begin with the beginning:

http://ping4.ping.be/dipching-drulkhor/INDEX.HTM

I really hope to hear from you by email, so we will perhaps been
astonished to discover we are not living so far from ourselves !
Belgium is a so little country you know !

Does anyone know what the proper serial port to use for a MegaSTE?
Modem 1, Modem 2 or Serial 2? I have STORM running using Serial 2 at
19200, but I don't remember why I used Serial 2 and not Modem 1 or 2.

I want to run STik at a higher baudrate or STing at a higher baud rate
using CAB 1.5. Documentation is real difficult to understand as I am not
a programmer.

I did get STik (Serial 2 at 19200) and CAB working correctly as I was
actually able to load a web page off the 'net using slirp (a unix shell
slip emulator). I don't think CAB1.5 can do PPP. I have been unable to
get STing working, but I don't really understand all the documentation
about how to set it up for the MegaSTE.

Thanks,
John Norton

>It would nice to know about them.

Hoi Evert,

You're not the only Atarian left in Belgium you know. There are still quite a few of them. There are even a couple Atari-clubs left. For instance A4 -Deinze (100% Atari), C&T -Hoboken (pc and Atari) and Midi Com�die -Moeskroen (pc and Atari, midi only) to name just the most important clubs. I think, but I'm not sure of this, there will be an Atari show later on this year organised by A4. So you see the Atari scene in Belgium isn't dead yet.

Groetjes

I just got Sting working using PPP on CompuServe with the help of a user.
I've also connected with Sting thru a local BBS/ISP provider using Cslip.

Stik 1.12 is faster and smoother. I'll need to figure out what to change
in the Default.cfg and Dial.scr in Sting to get it working as good Stik 1.12.

You're probably missing the HD cookie or switch setting to enable the
HD. Don't know which or both.

Hi and a Happy New Year to you :)

>Is there anyone, who know what kind of interface I need for a Mustek
>ScanExpress 6000 P ? And what kind software ?
>In the specification it says. Interface : EPP .

If you need an EPP interface, it means that it's supposed to be connected to
the printer port of a PC and that means it's unusable on an Atari machine.
To be able to use a scanner on the Atari, you need a SCSI connection and the
right driver software. I've tested the NOVA scannerdriver for Mustek from
Computer Insel, but it seems like it can't handle the new models - only old
ones. Maybe it's been updated, but I'm not sure...
I believe some other company has scanner drivers for Mustek and Microtek,
but unfortunately I can't recall who for the moment :(Maybe it was Homa
in Canada?

Good luck and Best regards,
Claes

I use EASE, and that's the first thing I tried, and is what led to this thread. :^)

Using Ease, and trying to load a text file into QED from SMU, QED gets loaded, but not the text file. Apparently, Ease doesn't fully support the AV protocol. Using another desktop is not an option, ATM, so I'm looking for other solutions.

Thanks and Happy New Year.

```
Midi songs can be mixed with any midi sequencer. However, you might be
thinking about mixing audio. The ST is not powerful enough for that,
although Zero-X should be able to merge 2 audio samples. You would really
need a Falcon. There's plenty of digital audio software for that.

No, you need a double-sided drive mechanism. A PC one will be fine. Check
out the Quick FAQ, there is a link to Hallvard Tangeraas' homepage where
there is a description of such a modification.

AFAIK it's v 2.2.0 and you can find it at ftp.funet.fi
pub/atari/mint/network/ppp-2.2.0e.mint-pl1.tar.gz

It is also available at 193.190.205.13 archive/atari/incoming. This
site is however down for the moment.
hope this help

Hey! Rick Hayward <rick.hayward@zetnet.co.uk> wasn't it Fri, 2 Jan 1998 16:04:36 GMT that you wrote:

>Can anyone actually give me a good reason why you shouldn't
>download old ST games that you can't buy anymore? Seems to me

Yes I can give you TWO perfectly good reasons that have nothing to do with loyalty, the law or being a goody goody,

>its like getting someone arested for stealing from a refuse tip.

See the main problem is making your decision BEFORE you gave me a chance to answer ? :(

1) If you take messages from this newsgroup for a week or so.. You will see a lot of ATARI folk who bought and own legal software, they have a right to resell that software, There are ATARI public domain libraries who after supporting the platform for many years, are now trying to add selling legal second hand copies of games to there titles....all these people will be effected if the same software is offered for free download...
If you buy a car..you have the right to sell it even if its years old.. same with a table and chairs.. same with everything.. yes even that old ATARI game you paid forty quid for many moons ago.. they have the right... pirates take that right away

and....

2) I spend a LOT of time.. not a couple of hours... a lot of time every day making games for the ATARI ST.. what chance have I of competeing with commercial games.. even old one, they are still profesionaly made and better than what I can do.. someone surfing the net who has a choice of Lemmings or Zool.. will download them not my PD stuff... why should I or any other programmer have to compete with a flood of commercial games ?

To add.....I have seen many posts like yours... all ask the same question.. and then start harping on about emulation and images.. you asked about ST games in an ATARI newsgroup.. therefore I presume you are not talking about IMAGES for an IBM computer ? as thats another story and a different question isn't it..

If you havent already decided on an answer before reading mine.. then please do respond and let me know what you think of point 1 and 2 as above :)

Cheers...

There is one but I can't remember its name. Its the one where you say
how much bigger than the norm the width and height of the desktop
should be then reboot. It doesn't actually emulate another screen mode
- it simply tells Gem the desktop is bigger than it is and scrolls the
screen around the virtual desktop.

143. Re: Geneva vs MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-01-03 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <BdZkiN9.greg_evans@delphi.com>
Source record: 110563

The error message when you cut or copy in Papyrus, or qed and other programs for that matter are a known bug in Geneva 006 which will be fixed, according to Dan Wilga (author). I haven't tried the spell-chceker to know about the crashes.

Until I added an Afterburner I ran both Geneva and MagiC. Mostly Geneva, but I was testing/playing with MagiC. I found Geneva more compatible with older programs and MagiC more compatible with some of the newer applications -- that may because programmers are working around known bugs in Magic -- for example, a bug in some menu objects, which means they'll run under MagiC but not under Geneva.

Hi there,

>last year I bought a TT030 with Tos 3.0 2ST & 4TT ram Seagate int.
>harddisk and a DD diskdrive.
>So I bought a ajax floppy controller
>plugged it in and started to install a Sony HD diskdrive type MPF920-E
>it didn't work

>So what went wrong? or do i have to change some other thing too ?

One possibility is that you didn't change the Drive Select to 0 instead of 1
(1 is the default and the setting that's used for the A: drive on PC's).
Besides, to use a PC-drive, you probably need to turn the flat cable the
"wrong" way around, since the interface card is different between PC and
Atari drives.
On Mega STe's, you have to change a dipswitch setting - I don't remember if
that's the case with the TT as well, but I wouldn't be surprised if it is...
I believe it's switch no 7 on the Mega, so it's probably the same on the TT.
I don't have the schematics at hand now, but if needed, I can check them out
at work on monday - just send me a mail if you can't find out what to do.

>My Atari Falcons' Hard Drive has recently suffered a
>severe head crash and is now un-useable and needs replacing.

>So, my question is: Are ZIP and/or JAZ Drives fast enough
>to be used for eight track direct to disk recording?

Both the Zip and the Jaz can be used with Cubase Audio - I've tested them
myself. The Zip manages to replay 6 tracks before CAF says "HD too slow",
but the Jaz works perfectly with all 8.
You can find more CAF-compatible HD's (as well as a lot of other useful
information) on my web page.

>
>Piece of cake isn't it?

Well well well.

Just my two cents:

1) Get a command line shell and start using it. After some time, you
will wonder how you managed your machine before :-) Get something which
is nicely integrated into a GEM environment, like Gemini.

2) Martin is wrong, GZIP is perfectly capable of de-compressing files
(yes, it decompresses files which have been produced by compress).

3) To make things worse, there is GNU ZIP and there is GZIP. Both things
are completely different. GNU ZIP is something like ST-ZIP or PKZIP (an
archiving/compression tool), while GZIP is a compressor just like
the original Unix 'compress' or 'pack' commands. If the file has the
extension "z", "Z" or "gz", GZIP should be able to decompress it.

4) If your version of gzip refuses to decompress something although
you passed the full filename, try to rename it. AFAIR, there are old versions
of gzip which really require the extension to be either "z" or "gz" (try
both).

Hope this helps, Julian

150. Falcon System For Sale

Newsgroup: comp.sys.atari.st
Date: 1998-01-03 00:00:00 UTC
From: "Daniel W. McAndrew" <mcandrdw@toad.net>
Message-ID: <34ae797f.0@news2.kcdata.com>
Source record: 110570

If anyone is (or knows someone) interested, I have a Falcon with maximum memory with tons of productive software (and their books) for sale. The only thing(s) lacking which would make this a total system is a printer and a scanner.

Should anyone be seriously interested to make an offer, please contact me at mcandrdw@toad.net I would be happy to forward a complete list of hardware and software involved. To do that here would make for a rather long post.

For whatever reason, this is a completely functioning system. There is nothing wrong with it. I just can't afford two systems anymore. And if it's important to you, I live in Maryland, USA - for those that live on the same continent.

Ciao.

Daniel McAndrew

Sure, but then you have to work for it... My way involves an initial call
of maybe 4-5 minutes, then a 2 minute call only once a month to qualify.

Do the math... :)

>that pops up,anyone know what this is?,
>please let me know,

>E-mail me,

Rob, I don't have either of those games but I do have the demo's. I ran both SubStations and Obsessions demos and they worked fine. The only thing I noticed was that in Obsession, the ball itself gets a flickery look when running in Nemesis -HI-. It is barely noticeable in Nemesis -LO-, and works just fine with Nemesis turned off... I've not found any games yet that do not work with Nemesis. (I'm sure there are probably a few, but I've not found any of mine) Sounds like you've got another problem besides Nemesis!

Also, most games do run faster with Nemesis (as well as demos! try Avena's Sonoluminesense and it flies!) Ishar 3 feels much faster with Nemesis and other games/demos benefit as well...Compatibility is really, really good.

%>>off, STiNG and CAB 1.5, and you know the rest:).

%> Well, you must be cheating :) Are you using a shell account or a proxy
%> server? CABv1.5, graphics or not, shouldn't be able to connect properly
%> to a server using HTTP1.1 protocol.

%No server should refuse to serve clients that aren't capable of HTTP 1.1
%except for policy reasons. Apart from that, few servers would actually see
%that CAB.OVL isn't up to 1.1 yet, as apparently the latest CAB.OVLs imple-
%ment almost all 1.1 extensions. Of course they can examine the id string,
%but if they do it, it must be considered the policy of the operator :-/

Unfortunately, there are some servers that incorrectly require HTTP 1.1
behavior, even from HTTP 1.0 clients. On the flip side, there are also
servers (like recent NCSA servers) that break when given an HTTP 1.1
request. Even if you follow all the rules precisely, you can't win. (The
MiNTnet overlay kludges around all of the broken servers I've discovered
so far.)

%Apart from all that, please note that CAB got little to do with HTTP.

Good point.

No, there's nothing wrong in trying to save a metafile.

> The GEM files I save don't appear to work with my prg that load gem files.
> It will load the file but display all the text as a single line
> overwriting itself and numerous other unwanted things.

Yes, this is a problem. Many programs can't handle metafiles
which contain more than one page.

> So if I am correct there is no standard GDOS output for Cab?

GDOS is the standard output for CAB. You can "print" to all GDOS
devices (printers, metafiles, IMG-files,...).

> Are the Metafiles NVDI specific?

No, these are not NVDI specific.

> why I might not be able to print straight from Cab using GDOS, but I
> thought I should be able to save as a metafile?

You can save it as metafile. But as I mentioned above, many programs
can't handle multipage metafiles.

The Epson 400 is a Windows only printer, I think the Epson 300 is also
just a Windows printer so you have to be careful even when buying an Epson
printer that it supports the Epson codes.

Whatever you do don't go for the Epson Stylus 400 as it is a windows
only printer. I think the 300 is as well.

I recently bought a Canon 4200 inkjet printer and am very happy with
the results so far.

>In the specification it says. Interface : EPP .

Hi there,

the ScanExpress 600/6000/12000 is a nice flatbedscanner from Mustek.
However it's ONLY intended for use on the parallelport and AFAIK it can't be
used on any TOS based computers.
If you're going for Mustek then have a look at 600/800 II CD/SP which you can
connect to via SCSI on the Hades/TT/Falcon or a Link if you run a ST/STe.
ComputerInsel has made a driver for these as well as for the HP ScanJet which
is called NovaScan (former Mustek scannerdriver/HP scannerdriver).

Greetings, janne

Hi Mike,

The ovl's at Dan's site: baldrick@netset.com. I don't know if it'll
work with 1.5 tho. I guess you'll know soon enough if you D/L it. :)
I had a bitch of a time D/Ling it with Cab 2.5 and the previous ver
ovl. Finally Charles Silver said to use the browser in Newsie and I
got it just fine. Happy New Year pal. See ya.

So did I, with same result on my TT. After placing AVSERVER.APP in
the C:\GEMSYS\MAGIC\START folder I eventually tried in MAGX.INF:

```
#_ENV AVSERVER=MAGXDESK
...
#_APP C:\GEMSYS\MAGIC\START\
```

It works (with MagiC 5.11)
Good luck!
Charles.

>
>I am using a Falcon with Afterburner, Nemesis, Videlity and HDDriver 7,
>one internal IDE drive and two external SCSI drives.

Using a TT, not Falcon, here's my current CFG file, if it helps:

*BOS, D:\DESK\EXTENDOS\CD.BOS T=200 L=48, Z:11
*DOS, D:\DESK\EXTENDOS\UNIDRIVE.DOS P=12 B=4 R/W, T:Z

Be sure to have the latest version 2.4a or is it now b for MagiC.
I only activate ExtendOS from the desk when I require it, but this
Cfg works on boot-up too. So this file must be in the AUTO folder,
where you might have EXTENDOS.PR(X/G), even if the program is usually
activated from a different place.
Does the author still support it, anyone? The Firm has stopped
supporting Atari, I read somewhere.

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of Linux, a UNIX-like operating system
distributed under the terms of the Free Software Foundation's GNU
General Public License, to computers using the Motorola 68020, 68030,
68040 and 68060 CPUs. Current releases support Amiga, Atari and
Motorola VME systems (MVME 147, 162, 166 and 167); porting efforts are
underway to the Apple Macintosh and various 680x0-based workstations
(at present, the HP 9000/300 series, HP/Apollo Domain series, NeXT and
Sun 3 series). Efforts to port Linux/m68k to other 680x0-based
systems are also encouraged.

The current, complete FAQ is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (Master site)
http://www.clark.net/pub/lawrencc/linux/faq/faq.html (Primary mirror)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html
http://amiga.nvg.ntnu.no/linux/mirrors/lawrencc/faq/faq.html

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/
ftp://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/
ftp://tsx-11.mit.edu/pub/linux/680x0/FAQ/ (and all tsx-11 mirrors)

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en francais. On peut le retrouver

What version of Magic are you using ver 5x is an avserver.

set the info file as thus to make magixdesk an avserver. The program
is only needed for MagiC4 in the docs.

> So what went wrong? or do i have to change some other thing too ?

Others may have already posted answers regarding "dip switch" and "drive select/jumper", however, one thing does ring bells:

You say you have "Tos 3.0". I presume that means 3.00 or 3.01.

The first TT's could not handle a high density disc drive. (TOS 3.0 and 3.01 couldn't recognise/format such a drive)

The first TT TOS version that could use a HD disc drive was 3.05.

TOS 3.06 also has this capability.

Sidenote for non-TT owners:

From what I've been told, the Mega STE TOS (2.xx) mirrors TT TOS in this regard - TOS 2.05 was the first to recognise/format/use a high density drive (TOS 2 before 2.05 couldn't). I don't recall seeing any Mega STEs with high density disc drives fitted to them from the factory.

(I'm ready to be proven wrong by a hardware guru - I'm a software person)

--

All email sent to my inca address will fail, however I can now be contacted via an intermediary : gem at tos pl net. I would like to apologise to the genuine respondents that this may inconvenience.

172. Re: Atari ST 16 ch fader control

> "fadermaster", there maybe others i'm not sure but i'm interested, thanx.

There is an ACC called Midimix that can send midi volume changes (and
other CC's too) to a midi device. Might not be exactly what you are
looking for but thought you should know. Its shareware.

Happy Festivus,
Dave

177. TT Joystick

Newsgroup: comp.sys.atari.st
Date: 1998-01-04 00:00:00 UTC
From: <>
Message-ID: <34b38041.2313674@news.zetnet.co.uk>
Source record: 110588

Is there a TT owner out there that has a Joystick tester,
Is there a TT owner that has anyhting that uses a joystick..game or ?

If you have a (not too big) file that will tell us if a joystick is
actualy working, then please dont send.. but get in touch (i dont want
half a dozen<g>) and we will arrange something...

I know the majority of TT users dont touch games... but some do.. I
can't support the machine without the machine owners help :))

Fanx

: > So I bought a ajax floppy controller
: > plugged it in and started to install a Sony HD diskdrive type MPF920-E
: > it didn't work
: > So what went wrong? or do i have to change some other thing too ?

: The first TT's could not handle a high density disc drive. (TOS 3.0 and
: 3.01 couldn't recognise/format such a drive)

My TT started with TOS 3.01 and it could handle HD-disks after changing
the hardware to Ajax controller and HD-floppy drive. - It just needed a
little kick to cope with it (perhaps additional software like the Kobold
helped as well, but I never tested it with a completely naked system).
When booting up, it usually didn't find the floppy drives and icons A: and
B: didn't appear on the desktop. After performing a warmboot the floppy
drive was found and ready to access. (This has to be done even with Magic
installed!)
So my TT needed during bootup procedure even two additional warmboots, a
manual one to find the A-drive and one to get rid of the TOS 3.01 to
replace it with MagiC. After changing the TOS-ROMs to 3.06 things were
settled perfectly.

: TOS 3.06 also has this capability.

So even if it is possible to use TOS 3.01 with HD-floppies, it might be a
little bit more convenient to update the TOS-version. ;-)

Bye,

Kerstin

I still don't know why I have problems without HSModem. It doesn't matter
much anyway, since I need MIDI.PRG to do the LAN I'm still trying to get
working.

I don't think it would work anyway, since when I saved the config, quit
and then restarted aFTP, the FTP window opens on the left of the screen,
no matter where it was when the program was quit.

BTW, I'm a bit (read very) upset now because my mono monitor has given up
the ghost and I'm stuck in medium res again. Feels so strange after 8
years working in mono only.

It's quite a change. I like the color of med res, but love the
crispness of mono. I can get used to either one, though.

Relax Nicholas, aren't you running the faq? I might have very well asked the same question when I first got on a newsgroup. Plus this is great to point out all the shareware try before you buy stuff. I just downloaded a 2 year old light cycle game that I just love (Trapped II). Plus there is a ton of games on the net to find. Even just giving him help to use a search engine might be all he needs to get started. I think you may have jumped to conclusions, its not as if he said, hey guys send me some pirated games, and I will trade. Which in the short time I have been here have actually seen people post such ill advised questions.

>
> Well thats not very helpfull to a perfectly valid question ?

I agree.

I was putting in the extender, so I just tried it in both compress and gnu
zip. But that is the stuff I am looking for.

>Piece of cake isn't it?
>

Yes it is, by the way I can't get it to work yet:-). Perhaps the file
got corrupted on the download. I will get some more and try again.
How can I hold the screen for the -d functon? It flashes illegal something
and I can seem to hold the screen to read it. But I believe a list of commands
are being flashed at me as I see the -d. Boy I would love to become TTP
fluent. I guess I shouldn't think about mint yet eh? Its what I want to setup
but I can't seem to handle a simple command line. relax brian:-).

>Hope this help
Not as much as a shell would:-). I know I'll be back to follow up on this.
Thanks Martin.

189. English .RSC's wanted for Atari Gold progs

Newsgroup: comp.sys.atari.st
Date: 1998-01-04 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <68oeeq$5lv$1@roch.zetnet.co.uk>
Source record: 110600

Hi Folks,
Santa arriverd with a copy of Atari Gold for me. It's a CDROM made in Germ,any with full release versions of the following programs on:
E-Backup 1.54
F-Drum
Ganymed
Pix Art Lite 3.34
Papyrus 3
Rainbow Multimedia 1.2
Raystart 2
Script 4
Technobox Drafter
Toxis 5.5
Trilingua
and Substation

This is not a complete list, it's the ones I'm interested in. Basically I need English .RSC's for all of them except Substation, for which I'm looking for cheats, maps etc.....The ones I'm really desperate for are Papyrus, Pixart and Technobox. Any help would be much appreciated, just addresses of where to get them from or URL's or ftp's etc. I only need the .RSC's and maybe a .TXT file of commands and features.

Many thanks

chrisc

190. Animated GIF ... did you know ?

Newsgroup: comp.sys.atari.st
Date: 1998-01-04 00:00:00 UTC
From: dipching@ping.be
Message-ID: <68og32apf1@news3.Belgium.EU.net>
Source record: 110601

Hello,

Did you know it was possible to create animated GIF without using some
TTP programs like Whirlgif ?
I have just downloaded the marvellous EASY_BAT.PRG from Guillaume
Tello which enables to creates a lot of different animations formats
.. and I discovered that the GIF is supported ... Althought,
Guillaume explain to me it was not inetended to make transparent GIf
use, the program should perfectly work to create animated GIF !!!

So, I will give a try one of these days !

Let's download it from the author's page or simply go to the U.T.S.I
"graphics page" wher you'll find EASY_BAT !!!

http://ping4.ping.be/dipching-drulkhor/PRG-GRAP.HTM

Note: it's a pity to discover EASY_BAT today because it already
existed six months ago on Guillaume's web site , thought it was on a
"hidden page" ... now it's on the index page

Source record: 110602

There's several MIDI controlled mixers that would work with this to give you MIDI controlled analogue mixing. Akai did one, Simmons did one, Fostex did one and I believe that MOTU did one too. THe Fostex one was expandable as the MIXTAB controller could handle up to three of the 8/2 1U rackmount mixers. The MIXTAB could also send out the MIDI messages it used to control the mixers to a sequencer so that they could be automated once muting decisions had been made. Useful if you need to run your mutes and FX Send levels around during a set, It wouldn't be too hard to do a Cubase mixer map for it unless it uses checksums like my JD800 does...

I'm afraid APEX 3 (APEX Alpha) will never be released. I'm a beta tester of it and it was months since I received an update of it from Douglas Little / BSS. He was the main programmer of it and it seems like he more or less has dissapeared completely. Haven't heard much from him since he got the job as a 3d programmer at some PC software company. It's really sad as APEX Alpha really look very promising.

Take care,
Daniel Hedberg

It exists a demo of APEX ALPHA on the TITAN web page and it is linked
on the U.T.S.I .... just look at:

: really look very promising.

I'm amazed to hear this. The program must be very close to completion,
they've had a working demo of it for ages. How much could be left to do
on it?

Of course, finding another DSP programmer, even for an almost completed
project that has at least as much commercial potential as anything in the
Falcon market can have, will be like finding a hen's tooth.

I hope the Bad Mood guys are past the DSP stage and can finish that
project up on their own, although this might also explain the slugishness
in that arena as well.

If Doug Little is out of the Falcon arena, this is a major blow to the
userbase.

Use TOS2GEM (from autofolder). TOS2GEM redirect the output to a window
so you can see what happended.
Try this. Drag a small file to the compress.ttp. It will become a
compressed file (.Z extensions).
Start compress.ttp once more and typ
-d name_of_file_you_just_have_compressed_without_the_extension

I should work

Try the Internet.....doh!

If you actualy READ this newsgroup as well as post to it, you will see there is a thread at the moment all about the TOS INDEX..

Why not LOOK for the software instead,.. You have a web browser, you have a search engine and you have this newsgroup.... use them :)

Consider yer hands slapped........hehehehe

BTW as most software is made to include Falcon compatability these days then you just limited your search to less than nothing ?...Maybe you should have said you dont have a falcon so not Falcon specific ?

For once Tony I can't find anything in one of your postings to argue about!

The surviving Atari market can only be harmed by piracy. There's loads of
cheap but good old commercial games software around.

If you need a TOS image then place an advert in your local paper and pick
up a REAL basic ST machine for 25 quid. You'll probably get a load of games
thrown in as well!

Best regards
Mike Kerslake

From: michael brown <mbrown@kih.net>
Message-ID: <34B0297B.182A@kih.net>
Source record: 110614

I have an okidata ol400e printer that I wanna use to print my cubase parts on. The only drivers in cubase that come close to working are the hp drivers and they all print too large for the page, leaving off lines of music at the bottom.

wait a minute, :>) I have worked with the margins.

Can I be missing something in the cubase manual about making its printing smaller?

thanks!

: >switch and 2 wires,.but i'm forget wich pins i need to connect it.
: >
: >
: >If u know please tell me.
: >Thanks

: No, you need a double-sided drive mechanism. A PC one will be fine. Check
: out the Quick FAQ, there is a link to Hallvard Tangeraas' homepage where
: there is a description of such a modification.

Depending on details, it may not be that simple. A single-sided drive
uses a 14-pin connector, and a double-sided uses a 34 pin-connector.

If so, a connector that fits will be needed, and the wires should go as
follows:
1 to 8
2 to 18
3 to 20
4 to 22
5 to 24
6 to 10
9 to 32
10 to 16
11 to all odd pins on the 34-pin connector
12 to 26
13 to 28
14 to 30

> Modem 1, Modem 2 or Serial 2? I have STORM running using Serial 2 at
> 19200, but I don't remember why I used Serial 2 and not Modem 1 or 2.

You can use any one of the ports. For higher baudrates, you should use
either Modem 2 or Serial 2. IIRC Serial 2 lacks some lines, so Modem 2
is preferable.

> I did get STik (Serial 2 at 19200) and CAB working correctly as I was
> actually able to load a web page off the 'net using slirp (a unix shell
> slip emulator). I don't think CAB1.5 can do PPP. I have been unable to

It's not CAB's business to support SLIP, SLIRP or PPP, that is done by
the TCP/IP stack (STiK or STinG). STiK supports SLIP or SLIRP (no CSLIP),
but STinG supports all of them (including PPP).

209. POPwatch 2.42 released

Newsgroup: comp.sys.atari.st
Date: 1998-01-04 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <78616451_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 110620
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of POPwatch is 2.42 and is available from my web site.

The changes since 2.41 are as follows:

*Problem with NOS format retrieval fixed. POPwatch used to give GEMDOS
error -36 on HISTORY file whenever connecting and retrieving email on
all but the first attempt.

*Copying my URL and Email address to the clipboard from the About
window now actually works! Select whichever address is required and
press CTRL C or CTRL Insrt.

*Should no longer crash inexplicably when the Verbose window is open.

*Resources from v2.41 will work with this version also.

Also available are the Swedish RSC's, kindly translated by Mille Babic.

Regards,
Gary

> #_APP C:\GEMSYS\MAGIC\START\
If you have AVSERVER=MAGXDESK then you don't need AVSERVER.APP any more
because this program won't get any AV-messages (Magxdesk will get them).
BTW: Magxdesk is the best and easiest desktop I've ever seen! :-)

It's not. Where did you get that information? All Stylus printers use
Esc/P2, not Windows GDI.

If you don't believe that, take a look at
http://www.epson.com/homeoffice/inkjet/sty400/

> I recently bought a Canon 4200 inkjet printer and am very happy with
> the results so far.
I'm also very pleased with my Stylus 600, though there's currently no
printer driver for the ATARI that allows 1440dpi-output of color images.
I use Win95 for that, with excellent results on special paper.

Ciao

Thomas

215. 520STM+ & Transputer for sale

Newsgroup: comp.sys.atari.st
Date: 1998-01-05 00:00:00 UTC
From: "Adrian St. John" <adrian@realobj.co.uk>
Message-ID: <647778100wnr@realobj.co.uk>
Source record: 110490

Hi,

Due to a lack of time and resources, I am reluctantly getting rid of my
Atari ST.

The specs:

520STM+ (1Mb) with TOS 1 (1.09 I think - first version in ROM)
Dual external 720k floppy drives
40Mb Hard disk (SH204 with replaced drive)
Replacement Atari/Amiga mouse (original Atari mouse around; the left
button is sticky)

Software includes:
1st Word Plus
Dungeon Master
Carrier Command
Super Sprint
Digital Research/ATARI Development kit (original version)

Also going is a K/MAX Transputer development kit, consisting of 1
transputer (T400 w/512Kb) that plugs into ST cartridge port,
cross-assembler, Occam compiler and (if I can find it) documentation.

I am open to offers on all of the above. I will split it up if
necessary to get rid of it.

Regards,

Adrian St. John

Hello

I'm an atari's user and I want to do a data base on the atari's users
in Belgium. I want put it at your disposition, like that, if you have
a problem with a programm, you 'll can call a specialist of this software.
The solution might be find with this phone call. I know all
belgian atari's users have not an internet connexion, then if they want
you can put their name on this list. You must only fill the next note.

Thanks

Luc viatour

No, I can't, since that is not my decision. The current Milan TOS does run
on my TT, and there are plans for a release for the old machines, but I
can't tell what the final decision will be.

The Firm? Do you mean the only lonely programmer Roger Burrows?
yes, he still supports ExtenDOS AFAIK.

-> sampler, and it will read just about every kind of file out there.

-> Problem is that it will recognize PC and MAC files only. Any ideas
-> how I can get files off the internet via my Falcon and then get
-> the A3000 to read my Atari created .WAV file?

-> Besides a lot of the .WAV files are .zip and I don't even have
-> the correct .zip program to extract these files. I feel scre-wed.
-> Is there anything I can do, aside from changing platforms?

-> Help

-> Vern in Hawaii!

Yes. There are many shareware programs out there that can read the .WAV format on the Falcon. However I haven't done it yet there is one particular program that you may be interested in. It's called 525E which converts files from one format to another much like images can be done. I'm not sure of the quality of the output of such conversions though. I located the file 525E on the Crawly Crypt CD ROM Volume one in the FALCON\SOUND directory.

As for your ZIP process you might just have to experiment with different ZIP archieve programs. ST-ZIP will unzip some PC ZIPped files.

If your interested I've attempted to attach 525E to this message.

225. Wanted: ST Monochrome Monitor

If you can find a used deal on one, VideoMaster Falcon will work. It will allow you to digitize True Color pics into .TPI format, then you can use TruePaint to convert them to .JPG... I picked up the VideoMaster Falcon software and hardware used for only $50.00! Otherwise, you might be able to buy it from a good Atari dealer. :)

>Does anyone know if Atari Falcon can read .WAV samples?

Yes it can. There is a small shareware program that convert between
different formats.

Get a copy of STZIP.PRG it`ll handle any zip file you can find on the net.

cheers Joergen

The zip can handle up to 6 tracks. The jaz, up to 8. I'll recommend hd-driver which perfectly recognize them both.
Have a look to the URL "http://home5.swipnet.se/~w-51781/", it has a section dedicated to hds for CAF.

Chris,

The only one I know you can get is the English RSC for the demo of Papyrus 3. You may have to dig around to find it, as they are up to version 5.5 now, but it's probably still around.

I have the same CD. If you find any, other than Papyrus, can you post the info here, or email me? I have Papyrus 4, or I'd email you the RSC file myself.

Greg

I am using CAB v2.5 with PPP-Connect. I have the system up and it works great.

What are good programs to use with PPP-Connect so I can use email, newsgroups, ftp and telenet?

A few programs that I have downloaded from the web seem to be set up for something called STiK which I believe is for SLIP connections which my University does not support.

Is there something better than PPP-Connect (that does PPP) what would work with these different internet programs?

Thanks,
Neron

There are almost none. ASH sell an email/news client. And an FTP client
is supplied with CAB 2.6 allegedely. You won't find a Telnet program at all!

>A few programs that I have downloaded from the web seem to be set up for
>something called STiK which I believe is for SLIP connections which my
>University does not support.

Something called STiK? Surely you jest. STiK is *the* most common TCP/IP
stack on the Atari. MiNTnet comes second, with PPP-Connect way down at the
bottom of the list!

STiK does not support anything other than SLIP. STinG is the way forward and
supports SLIP and PPP, and is compatible with all STiK clients.
Ditch PPP-Connect and get hold of a copy of STinG, that's my suggestion.

>Is there something better than PPP-Connect (that does PPP) what would
>work with these different internet programs?

Yep. STinG!!!

Get hold of a copy at:

http://www.stud.uni-hannover.de/~perot/index-e.html

242. Wither Atari Ghostscript?

Newsgroup: comp.sys.atari.st
Date: 1998-01-05 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <hxfHb6H.greg_evans@delphi.com>
Source record: 110517

Can anyone give me the email address of where to find Atari compatible Ghostscript. A previous address I had doesn't work and I'd like to try it for reading PDF files. Has the installation problem ever been corrected in the package? I have an older version from UMICH archives which never worked for me.

Greg

Aargh! Don't panic!

A .WAV file should be the same, whether downloaded onto a Mac, a PC, a
Falcon or a ZX81. You shouldn't have any problem with that.

If you intend to convert other formats to WAV or a WAV to something else,
then a program called 525 should resolve your problem. It's available on
most FTP sites. I'm quite sure I saw it on ftp.lip6.fr or umich. I guess
just about any sample editing program can do it too.

The same goes for .ZIP files by the way. They can be read on most platforms,
including Atari. Look out for STZIP on the same old FTP archives.

File formats are definitely no excuse for changing platforms ;-)

For the moment the Phenix is a paper machine, although Centek keeps on claiming that there will be a prototype presented 'very soon'. It was supposed to be at the Atari Messe or at the Paris show. Last summer it was supposed to be sold by the end of the year.

It seems to me that these guys underestimate the work that is needed to design a new machine, and keep on making big announcements about their new prototype when there is nothing ready yet.

A link to their web site is on Hallvard's page somewhere.

>> thanx.

Peavey make a 16 channel stand alone fader panel that sends MIDI messages on each fader. It's very useful with programmes such as Cubase, but form your message what you are after is something to control the volumes of an analogue mixer. That really means putting something in line with the mixer and the only thing I can think of is a unit made some years ago by Simmonds. It's no longer made but they crop up from time to time in secondhand adds. This is put in the insert points in the mixer and works by creating snapshots, but I don't think you can do continous fades with it - but perhaps someone who has one can tell you more.

251. Printing from CAB

Newsgroup: comp.sys.atari.st
Date: 1998-01-05 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <68pcue$3o4@news2.tds.net>
Source record: 110626

Duh... There Alex goes - giving the info on how to get good results, and I don't even pay attention. Silly me.

Well, I caught the part about changing NVDI to halftone so I did that. I also saw a comment about "monochrome" but didn't realize what he was saying. Anyway, I just unchecked the "monochrome" box in the CAB print dialog, and received *excellent* results with my Hewlett Packard Deskjet 500. I think I had done that once before, for experimentation, but didn't receive satisfactory results (because I hadn't changed my NVDI configuration) - so I kinda thought it meant to leave it checked because I was printing to a monochrome printer. Live and learn!

Ok, here's revision Alpha to Mod 1 - I just realized that I printed
the page from CAB 2.0 Demo - I don't think 1.5 will let me print to a
monochrome printer with monochrome unchecked. Still looking for a way
around it - however, as I said, I did receive *excellent* results
printing from 2.0.

Note the the switch has no meaning except telling the TOS desktop to
display the HD floppy format option in the format dialog box. So it is
only necessary to use this switch if you want to format HD floppies with
the desktop. When using another program for this, you don't have to
change the switch.

From: musicman@pixi.com
Message-ID: <34b0b6d1.0@bonaparte.pixi.com>
Source record: 110631

Does anyone know if Atari Falcon can read .WAV samples?

I have a bit of a predicament...I purchased a very new Yamaha A3000
sampler, and it will read just about every kind of file out there.

Problem is that it will recognize PC and MAC files only. Any ideas
how I can get files off the internet via my Falcon and then get
the A3000 to read my Atari created .WAV file?

Besides a lot of the .WAV files are .zip and I don't even have
the correct .zip program to extract these files. I feel scre-wed.
Is there anything I can do, aside from changing platforms?

261. ST to NEC PC VGA Monitor

Newsgroup: comp.sys.atari.st
Date: 1998-01-05 00:00:00 UTC
From: Sam Kingsbury <samk@cs.man.ac.uk>
Message-ID: <34B0CDB6.41C67EA6@cs.man.ac.uk>
Source record: 110636

Hi all,

I've made a simple `switch box' allowing me to
connect a PC VGA monitor to an ST. It works great
except that the monitor does not display low and
medium resolutions correctly - it seems the monitor
does not get the right scan rate. The monitor
is a common NEC Multisync 2A.

1. Does anybody know if this monitor is
capable of displaying the low and medium res
screens, and if so, how do I make it do it?
2. If not, does anybody know of a monitor
(available cheaply second hand) which does
support ALL the scan rates required?

Cheers,

Sam Kingsbury

Source record: 110637

Wow. Nice write-up. It really startles me that you have almost the EXACT
SAME IDEAS about Atari that I've had or still have.

On your site you ask visitors to tell you something about a weird looking
Portfolio & ST colored ST computer that has a Mega ST-like but
somewhat lifted casing. I don't know for sure, but I've read about a
"Atari ST Box" computer which was essentially an ST and a hardware
based PC emulator in one box. (Perhaps that is why the Portfolio colors
came in). AFAI've read, the project was dropped because Atari had
secretly used IBM patented technology BEFORE the agreement
on the Jaguar & all with IBM, and, as usual, the Tramiels deemed that
there wouldn't be a market for it (just as they did with the Stylus).

Now don't start the share that drugs stuff again - I'm only as reliable
as this source: the official news mag from the official distributor of
Atari products in the Netherlands, Belgium and Luxemborg.
The article stated that it was supposedly developed at the same time
as the Sparrow project (which spawned the Falcon030, Falcon040,
and/or Microbox). The article had btw also a picture of a Microbox
that's VERY different from the MicroFalcon040 piccie on you site...
Hmmm I'm curious........ I'll try to dig up and translate the article for
you
as well as trace its sources, for as far as I have 'access'.

Keep up the good work. Awesome site.

I have had to change to another coomputer system. I no longer use the Atari and so have the following for sale. Let me know what you want and I will box it up and find out how much it will cost to ship and let you know the cost before shipping.

Programs:

$2.00 Shadow by Antic Software - in case and Flash by Antic Software - incase

$15.00 STOS, the Game Creator by Mandarin Software - in box and STOS Compiler by Mandarin Software - in box

$5.00 DC Desktop by Double Click Software

$3.00 Degas Elite by Integral Solutions

$5.00 Stalker 3 by Gribnif Software

$5.00 Data Diet ver. 2 by Trace Technoligies

$2.00 Certificate Maker by Springboard - in box

$5.00 Easydraw w/ Easytools by Migraph - in binder

$20.00 Calamus 1.09n by DMC - in box

$50.00 Calamus SL by DMC - in box

$5.00 Warp 9 by Codeheads

$5.00 Image Cat by Wiz Works

$5.00 Diamond Back 3 by Oregon Research Associates

$5.00 Computer Guide to the Solar System by WinterTech

$2.00 Music Construction Set by Electronic Arts- in folder

$10.00 Datamanager by Timeworks - in box

$10.00 Word Writer ST by Timeworks - in box

($15.00 for both Datamanager and Word Writer ST)

$5.00 Fleet Street Publisher 3.0 by MichTron - in box

$15.00 B.E.S.T. Business Management by Best Software - in box

$3.00 EZ-Score Plus by Hybrid Arts, inc - in folder

$3.00 Silhouette by Maxwell CPU - in folder

$5.00 Multi-Desk Deluxe by Codehead Software - in folder

$10.00 LDW Power spreadsheet by LDW - in box

$20.00 Geneva & NeoDesk 4 by Gribnif Software - in box

$2.00 Border Pack by Migraph

$10.00 SpeedoGDOS 5 by Compo Software

$10.00 Maxifile 3 by Codehead Software

$20.00 AtariWorks by Atari

$5.00 Universal Item Selector 3 by A & D Software

$5.00 GFA Draft Plus 3 by MichTron

Games:

$2.00 Mindshadow by Activision - in folder

$2.00 Bubble Bobble by Taito - in folder

$2.00 Pinball Factory by MichTron Inc.

$5.00 Zany Golf by Electronic Arts - with box

$2.00 Nigel Mansell's Grand Prix by React Software

$2.00 Jug by Microdeal

$2.00 Talespin by Microdeal

$2.00 Tass Times In Tonetown by Activision

$2.00 Kid Gloves by Millennium - in box

$2.00 Sundog, A Frozen Legacy by FTL Games

$2.00 Typhoon Thompson, Search for the Sea Child by Broderbund

$2.00 Harcker II, The Doomsday Papers by Activision

$5.00 Chronoquest by Psygnosis - in box

$3.00 Superbike Challange by Broderbund

$5.00 Lombard Rally by Mandarin Software - in box

$2.00 Purple Saturn Day by Exxos - in box

$5.00 Oh No! More Memmings by Psygnosis -stand alone version in box

$2.00 Terrorpods by Psygnosis - in box

$2.00 Airball by Microdeal - in box

$5.00 Honda RVF by Microplay - in box

$5.00 Captain Blood by Exxos

$2.00 Rogue by Epyx

Hardware:

$50.00 Gemulator 95 with TOS 2.06

$40.00 Seagate 85 meg hard drive with ICD+ adaptor board and software

$10.00 Single-sided external Atari disk drive

$5.00 Internal single-side Atari disk drive

$40.00 Golden Image Hand Scanner with Touch-up software. In box

$25.00 Mega ST keyboard

$25.00 STfm motherboard with Tech-Specialties 4-meg upgrade and TOS 1.04

something might be wrong with disk controller chip.
When you access the drives the screen flickers.

$5.00 Golden Image mouse

$50.00 Atari SC1224 color monitor

Books:

$2.00 ABC's of 1-2-3, release 3

$1.00 Lotus 1-2-3 Instant Reference, release 2.2

$2.00 Turner's Third Book of Atari ST Topics

$2.00 Atari ST Internals by Abacus Software

The Atari is a better machine, but bad management ruined the sales in the
states. I hope that others can use any of the above.

Hi all !
Does anyone know where I can get information about the
signals for the ACSI DMA interface and their function. The only thing
I could find was the pin-out for the port. Thanks heaps

Marcos

269. Re: TOS 6 under development

> GmbH suggestions if Falcon/TT owners canï¿½t use this system.
> Mille Babic

1)Can not Falcon/TT users envision changes/better things for TOS on
their machines? If so, why not suggest them?
2)Will present Falcon/TT users always use Falcon/TT? maybe they will buy
a Milan in the future!
It would be nice though to have maybe the possibility of the Milan TOS
being in seperate sections. like a seperate AES, seperate DOS, etc, that
could be installed on other machines. One hopes that the Milan TOS will
check the hardware of the machines they are running on though! to avoid
problems such as using a TOS4 image on a ST (not exactly the right
hardware, hmmm!)

From: robscha@data.rhein-main.de
Message-ID: <IAGRCEAFUP@data.rhein-main.de>
Source record: 110398

In <67ppjrjpj3@newsbell.bellglobal.com> Brian Van Tilborg wrote:

>Question #2: Has anyone had any experience with lit_net, Med_net or Midi com?

I use MidiCom with two ROMPORT-Modules between two falcons.
(Before a Falcon and one ST)
That works nice up to 160k/sec. and with a maximum wire to 30! meter.
(Only 3 meter by me self)

You have from both machines a full access to any HD or Disk device.
Also Printer ect..

The only mistake, that works only with TWO Atari Machines.
If you have more, you have to use the standart midi wire with 31k/sec.

282. Jet-Set Willy now available for the ST

Newsgroup: comp.sys.atari.st
Date: 1998-01-06 00:00:00 UTC
From: Paul Taylor <paul@penelope.demon.co.uk>
Message-ID: <884127610.12198.0.nnrp-09.c2def412@news.demon.co.uk>
Source record: 110407

The original Atari ST version of Jet-Set Willy, which was shelved by
Software Projects in 1990, is now available on the Internet.

http://www.penelope.demon.co.uk/JETSET.PRG

Or download it from alt.binaries.atari

Controls:
LEFT SHIFT = Left
RIGHT SHIFT = Right
SPACE = Jump
ENTER = Sound on/off
1-5 = Speed

Have fun, it's been gathering dust for nearly a decade. Works nicely with
Pacifist...

THE ORIGINAL SPECTRUM CLASSIC FAITHFULLY REPRODUCED FOR YOUR ST

Since (as I believe anyway) a machine is only outdated when its usefullness to its user runs out, What I would ask the original poster of this is: What would you like to use it for? If you are interrested in the Falcon's Audio capabilities or some other Falcon specific stuff, then definitely get the Falcon. If you are just wanting to go on an Atari nostalgia trip, or just love using the Atari, then you could get a Falcon or other Atari or compatible, or you could get Magic Mac and run the a lot of the software on your Mac MUCH faster than most Atari's (except maybe the newer 060 clones - can't speak for them). As far as software, most of the action is in Shareware/PD, but there still is a decent commercial base as well. With both commercial and shareware, the quality is generally quite good from the stuff I've seen.

>
> http://www.stud.uni-hannover.de/~perot/index-e.html

Excellent time to do so, as I just released another version of STinG !

There is no breathtaking new stuff, instead lots of smaller additions
and improvements. Hence you can expect everything to run a bit neater
and smoother now. Some people reported a fair speed increase ! Again fewer
ISPs will present problems when logging in, and overall configuration is
as easy as never before. All you need to set for your first logins is
the port your modem is connected to, the phone number of your ISP's modem
server, and your account name (so-called "PAP-ID") and password. This
holds if your ISP supports PPP login properly, which is true for maybe
90 % of all ISPs.

An excerpt from the list of improvements :

- PPP DNS option lets PPP fetch the name server's IP addresses automa-
gically.
- Several new tools for listing all STinG system details, or completely
removing STinG without reboot.
- TCP_open and UDP_open extended for BSDism.
- Partially implemented network environment into the Dialer. So all
variables can be specified in DIAL.SCR now instead of editing another
file (DEFAULT.CFG).
- Programming docs virtually completed.
- CompuServe support.
- Many bugfixes ...

Two days after releasing the "New Year Release", I found out why Van Jacob-
son Compression led to trouble for so long. Fixed two bugs, and VJHC works
very well now. It's in MODULE.LZH, independent from the main release.

Cheers Peter

Contact Systems for Tomorrow (www.systemsfortomorrow.com). They should have or be able to get GFA 3.6 for you, the final version released.

Correct.
There's the ASH-EMailer (incudes newsgroups) and
CAB 2.6 (incudes Fiffi, the FTP-client).

Fiffi is still a little bit unstable but all other
programs do work fine.

Many thanks to you all for your replys.

I'm currently thinking of an HP 670c or 690c in the hopes that the
language it speaks will work with an 8 year old HP driver!!

Any further comments welcomed.

BTW, you reckon that Notator will print with an Epson at 720 dpi?

I don't understand what is meant by Esc/P2. The only Epson drivers
with Notator appear to be LX and LQ drivers (at 360). Do you reckon
they'd work with a Stylus? (360 dpi is good enough!)

Ahem,

Sorry guys, think I was talking out my hat (or worse) earlier, or at any rate mixing up my memories of what Calamus drivers I have and what Notator drivers I have.

In fact I just had a look at my master disks and found a whole bunch of Epson drivers including some that appear to be 720dpi, though whether thay'll work with ESC/P2 I have no idea.

The HP drivers include some deskjet 300dpi ones.

I *think* looking at my garbled specs of the 2 HPs I'm interested in (they don't totally agree with each other) that the 670c is Windoze only, but the 690c also does PCL-3, whatever that is!

I'm hoping it means these old drivers will work with it! What do you think?

A second hand Video Master Falcon would be the most economical and
easiest to obtain. As long as you have a good freeze frame camera, it
does decent job, at least as good as the ScreenEye, but not up to
Expose standards.

Mike

297. System for Sale (USA - North TX)

Newsgroup: comp.sys.atari.st
Date: 1998-01-06 00:00:00 UTC
From: michael@fastlane.net
Message-ID: <68sh4r$mkq@news.cybernews.net>
Source record: 110527

Having bought a Falcon, I now have a system for sale:

- Atari Mega STe 4 w/ UK Keyboard: TOS 2.06, No HD, DSDD Disk Drive
- Sang MegaVision300 Graphics card: Up to 1280 x 1024 pixels,
1 MByte VRAM, CLUT for 2/4/16/256 and 16.7 Million colors,
VDI Drivers, in German
- Apollo Mentor Graphics fixed-frequency 19" color monitor: 896 x 832 pixels
off Sang graphics card
- ICD AdSCSI+ in ICD FA-ST hard drive case with 245 MByte Maxtor hard drive
- SLM 605: Less than 500 pages on original drum, like new, with drivers
- Viper SCSI 2150 Tape Drive - In case with power supply, comes with 20+
150 MByte tapes
- External 4-bay SCSI case for CDROMs/Hard Drives

Comes with the following software:

- Installed KGMD/PPP MintNet/Minix/MultiTOS/GlueSTiK Package. Includes
compiler and man page installation. Updated with latest PPP Daemon and
network drivers.
- SpeedoGDOS 5
- Beckemeyer Development Hard Disk Toolkit + SCSI Tape Kit
- ICD's CleanupST
- A bunch of freeware/shareware on the drive (e.g. CAB 1.5, NEWSie,
AtariIRC, etc...)

I'd like to sell the above as a package for $600. If I do not receive
any reasonable offers on the package, I will break up the package and
re-advertise each item separately.

The following additional software, etc... is also for sale:

- Prospero C v1.155, four volume set - $20
- Prospero Pascal v2.165, three volume set - $15
- Atari Compendium - $20
- Atari Devlopment kit w/out disks - $15

All items are in excellent shape. Many items come with their
original boxes (printer, Mega, tape drive, hard drive, software).

Due to the weight of the system (the monitor alone weighs 70 pounds),
I'd like the buyer to be local here in North Texas for the system
(or be willing to pick it up). If someone is -really- interested
in shipping, I will check into the shipping costs.

You can contact me via phone at (817) 847-1909 or via email for
questios or offers.

Bonjour Manu,

I hope you have a large storage capacity for your Web page :) In the USA there are at least 4000+ ISP's. Most of which use a different logon script ;) There is no easy way unless you get an ISP that someone already has connected to successfully. Good idea though... Just hard to implement here in the USA.

>File formats are definitely no excuse for changing platforms ;-)

If I read his original post correctly, I think he was having trouble with certain ZIP archives. I've run into a few that ST-ZIP choked on, too. WinZIP handled 'em fine, though. At that time, I tried a TTP-based ZIP archiver (can't remember its name) with better results than ST-ZIP, but some ZIPs simply wouldn't decompress correctly on the Atari... proprietary formats I guess.

It's just that I can't imagine an Atari user not knowing of ST-ZIP. But that could be the case.

The TCP/IP immplementation of PPP-Connect will not allow connection of the usual clients such as Newsie, Antmail, CAB.OVL (from Dan Ackermann). You have to get clients sold by ASH. I believe the e-mail, newsgroup, ftp client, Fifi, is now available in Germany.

>A few programs that I have downloaded from the web seem to be set up for
>something called STiK which I believe is for SLIP connections which my
>University does not support.

Yes, most shareware/freeware clients are programmed for the STiK/STiNG TCP/IP implementation.

>Is there something better than PPP-Connect (that does PPP) what would
>work with these different internet programs?

Well, I don't know about 'better', but Peter Rottengater's STiNG will connect via PPP and, as far as I can see, has comparable performance to PPP-Connect. STiNG is compatible with most clients (except those from ASH!).

>.Dear Mr BH

If you have been looking at the atari Newgrps (like this one) then you
can just see all the activity there is on the atari platform. TOS 6
anyone? Seriously, there are future developments, and upgrades. Check
out Geneva, the Multitasking system for atari(great 3-d look)
One of the advantages with having an atari is the built- in midi ports.
Atari was made for music! There is software that was developed that
you just can't find in the Mac/pc arenea.(DR T..M..Music
mouse..editrack) Cubase :the most talked about sequencer today started
with atari and continues to sopport the platform.Not to talk about
Emagic Logic!
Actually, the atari platform mostly is built up of it's users as with
any so-called DEAD platforms such as Commadore 64, or the amiga.
The Atari is alive as long as there are people who use them.
Atarian

311. TAF Meeting Jan.21st - Internet Night!

Newsgroup: comp.sys.atari.st
Date: 1998-01-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <34b2f6c5.0@nemo.idirect.com>
Source record: 110422

Agenda for January 21st. 1998

The Internet has proven to be an excellent resource for finding out information on support for the classic Atari platform, as well as finding new software that keeps your computer up-to-date with the other platforms. The only problem is - how do you connect your Atari to the 'Net? Can I actually surf the web? Are clients available that will allow me to take advantage of things like ftp, Usenet and IRC?

This special TAF meeting will answer many of your questions on getting online with your Atari, thanks to special guest Martin-Eric Racine, a beta-tester for a number of Internet clients (like CAB and NEWsie) as well as the beta-tester for the STiK TCP/IP stack. You'll see demoes of the latest English version of CAB (2.5) and NEWsie, find out what local ISPs are the best for hooking up, and maybe even see a few surprises. Be sure not to miss this very important meeting that can breathe new life in your favorite computing platform!

BUT THAT'S NOT ALL! MGI Software will also be there at the meeting complete with the newest upgrade to Calamus SL, featuring among other things much improved speed, new functions, and a complete suite of modules for further modifying and fine-tuning your projects. The perfect opportunity to improve your projects.

UPCOMING EVENTS FOR FUTURE MEETINGS:

FEBRUARY 18TH - GAMES NIGHT! - we're going to look at the best ways to have fun with your Atari computer, featuring some of the best new games available, including the demo for RUNNING, the new DOOM clone for the Falcon! If anyone has any requests for a particular game, be it new or classic, drop us a line and we'll see about covering it at the meeting.

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Probably not as Andreas doesn't like much of what I suggest, if he even cares to answer. I did ask about why MagiC didn't let me to move windows outside the screen to the left and apparently this is in 5.2 so maybe he is listening to me anyway. but I guess someone else asked about it.

BTW. Is Andreas doing everything on MagiC by him self? Is he mr. MagiC?

Still if someone could translate the docs into english quite a few of us would be very happy. I noticed that the docs have been updated to cover 5.2 now and it's new features.

much
troubles.

> > extended modes to shel_write() and MagiC supports one of them (if I remeber
> > correctly),
> > limit memory useage for a launched application.
>
> MagiC has both IIRC.

Yes you can limit the memory using shell_write() but not set the
enviorment for
the launched app through shell_write(). I think there are 4 new modes
added to
shell_write() with AES 4.1.

> maus.sys.atari.software is internationally accessible just as well, so the

> choice of language, I can't help but calling your suggestion a silly one.

Maybe, but alteast having relevent docs for MagiC available in both
english
and german would help alot. If I remember correctly someone has already
offerd
to translate them and why not help him if he wants to?

I thought it basicly had to do with programming the MMU on the 030, 040
and
060. Not that hard if you are a experienced programmer as Andreas.

> on it?

Quite alot. It wasn't near completion, atleast not the last beta I got.
Not
that it's a major problem as I think Doug had done much more of
different
bits but just hadn't put them together yet and as we all know he codes
faster
than I can speak, it wouldn't take him to much time to get into gear. He
did
also say that he would continue working on Apex in his spare time but he
didn't know when it would be released.

What I wonder more about is Apex Audio. Did this even excist in beta
form?

> If Doug Little is out of the Falcon arena, this is a major blow to the
> userbase.

It sure would, but I wouldn't count Doug out just yet. He hasn't said
anything
about quiting using and supporting the Falcon it's just that he hasn't
got
any time right now.

Newsgroup: comp.sys.atari.st
Date: 1998-01-07 00:00:00 UTC
From: mdwright@mail.ponyexpress.net
Message-ID: <69047p$47b$1@doc.ponyexpress.net>
Source record: 110436

I just picked up a 520ST w/SC1224 monitor, no software or docs.
I know nothing about this machine. It boots, checks the floppy drive,
and displays a mac-like screen. Some questions:

1. Is the OS in ROM? I see a GUI, the mouse pointer moves,
but I can't make anything else happen.

2. Can I format a diskette with the machine as it is?

3. Can I format/read/write diskettes for this machine with
some other machine? (I have PC, Apple, C64)

3. Is BASIC in ROM? If so, how do I escape the GUI?

4. Is this machine useful as a MIDI editor?

Thanks for any info you can provide.

Plenty. Take a look at ftp.lip6.fr there must be quite a few of these. Of
course, you need to have a MIDI sound source connected

Well as I said there is just such program under development which will
be very
advanced. Just like your Akai/Ensoniq/E-Emu sound sampler, but it's in
your
little falcon. Looks veeeerrrryyyyyy promesing.

Ofcourse, if someone wants to make another one, I wont complain.

>
> Magnus, help me out here... ;)

Ehhh... I don't think I'm able to.

I, Doug and Andreas has already talked about this in many emails
but Andreas refused to give Doug a straight answer about FRB buffers
and other strange things. It ended with that Doug gave up. I think
the root to the problem is that MagiC doesn't use the FRB buffers but
uses another memory buffer located only where god knows where even
though
MagiC sets up a FRB buffer.... scary stuff.

But what is your problem? It works fine here and I use version 4.09
of the TK just to be on the safe side.

This is one of reasons why a MagiC webpage with info and bug reports
would be so very usefull.

Well, in the past at the Anahein convention center they used to hold "World of Atari" events, the last I had heard of was the 90' or 91'. This however is an all new event which hopefully will continue for many years to come, lots of vendors and ex-Atari people are signing up, hopefully this will be "THE" event to go to, everyone should show their support, even if you can't go, if you have a website, add the image and link to it, let people on local BBS' without web-access know, try to let every Atari person know about this event.

Notaror Logic is very professional and also there is Logic Audio
which has a great sample editor window, I use them both. The bad
news is that while you could copy the software , there is a box or
key that you most have for the software to even load.

****For Sale***

****Estate Sale Atari ST Treasure Trove****

I purchased the following Atari ST items at an estate
sale a few months ago and am now putting it up for sale.

1. Atari 1040 ST w/1 meg memory.

Special notes: This is the early version that has a TV
output so you can use your TV as a monitor
(you can also plug an Atari monitor into the back).
This version has no internal disk drive so the
computer includes an external 3 1/2 SF314 Atari
disk drive. A few of the keys stick on the keyboard.
Works just great for outputting games to a large screen
TV.

2. SC1224 Color Monitor. Almost new in appearance and operation.

3. SM124 paper white Hi rez mono monitor. Almost new in apperance and
operation.

4. Astra Switch Box. Plug both monitors into this box, plug box into
computer.
Hit the switch to switch between monitors.

5. ST Sound Sampler. Plugs into MIDI port. Record your sound files to disk.

6. Migraph Hand Scanner w/Touchup 1.53 software. Plugs into MIDI port.

7. Shoebox type hard drive holder with interface card to hook up to Atari
ST.
No hard drives in case so you have to add your own.

8. Shoebox type hard drive holder. Appears unused.

9. One bankers box full of software. There are hundreds of disks here with
games,
applications etc.

You can have everything for $175 plus $20 shipping.

>I just picked up a 520ST w/SC1224 monitor, no software or docs.

Very good move, but you might find that 512K is a a bit short.

You'll probably want to check out the Quick FAQ, it should be a good introduction for people who want to get started.

>I know nothing about this machine. It boots, checks the floppy drive,
>and displays a mac-like screen. Some questions:
>
>1. Is the OS in ROM? I see a GUI, the mouse pointer moves,
> but I can't make anything else happen.

Yes, the OS (TOS) is in ROM, you need nothing else really. You can make a boot disk with extra desk accessories and 'AUTO' folder programs.

>
>2. Can I format a diskette with the machine as it is?

Yes, go to the File menu and select Format to format a diskette. You may have either a single sided (360K) or double sided (720K) disk drive. If the drive is single sided, then the 'double sided' option will be greyed out. In this case, I strongly suggest you get a double sided drive (see below). A PC one can be adapted, there are explanations in the FAQ.

With a formatted disk in the drive, it will boot instantaneously.

>
>3. Can I format/read/write diskettes for this machine with
> some other machine? (I have PC, Apple, C64)
>

You can format MS DOS 720K disks on a PC that will be perfectly readable on an ST, but a PC will have trouble reading disks formatted on older STs.

You need a double sided drive in the ST though, because modern PCs can no longer use MSDOS 360K single sided disks.

>3. Is BASIC in ROM? If so, how do I escape the GUI?

Nope, you need a Basic language. The one supplied with the ST (ST Basic) was VERY bad and completely bugged. You can choose between GFA Basic and Omikron, which are both very Pascal-like, or STOS that looks a lot more like a very powerful 8-bit type of Basic. GFA was probably the most popular.

>
>4. Is this machine useful as a MIDI editor?

>

That probably what it will be the most useful for. However 512K is a bit short for the professional software (Cubase, Notator, Logic), and a monochrome monitor is required. There is shareware stuff, like Sweet 16 or Alchemy available, that is not really as good, but will work.

>Thanks for any info you can provide.
>

Your welcome

You need STiNG as a TCP/IP stack and PPP dialer, then it depends what you want to do on the net. For the WWW, there is CAB and for mail, news and FTP, there is Newsie.

Read the docs, and my Quick FAQ.

>mail me! andreas@eunet.no

Usenet is not write only. Read the newsgroups, and you'll see that this question has been answered many times.

Message-ID: <tj-0701981535200001@i525.oro.net>
Source record: 110463

I wish to invite all the Atarians on the web to visit my WWW pages at:

http://www.oro.net/~tj

I am the editor of @Society Magazine Newsletter, the multi-platform (non wintel) computer newsletter, that currently includes coverage of the Apple, Be, and NeXT platforms.

As I was a fellow Atarian from 1979 to about 1994 when I sold all my Atari goodies, I have been itching at including the Atari platform in my printed newsletter.

If I receive enough REPLIES from this message, I may add Atari coverage to both our web pages and "printed" newsletter. Help support Atari and check out what I am doing with the current platforms.

Please send all emails to me:

tj@oro.net

Thanks

TJ Ferreira

The Migraph hand scanner does not plug into the midi port. You are probably missing the cartridge port adapter that accepts the scanner's din style serial connector.

I persionally like to teach them to fly. A shame noone has passed the
CDS Tamagotchi flying test.

Nah, only joking. Turn off the sound! (A VERY dim screen (even tilted)
is a great sign for saying the sound isn't working, though!)

How did this string come to this group, anyways? Was it an advert for
them?

Magnus wrote about Cubase working with MagC.

Cubase from what I know does not work with MagC but Logic (Emagic) does which has received its final update to ver 2.5. Also SoundDiver (Emagic) the synth editor will work with MagC. SD is at version 2.xx now and should be available in Europe, SoundDiver Atari won't be carried by the North American distributer (Emagic NA).

Regards,

Rich

re
> a midi newsgroup that covers Atari computers?

For the most part its dead. Steinberg says the haven't completely left the
Atari anly that support has been put on the back burner.

Emagic has released the last updates to Atari prgs: Logic ver 2.5, SoundDiver
ver 2.xx.

I don't see what more one could want from the midi side of things. Logic &
Cubase offer alot of tools. Just to let you know all these sequencers plus
Vision, Cakewalk etc... (for PC & Mac) have not seen an update to the midi
portion of their programs in (it seems) a couple of years now. They have
all been busy adding audio capabilities to their programs.

You can also look up SoundPools web site besides audio software they
have a couple of midi things:http://ourworld.compuserve.com/homepages/soundpool/

Hehe! It's Alt+Clr/Home for the left click, and Alt+Insert for the right
click. I forgot to put it in the FAQ.

It is possible to use the ST without a mouse, but it definitely is not
comfortable enough for long term use.

You really do need an Atari compatible mouse. A PC serial mouse can be used,
by connecting it to the serial port, but then you need a serial mouse driver
that you will put in an AUTO folder on your boot disk. There is one called
mouse25 on the lip6 archive.

>
>Also, the File drop-down menu items are *all* gray, despite the fact

Some menu functions need to have something selected first. Try clicking on
the drive icons. All the options should not be greyed out. The Options menu
should be active.

>Finally, and maybe the source of trouble, tipping the machine up
>I hear something small rattle inside. Any particular do's and dont's

>for popping the case?

Might be a loose screw or something. I suggest you get it out quick, and
don't let it rattle around will the machine is on.

To open the case, remove the screw in the square holes. The ones in the
round holes are for the disk drive.

Well Apex does work under MagiC. You can even switch application while running it if you go back to the desktop while you are in Apex. Be sure to limit the amount of memory Apex uses or you wont be able to do much...

Cubase is another story. We realy need a new good sequenser or the Atari will fade away in the music industry. Anyone giving it a shot?

I just talked to him yesterday and he is not out of the falcon arena.
He is just very busy working. Apex 3 is not canceled he just doesn't
know when it will be ready.

He also said that he might get more time soon hacking on all this
nice stuff, BM, Apex etc.

Oh, he still uses his Falcon at work even if it's PC related stuff. :-)

He might even do a OpenGL/Direct 3D clone for TOS, atleast he would
like to do it.

I'm also interested by this program. In fact I have already written
to the authors because the last version archive file was corrupted.
I received an answer about a month later. They updated to the new
version. Unfortunatelly, I wiched that it would work on my HADES 060
but it doesn't. By the way, It works on my other FALCON 030. If you
expect an answer, you will have to wait for a while. Meanwhile, if
you want, you can have a look at my own program that is a freeware
on my home page. My program - Eureka 2.12 - is quite similar if
you want to describe graphs in 2D or 3D with mathematical formulas.
This program is in French and in English ; and its English documentation
is in PAPYRUS 5 format, which you can read with the demo version of
it available on various FTP.

you can download my program on both following addresses :
My mage :
http://www.ief.u-psud.fr/~lecoat/eurk0198.zip
Or on Saka's FTP at :
ftp://193.190.205.13/archive/atari/mathematics/eurk0198.zip

Try it, and tell me what you think of it. I'm interested in your
remarks.
Best regards,

Bye for now ...

> made the same mistake I did. I think the Web page actually states the
> emulation as ESC p/Windows (or something like it), appparently this is
> different from ESC P2.
I apologize. I've taken a look at the downloadable drivers now, and as
there's no Mac-driver for the Stylus Color 400, it seems unlikely that the
printer isn't GDI. Sorry for my "attack" and the wrong statement I posted.
The webpage for the Stylus Color 400 unfortunately states "Printer
Language EPSON ESC/P 2", which I would consider false information for
potentional customers.

> I agree that the Epson Stylus 600 is ESC P2 and works fine on the Atari
> and I'm told that the old mono Epson Stylus 400 also used ESC P2 codes so
> I was very disappointed that the colour 400 didn't.
I would opt for the Color 600, anyway, as it's not too much more
expensive, and has 1440dpi horizontal resolution, which makes quite a
difference when printing on special paper for that resolution (of course,
only if the source picture has a high enough resolution, too). Maybe I'll
try if I can "convince" NVDI's Stylus driver to use 1440dpi as well.

Ciao

Thomas

From: pettert@notam.uio.no
Message-ID: <692rsf$90i$2@ratatosk.uio.no>
Source record: 110355

I've just aquired a TT with a Crazy Dots VME graphics card (incl. the 32k module). Tried to connect my Mag 17" multisync to it, but I get no video signal. The card has two D-SUB connectors, 9 pin and 15 pin. According to the Crazy Dots manual, the 15 pin port is for standard VGA connections, the 9 pin for expantions (?).

The manual also says that only analog monitors can be connected. I've no idea if my Mag is analog or digital. (Hmm - the Mag manual claims an analog 0.7 volts peak to peak input signal, guess that makes the Mag an analog monitor...)

Has anyone some advice for me before I start ripping the TT apart??

(snip)
Thanks for your reply. I have now found and read the mini-FAQ,
and I have a different set of questions.

I don't have an Atari mouse. I've been moving the pointer with
Alt+arrow keys. Moving the pointer over a menu causes the menu
to drop, moving the pointer down the menu highlights each non-gray
item, pressing Enter key has no effect. I've tried lots of
key combinations with no success.
Is it even possile to use this machine with no mouse?

Also, the File drop-down menu items are *all* gray, despite the fact
that the floppy drive appears to be reading the diskette at boot-up.

Finally, and maybe the source of trouble, tipping the machine up
I hear something small rattle inside. Any particular do's and dont's
for popping the case?

thanks again to all who responded,
Mike

I don't know any does or don'ts about popping the case but do open it. I heard a rattling in mine and it turned out to be a screw. If it had rolled of the RF shield and hit the circuit board I would screwed.

It should work with the Mag, no problem. But you do need to have the drivers installed, and CDMANAG has to be in the proper order with respect to GDOS. The manual covers this, IIRC. It's probably best to start with the regular VGA.INF file and then move on to one of the more exotic files (like the ones for NEC monitors) when you get that working.

Of course, I always recommend that people get NVDI-ET4000, since it's much faster and more compatible than the default drivers. It's just getting kind of hard to find, from the sound of it.

BTW, the 9-pin connector is definitely NOT something you should try to connect a monitor to.

Hi Werner,

Thanks for the compliments on the site, as for the you being delusional, I'm sorry I came down harsh on you, but a lot of what you were saying and what I've known first hand were boarding on: Either this guy is another anti-Atari guy spuddering off jimberish just to be a pest or he's misunderstanding something. However I will take it that you may have very well read about several projects Atari was working on (Perhaps specifically for Europe) that may not have been known here in the US.

Aha, you hear stone falling.. :-)
The best message in the new year!
Yep, i'm waiting for the new apex. (alpha)
Nice Programm, Davi shows me a demo at the last atari fair.
(1 hour long) :-)
Great Software!

>He also said that he might get more time soon hacking on all this
>nice stuff, BM, Apex etc.

Hm, time is the dumb point at all.
Nobody have enough time to do good thinks..

>Oh, he still uses his Falcon at work even if it's PC related stuff. :-)
>
>He might even do a OpenGL/Direct 3D clone for TOS, atleast he would
>like to do it.

Wow, i'm suprised. And demos avaiable?

Doug's page is down? (Same as Titan's download area) ?
I forgot to ask dave for a demo of apex3 (alpha) (They have a demo release) ?
We have to wait..

Best regards
Robert

Wellllll, I don't know about the dead part, but I think the Cubase score
for the Atari is about as good as I have found. I have the demo version
for the ibm compatibles, and although faster, not significantly better,
at least for my use.

For the $$$, I am quite happy with my situation. I bought the piano
score software from musitek for my PC, I scan the sheet music in, save
it as a midi file on a floppy, take it to the Atari, load it, burst it,
and voice it. Instant arrangements and my Atari system cost me WAY less
than any of the stuff for the Mac's and PC's.

There are lots of folks using the "dead" Atari....I communicate with
several via the steinberg news group. Lots of assistance available
there from experienced users.

In its niche, it is great! In MY OWN opinion, and I am entitled to it
:>))

>something?

It would have to check every address the 68000 generated that had the
potential to write data and match it against a map of currently
permissible address ranges, and the MMU just isn't that clever. In
supervisor mode a program can access anywhere and in user mode the
address range is restricted and that's about all the MMU can cope with
as far as memory protection is concerned.

>Om a 68000 you can't do much though.

True. By the time you'd come up with a decent memory protection scheme
it would have been easier and cheaper to upgrade it to a cpu with
protection built in.

>key combinations with no success.
>Is it even possile to use this machine with no mouse?

The left mouse button is alt+Insert and the right button should you
ever need it, is alt+Clr/Home. To doubleclick just hold down alt then
tap the key twice quickly.

>Also, the File drop-down menu items are *all* gray, despite the fact
>that the floppy drive appears to be reading the diskette at boot-up.

Select the floppy icon with alt+Insert then the menubar should at
least have the "open" option available.

>Finally, and maybe the source of trouble, tipping the machine up
>I hear something small rattle inside. Any particular do's and dont's
>for popping the case?

It's one of those things that is tricky until you've done it once.
Remove all the small screws underneath then hold the two halves
together and turn the machine the right way up again. Now lift the
left hand side upwards first so that the last part to come away is the
part around the disk drive.

Note that the disk drive is mounted on three long screws and it may be that they've been removed and replaced without dismantling the machine. There is a metal (brass coloured usually) spacer where the fourth screw would have gone, had it existed. The spacer will go walkabout inside if someone has removed all three drive screws.

>Is it even possile to use this machine with no mouse?

While holding down the ALT key and pointing at a menu item, press the INSERT key (just above the left arrow) to activate it ... just like a left-mouse press. The CLR HOME key (just above the right arrow) is just like a right-mouse press.

So the answer is ... yes ... but it is a bit awkward. But try to operate the mouse on any other machine with the keyboard. Unless the application programmer's built-in the keyboard equivalents, you're out of luck.

>Also, the File drop-down menu items are *all* gray, despite the fact
>that the floppy drive appears to be reading the diskette at boot-up.

Try selecting one of the floppy icons with a single mouse click so the operating system knows which drive you wish to perform a function on. Even if you only have one floppy, the operating system allows you to have an "A" disk and a "B" disk using the same mechanism.

>Finally, and maybe the source of trouble, tipping the machine up
>I hear something small rattle inside. Any particular do's and dont's
>for popping the case?

Take your time. Don't be rushed. Make notes. Have a bunch of containers for small parts (muffin pans work really well).

Gently remove the keyboard, noting the hidden wire underneath! When unplugging the keyboard wire, carefully note which color wire goes to pin one. Make a mark on the connector if you must.

Be sure to touch ground frequently (a metal water pipe works great!) to prevent static build-up which could fry your ICs.

When the case is open, take a moment to appreciate that the level of system integration is 4X better than competing

technologies (IBM & Apple) at the time of production.

New at Systems For Tomorrow January, 8th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

HAPPY NEW YEAR!

Papyrus 5.15 for TOS Computers $169.99
Papyrus is a powerful, easy-to-use word processor for all
ST/STe/TT and Falcon computers. It makes extensive use of a
comprehensive range of both text processing and DTP features,
enabling you to create all kinds of professional looking
documents. Papyrus 5.15 Upgrades also available. From HiSoft.

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support
for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek
E3/E6/35T+ version is also available. From Homa Systems.

RAM Gizmo /w 14MB for Falcon030 **SALE** $99.99
Wow! RAM prices sure have droped over the last couple years..
This is by far our best price ever. Under $100 (well a little)
for a populated RAM Gizmo with 14MB RAM! Limited quantity
available. From chroMAGIC.

Operation SKUMM for Falcon030 $49.99
If you love to kill terrorists, this game is for you! Blast the
bad guys as they pop onto your screen. Kinda like duck hunt, but
the theme is more humane than killing those poor ducks. :)
Features True Color Graphics! From Logiton.

HD Driver 7 for TOS Computers $49.99
Latest version of the best Hard Drive software you can get.
Upgrades from v5 or v6 are available for $25. The return of your
manual and disk are required for the upgrade, Email for details.
From System Solutions.
** sold out again, new stocks will be arriving soon **

CAB 2.5 /w PPP Connect for TOS Computers $49.99
The long awaited update to CAB is now shipping. All preorders
have been processed, and we have limited stocks remaining from
our first shipment. CAB 2.5 includes several new features and
Plug-Ins, plus it includes PPP Connect, a TCPIP stack for MagiC,
to allow easy internet WWW access. From System Solutions.
** sold out again, new stocks will be arriving soon **

Aazohm Krypht for Falcon030 $49.99
Enter the merciless world of Aazohm Krypht and confront 5
different fighters in a True Color battle to the death. This is
~~~~~~~~~~~~~~~~~~~~~~~~~~~

a beat-um-up style fighting game like Kasumi Ninja or Mortal Combat. It contains violence and some bad language, so it's not for the kids. Must be 18 to buy. From Logitron.

Radical Race for Falcon030 $49.99
Radical Race is an exciting new top view racing game (ala Power Drive Rally on the Jaguar) with an important difference: guns! Requires 4MB RAM and a Hard Drive. Jaguar PowerPads are supported. From Logitron.

Xplore CD for TOS Computers $24.99
This German disc contains mostly German PD and Shareware software (How did that happen?) Also includes a collection of fonts and graphics for Calamus. Plus a few full version programs such as the ToXis virus killer. From Seidel Softwareservice.

Electronic Cow!
Three cool music applications! For more information check out the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Back in Stock from HiSoft:
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.

Also Available:
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
MIDI Maze $4.99 The classic happy face shooter!
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

Printed Catalog?

Message-ID: <199801090107.a9157@h.maus.de>
Source record: 110385

Hi Petter
1) Your Mag-Monitor is an analog monitor.
2) did you try installing the driver-soft for the card? You didn't mention at all...
I had a CrazyDots (before I changed to Matrix) and used NVDI-ET4000 by Behne+Behne (still available and fully supported!). There comes a VideoModeGenerator along with the NVDI package. Quite easy to handle and absolutely necessary to optimize the card's output for your monitor.
Try this!
CU
Frank

Ken Macdonald <macdonal@cfcsc.dnd.ca> writes:

> so. Geneva+MiNT(minixfs)+NVDI (My setup :^)
> replaces
> -AES
> -GEMDOS
> -VDI

MiNT does not replace GEMDOS completely. It still uses some of it's services,
even if no DOS filesystem is used anymore.

Even if it did, you did not mention (X)Bios, which is true because it's not
replaced by MiNT either. So your combination cannot work without the ROMs.

Cheers Peter

: >Could anybody volunteer specifics as to what programs won't work with Geneva
: >or MagiC? I have Geneva 6 and am experiencing some quirky kind of problems

: Titus,

: I have both Geneva/Neodesk and MagiC 4/Magicdesk on my TT. I find that
: use MagiC alot more than Geneva. The basic reason is it seems to handle
: memory allocation better than Geneva. This should, I guess, be expected
: as Geneva is sitting on top of TOS 3.06 (on my TT) while MagiC replaces
: most of TOS during boot up. Geneva does seem to handle older programs
: better and the Geneva/Neodesk combination provides a lot nicer, IMO,
: interface. MagiC, OTOH, does allow a much easier and faster way of
: shutting down an application that misbehaves and seems a little faster
: with some operations, esp. those that require intensive memory usage.

: I downloaded a demo version of Papyrus not to long ago and found it
: almost unuseable on my TT under Magic or Geneva. I was thinking of
: getting it for my son who in his second year of college. Screen redraws
: were weird, picture display (ie., jpegs, tiffs took forever) and over
: all placement of text/pictures/graphics were all screwed up. This may
: have been do to the fact that I have a Nova board on my TT, but an
: application like Papyrus should be able to handle this!

The Papyrus 5 demo requires the use of the EFMS modules to load and display
images. They are not included in the demo for some strange reason.

paxton@zetnet.co. wrote:

: Is it still possible to download an OLD version of CAB.. say v1 or
: something.. the one before it made all the cache folders...
: Ho yeagh and the OVL that goes with it..

: If you know where then where please ?..as I can't find one anywhere,

As far as I understand it, it would not be possible for CAB to receive
"online" documents without the cache, since the OVL writes the document
into the cache for CAB to read.

If you really want to use CAB without a cache, perhaps the nearest
alternative would be setting the cache to a very small size.

>It's not. Where did you get that information? All Stylus printers use
>Esc/P2, not Windows GDI.

That's what I thought initially but the book for the 400 states Windows
only so I phoned the Epson technical help line, I actually talked to
somebody from 2nd level support rather than risk somebody just answering
a question without any real knowledge. I was told that the 400 needs Windows

>
>If you don't believe that, take a look at
>http://www.epson.com/homeoffice/inkjet/sty400/
>

If you have another look at the Web page I think you will find that you
made the same mistake I did. I think the Web page actually states the
emulation as ESC p/Windows (or something like it), appparently this is
different from ESC P2.

I agree that the Epson Stylus 600 is ESC P2 and works fine on the Atari
and I'm told that the old mono Epson Stylus 400 also used ESC P2 codes so
I was very disappointed that the colour 400 didn't.

Yours,
David James

Bonsoir,

Dans l'article <tj-0701981255400001@i553.oro.net>,
Thomas Ferreira, <tj@oro.net> a ?crit :

??Does anyone have the spec's on the future Milan TOS compatible computer
??coming from Germany.

68040, EIDE, 4 bus PCI, carte ET-4000.

??1.) Who is manufacturing it and do they have a WWW site.

FalkeVerlag - I don't know for WWW.

??2.) Will it be available in english for USA users.
??3.) Cost

5?000 or 6?000 FRF (which must make ~1?000$ I think), IIRC

??4.) When will it be available or is it just vaparware at this time.

Prototypes where showed at the end of 1997. Selling planned for
february 98, IIRC.

Hi,

On 5 Jan 98 10:32:49 GM, Vernon L Enriques wrote:

> Does anyone know if Atari Falcon can read .WAV samples?

Sure, it can even edit and save them ;-)

> I have a bit of a predicament...I purchased a very new Yamaha A3000
> sampler, and it will read just about every kind of file out there.
>
> Problem is that it will recognize PC and MAC files only.

Well, you can read/edit/write both PC wav and Mac aiff files on the falcon.
The main problem is frequency. If you don't own an Audio Clock or an S/PDIF
interface, the Falcon won't be able to match the 44.1KHz or 48KHz the a3000
needs. But frequency conversion is also possible (with 525 for example).

> Any ideas how I can get files off the internet via my Falcon and then get
> the A3000 to read my Atari created .WAV file?

Yes, copy the audio files from the falcon to a 1.4Mb floppy disk formated
on the PC, or on the falcon with appropriate formatter.

> Besides a lot of the .WAV files are .zip and I don't even have
> the correct .zip program to extract these files.

Strange. Which program did you try?
Hope this helped.
Bye.

Mario, I think Tony meant how the old CAB cache used to look something
like this:

C:\INTERNET\CAB\CACHE\GEE\THIS\IS\A\LONG\URL\HOPE\IT\FITS\HMMM.HTM

Tony, if that's the case, email me a reminder and I'll send you a copy
of it, the cab.ovl (and maybe an early version of STiK, just in case)
- I'm in the middle of a major project, and will probably forget by
the time I'm finished (I have to search through a huge stack of
floppies to find it).

420. MagiC Questions

Newsgroup: comp.sys.atari.st
Date: 1998-01-08 00:00:00 UTC
From: tkelly@mail.pressenter.com
Message-ID: <691fpk$d8c$1@jair.pressenter.com>
Source record: 110476

Does anyone know if it is possible to save extensions in the MagiC fileselector? I've discovered by accident that you can add extenders by double clicking the extender box, but don't know if there is anyway to keep them there permanently.

Does anyone know if aliases can be made to function properly under MagXdesk? Aliases seem to pass the real program the alias' path instead of the program's path when they are double clicked. That means a program looks in the alias's path for its resource and other associated files. That effectively makes the alias worthless and seems like a glaring oversight in an OS that's supposed to support aliases.

Magic came from KAOS?

Just wait till Maxwell Smart (Secret Agent 86) hears about this!

CONTROL will have all it's agents mobilised immediately.

One good way when looking at "ads" is to check for Mac/Windows compatability. If the printer can be used with a Mac it is not hooking into 95. The 400 only works with 95, it will not work with a Mac or an Atari.

> and displays a mac-like screen. Some questions:
>
> 1. Is the OS in ROM? I see a GUI, the mouse pointer moves,
> but I can't make anything else happen.
Yes it is. It does shadow the OS into Ram as a part of Bootup.

> 2. Can I format a diskette with the machine as it is?
If there is a floppy drive in the right rear of the machine. ATari Sts
came in both internal and external floppydrive configurations.

> 3. Can I format/read/write diskettes for this machine with
> some other machine? (I have PC, Apple, C64)
If you have a floppy drive the format of the atari is basically the same as
a PC but unless you have tos 1.4 or higher you cannot read a atari
formatted disk on the PC however you can read a PC formatted disk on an
Atari (720k).
>
> 3. Is BASIC in ROM? If so, how do I escape the GUI?
No, Basic isn't in ROM you have to load it in from disk. You really cannot
escape the GUI unless you load a modified OS (as many of the games do)
> 4. Is this machine useful as a MIDI editor?
Atari has been the machine of preference for musicians for quite a few
years. There is a lot of professional level music programs available.

424. Atari ST stuff (games) forsale

Newsgroup: comp.sys.atari.st
Date: 1998-01-08 00:00:00 UTC
From: dav@cc.gatech.edu
Message-ID: <691la3spm1@solaria.cc.gatech.edu>
Source record: 110480

I have tried to post this from my mail account 4 times now. My ISP
is having problems. Please reply to dav@netdepot.com for faster response.

Atari stuff forsale.

All prices include shipping. (If you think any of the prices
are outragious, make an offer.)
I wont make sales for totals under $20. The shipping would
kill me if I did.

I'm not making much on this stuff and I am tired of moving it
with me. I just hate to throw it away.

Hardware:

$25 SH204 (20 meg harddrive)
(It works. You could use the controller and box and replace
the drive)

Toadfile 129X (85 meg harddrive, 44 meg Syquest, clock card)
$100 with 8 syquest disks

$15 SF314 (External Floppy Drive)

$25 Spectre GCR w/ ROMs

$40 Yamaha Rx21 Rhythm Machine (midi ready)
$40 Casio MT-240 (midi ready)
$70 both w/ Atari Midi book w/ disk of software

Games: (All in original boxes with docs)
($296) $200 Take all the games for

$5 Adventure/Eliza/Life/PONG 4 pac
$3 Airball
$3 Alien Fires
$3 Archipelagos
$5 ArticFox
$4 Astaroth
$8 Barbarian/CrazyCars/EnduroRacer/Wizball/Rampage 5-pac
$2 BattleChess
$5 Battlehawks 1942
$5 BattleMaster
$5 Brataccas
$3 Castle Warrior
$4 Championship Wrestling
$5 ChronoQuest
$6 Death Sword (same as barbarian)/Barbarian II

$5 Deathbringer
$3 Double Dragon
$4 Dragon's Breath
$5 Drakkhen
$5 Dungeon Master
$4 Elite
$5 Eye of Horus
$5 Fire Zone
$5 Flight Simulator II
$5 Full Metal Planet
$2 Global Commander
$6 Hacker/Hacker II
$4 Harrier Strike Mission
$5 Hero's Quest
$5 Heroes of the Lance
$4 Hostage
$3 Manhatten Dealers
$5 Nine Princes in Amber
$5 Obliterator
$1 Pirates of the Barbary Coast
$3 Plutos
$5 Road Raider
$8 Roadwar 2000/Roadwar Europa
$5 Rocket Ranger
$5 Shadowgate
$5 Sherman M4
$5 Skyfox
$4 Space Harrier
$5 Star Fleet I
$3 Star Raiders
$5 Star Trek: The Rebel Universe
$5 Sundog
$4 Super Huey
$5 TechnoCop
$5 The Quest for the Timebird
$3 Tower Toppler
$5 Universal Military Simulator
$5 War in Middle Earth
$5 Warship
$5 Windwalker
$3 Xevious
$5 Zak and the Alien Mindbenders
$5 A Mind forever Voyaging
$5 Wishbringer
$5 Enchanter
$5 Cutthroats
$5 Leather Goddess of Phobos(w/ scratch&sniff)

Games: (With docs but the box is lost)

$4 Road Raider
$3 Menace
$3 Batman: The Caped Crusader
$3 Barbarian
$3 Zany Golf

Misc:

$20 CAD 3D 1.0
& Cyber Studio (CAD 3D 2.0)
& CAD 3D Plotter & Printer Drivers
& Cartoon Design Disk
& Future Design Disk
& Cyber Paint

$10 ST Sound Digitizer (hardware)

$2 Print Master Art Gallery I
$5 AEGIS Animator

$25 Large box of Documentation
(2 Developer kits, a few GEM books, random Atari docs)

$20 Xerox box of Atari magazines w/ disks
(All but 3 or 4 Starts, about 10 Compute's Atari ST)

$1 WordWriter ST
$1 Thunder (spell checking DA)
$1 Flash 1.6
$1 ST Chat
$1 ST Talk
$1 Quick ST 2.2

$30 Mark Williams C ver 3.0.9 w/ manuals and CSD (debugger)
$15 MCC Pascal
$6 Modula II

($870) $475 or take everything for
Maybe an Atari club could buy the lot and have a sale to its
members to raise money.

Hello.

Following one link of the UTSI (great!, thank you Jo!), I got to the webpage of this german program that has Windogs and ATARI versions. I tried the (english) demo and realized that it has great graphing capabilities and an excellent vector graphics composition module... Of course I want this program but I have received no answer from the company (Bytech) to my e-mails asking how can I buy it.

Does anyone know about Bytech... is out of business? unreachable? they dont read e-mails? (I don't speak german so calling long distance is not an option for me).

Is there any distributor somewhere in the world? (better if in the US)

Anyone using this program?

Hey... I am a customer!!!! :-)

Any help will be greatly appreciated...

Daniel.

Magnus,

I use TK 5.07 and can't get it to work with MagiC. I seem to have
2 different problems and I can't tell you why I get one or the other.
Here they are:

1. Either MAGXBOOT runs and I get the usual white screen before
reboot and then nothing happens -- just sits there,

or

2. MAGXBOOT bombs (2 bombs) but the Falcon keeps booting and just
ends up in TOS.

On the occassions when #2 happens, if I run MAGXBOOT without TK
MagiC boots up, but doesn't last long -- of course not without
TK!

I've never used TK 4.09 as 5.07 was available by the time I
installed the AB.

Greg

Here, Papyrus v3, v4 and v5 demo work just fine with TOS 3.06,
Geneva/NeoDesk, Super Nova and NVDI. I have v5 on order and have no
doubt that that, too, will work just fine.

>
> Would a PPP/PAP connection benefit from the VJHC setting, or is this
> only for SLIP connections?

Theoretically, yes, it would benefit, it can be used with PPP to. However,
often Ataris have the combination of a slow machine with a fast serial line
(modem). VJC involves a fair bit of computing for compression of a TCP/IP
header, say this takes the time t1. Typically, VJC compresses the 40 bytes
TCP/IP header to 6 to 10 bytes, i.e. typically 32 bytes are saved. The
transmission time for those 32 bytes is saved, call it t2. Now you have a
benefit from VJC if t1 is smaller than t2. Obviously this is the case for
all faster machines on slower lines.

I have not done any timing measurements, but my estimation is that a 8 MHz
68000 (ST and 10xx STE) on a 33600 bps modem is beyond that turning point,
i.e. should not use VJC. I think for an unaccelerated Falcon with ISDN the
same is true.

You really should try it out. The difference won't be great, that's for sure.
I guess you're on the safe side to use VJC if you have a TT, Medusa, Hades or
accelerated Falcon.

Cheers Peter

> with username and password.

Your ISP does not support PPP ? PPP is easier to set up.

If SLIP-only, then first you need to do a manual connection with a
terminal emulator once to find out the login script. Write down the
last characters before the ISP stops sending and expects your input.
These characters will give the first FIND line (See end of DIAL.SCR).
Probably the first FIND line will be something similar to "Username:"
or "Login:" (without the quotes), after which you're supposed to type
in your account name. The stuff you're expected to type in give the
corresponding RESP line. Now move on. Probably the next thing the ISP
wants is the password, so the next FIND line will be "Password:", for
which the RESP line is your actual password.

You should read the DIAL.SCR which gives a lot of helpful information.

Cheers Peter

> uses HTTP 1.1.

If you're accessing a web page hosted by a HTTP V1.1 server with a V1.1
CAB.OVL, you can still get stuck if you're using a V1.0 proxy server. As
the OVL would ask the proxy, which in turn is unable to retrieve the docu-
ment due to some 1.0/1.1 incompatibility, you won't succeed. In that case
switching off the use of the proxy should help if the firewalling policies
of your ISP allows this.

But an ISP who *requires* the use of a proxy server that only does V1.0 is
a good candidate to be left behind while moving on to another one. ;-)

Possible, yes, bearable, no. The equivalent left and right mouse
buttons are the keys to the left and right of the up arrow.

> Also, the File drop-down menu items are *all* gray, despite the fact
> that the floppy drive appears to be reading the diskette at boot-up.

I thinky ou may need to highlight somethign before it becomes active, I
don't recall.

> Finally, and maybe the source of trouble, tipping the machine up
> I hear something small rattle inside. Any particular do's and dont's
> for popping the case?

Not that I can think of, it's possibly the rod that stabalises the
floppy drive. The floppy drive is held in by 3 screws, I think these
are in square holes as opposed to round holes (or vice versa) I normally
don't unscrew these until I've got the cover off. Oh and you'll ned a
pair of needlenode pliers for removing the sheilding.

```
Yes indeedy folks. All you ex-Speccy owners can rejoice in a
pixel-perfect conversion of Jet Set Willy!! One of the
conversion programmers has kindly donated it to the ST
community, see my ST web page (the 'last updated' date should be
9th Jan 98 - if it isn't, click reload like a madman until it
does. Shift+reload in Netscape to flush your cache. If using IE,
uninstall, install Netscape and ... you get the idea :)

A neighbor of mine recently acquired a 1040 ST but they don't have a lot of software. I have a connection to the internet, but I'm using a PC. Does anyone know of any software (shareware or freeware prefferably, as they don't really have a lot of money to spend) that would allow me to transfer any ST programs that I download to their machine? If you do, do you know of any sites to download good free software? Any help would be much appreciated. Thanks.

ATARI can read floppy disks written by a PC. But the loppy drive of a 1040 ST
normally can handle only 720k disks, Please check.

Well I havn't actually heard/read the specs for it, but I'm kind of a
beta
tester and it's based on my ideas. :-)

But it does work with accelerators as I do have a AB040+Nova my self and
regarding voices I think you get more the faster the computer is. I
think
it has got atleast 24 voices on a regular falcon. I havn't managed to
use them all yet... so I don't know.

I will ask if I can get some specs for it.

Anyway, it works like any regular sampler from Akai/Ensoniq. You can
build
multisampled instruments and have different layers within the
intstrument.
It's also a GEM program so it works just fine under MagiC as well
together
with your favourite wordprocessor. ;-)

Regarding effects I don't know.

It's from the same guy who did MIDPLAY and Digital Home Studio. MIDPLAY
is another nice program.

So do you need a beta tester? :-))

No. I don't even think he has started on it, but you never know. He
just asked a few people if they would be interrested in such a thing.

> Doug's page is down? (Same as Titan's download area) ?

He has no compuserve account anymore, that's why it's down. I asked
him about it but he didn't answer that part.

> I forgot to ask dave for a demo of apex3 (alpha) (They have a demo release) ?

> several via the steinberg news group. Lots of assistance available
> there from experienced users.

Well I was talking about support/upgrades/bugfixes/new-versions of
sequenser software for the Atari and as far as I know there are none.

The Atari is not dead, the sequenser market is, atleast for new software
and support. It's realy pitty that we havn't got a uptodate sequenser
running under TOS/MagiC whatever with all the new features found in the
nes OSes. Maybe something from ASH to look into. I have asked SoundPool
if they plan to develop a sequenser but they do not. :-(

What about license Cubase Audio Falcon and fix it to run with current
and future OSes?

So how does memory protection work under MiNT? I konw that you can
use the MMU to write protect memory areas (Uwe does it with is MAG2ROM
of whatever it's called), so the OS should be able to write protect
all memory except the applications own when it switch task, or??

Ofcourse you can always make dirty programs who crashes the computer
anyway,
but for most programs it would work and produce a bus error insteed of a
crash.

> all been busy adding audio capabilities to their programs.

Well if you use plain old TOS it's fine but if you want to use something
little more modern like MagiC or N.AES you wont get very far. Okey
Logic works on most OSes but I guess it doesn't use any of the new
features found in them. Ragarding Cubase it's much more worse. Cubase
doesn't realy rely on any standards at all and most likely wont work
with
any new OSes in the future. Certainly not multitasking OSes.

On the Mac and PC they are atleast more or less coded after the OS
guidlines and will work in the future as well.

Does anyone know why Cubase doesn't work with MagiC? Has anyone tried
to patch it?

457. Re: Old Yellow Cases

Newsgroup: comp.sys.atari.st
Date: 1998-01-09 00:00:00 UTC
From: Michael Clemmetsen <m.clemmetsen@sunderland.ac.uk>
Message-ID: <34B5EF5D.2A3DF549@sunderland.ac.uk>
Source record: 110310

I have tried a variety of dedicated computer cleaning solutions and found them all to be a useless waste of money. The most effective cleaners I have found are plain old domestic kitchen and bathroom cleaners.

In the UK Mr Muscle Kitchen Cleaner is very effective - this contains bleach so it might not work if you have already tried bleach.

Jif (which is mildly abrasive) might work better, this will bring the colour back but may dull the surface as it will remove the top layer. Also you should check first that the case is the same colour all the way through (by applying it to a hidden area such as underneath) and not top coated with another colour

A clean cloth and cotton buds for the difficult bits is all the extra tools you require.

Finally, always remove all components from the case before you start and make sure it is completely dry before you re-assemble. This may be what differentiates dedicated computer cleaners from household cleaners - they can be applied without dismantling the machine first (just a guess).

Well I would guess they use the same cards as for the Hades as the
drivers are available. If they do it should be Mach64 or ET4000/ET6000
cards so you will get as high resolution as you would ever want.

ATI Mach64 cards handle 32-bit colour (VRAM cards) and I guess ET6000
does it as well.

Don't forget that these cards have limits ;) Of course, they will both be
able to display 1280x1024, but not in any frame rate or color depth.

> ATI Mach64 cards handle 32-bit colour (VRAM cards) and I guess ET6000
> does it as well.
Yes, but the card has to have at least 4 MB video RAM to be able to
handle 1024x768x32 as asked in the original posting. I don't know how
much RAM the cards used for the Hades usually have.

With a Nova card (and with others as well), if an application writes directly
into screen memory, it does not work. This is because the screen memory layout
of the card is not the same as the layout in computer memory. So, when this kind
of problem occurs, it is not the card's fault but the application's. I think
no application really deals specifically with graphic cards, that would be too
difficult because of the different makes. So, working applications are those
that don't write into screen memory. For Papyrus, I don't know.

As I guess the Hades uses PCI cards, 4Mb cards are very common and
cheap.
You can even have a 4Mb card in the Falcon so I can't see why you
shouldn't
be able to have atelast 4MB if not 8Mb in the Hades.

Source record: 110318

Reading the arguments against pirate software from the internet most people seem to have neglected one thing, emulators. Considering that myself (My ST packed up two years ago) and most of the ATari scene must now use emulators to run software, that software must be in the form of disk images. So the question has to behow can you play protected games when you can't make images from the disks. I myself, recently bought Railroad Tycoon and found I couldn't make images, so to play the game I had to load a cracked version from the net. Great eh?

In the end you have to realise that people who don't use ST hardware to run the software anymore CAN'T use commercial stuff on protected disks. Anyway, in the end I have to admit it was nice having a manual for Railroad Tycoon anyway!!

Well, depends. I know some people (not with an Atari, though) who'd use
1600x1200 on their 21" monitor if only their card could display that with
> 60 Hz and > 256 colors ...

> As I guess the Hades uses PCI cards, 4Mb cards are very common and
> cheap.
> You can even have a 4Mb card in the Falcon so I can't see why you
> shouldn't
> be able to have atelast 4MB if not 8Mb in the Hades.

I haven't said that, but fact is that 2 MB cards are still widely spread;
4 MB is just beginning to get the standard in the low end market. But my
point was that it's just not enough to have a "Mach64" or "ET6000" card to
display 1024x768x16, you also need enough video RAM.

And btw, don't forget that for the current (cheap) 3D-"enhanced" graphic
cards, 4 MB RAM does not necessarily mean that all 4MB may be used as
video RAM. It's often that some part of the RAM is fixed to be used as
texture or z-buffer.

Sorry, not quite, Thomas!
1024x768x256 fits comfortably in 1MB, because 256 colors needs 1 byte per pixel...
I know, I have one such card.

Cheers.

I have had good results using liquid kitchen surface cleaners (Flash
or Mr.Muscle in the UK).

After cleaning the surface it's a good idea to spray them with a
silicone based (furniture) polish which reduces adsorbtion of new
grime.

Source record: 110328

Hi All

I have tried a few ST emulators on a PC with varying degrees of success.
Can anyone help:-

1 TOSBOX. Seemed good but found problems with KIVI/STZIP. QWK packets unpack as indicated on the STZIP screen but the return to KIVI freezes with a busy bee (moveable) mouse. By quitting TOSBOX and restarting it I find I KIVI can now read the unpacked QWK. This seems to be a path problem but cant find out what.

2 TOSBOX. I cant get it to connect to my ISP or to Meon Valley BBS; doesnt get to the modem properly. I have tried HSMODEM as on my Atari but the boot up screen freezes during Auto folder exection. I have tried serial fix but to no avail. Can get to both ISP and BBS from Atari, and from MicroGates stuff.

3 Pacifist 46. Seems to run but cant get the option to use the keyboard instead of a joystick to work.

Thanks in advance

FIRST THE SOFTWARE:

1. MIDI QUEST 3.0 $15 (Synthesizer sound editor) I have file list, will send upon request;
manual available. 2 original disks. The software comes compressed.

2. TRUEPAINT V 1.02 $18 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B\W. to true color.

3. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

4. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio-video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $20 (Falcon).
Needs Multitos.

7. LDW power: Excellent spreadsheet program. It makes all the files you create with
this software compatible with the Lotus 123 format (has acc/prg. covert utility)
$ 2.00 no manual original disk only. (all Ataris).

HARDWARE

1. Intel External 144e (14.4Kb) FAX/MODEM with cable for Atari or pc. $39.
(has original PC software)

2. SCSI II to SCSI II 50 pin cable. Use it to attach your Falcon/TT to and external SCSI device: (The Jazz, a CD rom, etc.) 2 feet. $15.

3.Atari PS for external Disk Drive $10

4.external PS for the 520ST

Free stuff (with the buying of any of the items :) :

- Omnires Monitor emulator for the ST.
-External floppy drive 1DD good case/mechanism.
-Falcon F-16 fighter simulator
-STOS the game creator
-Lure of the Temptress
-Jaws of Cerberus
-Knightmare

-Space quest 3

If interested send ZIP code to ask UPS for charges.. For software I can send it for $3.00 US priority mail. (if you are in the US; I am willing to send abroad also) Regards,

The great MT-32 is for sale. It goes with midi cable, power supply
and manual. All in the original box.
It has a built in reverb, 128 sounds and 9 channels to choose. The
sounds can be edited using software written for Roland D-10, D-20. $ 85
OBO. If interested send ZIP code to ask for UPS charges.
Thanks, Phil.

In article <69785d$eo2$1@usenet76.supernews.com>,
shammond@loop.com (Steve Hammond) writes:
>>Sorry, not quite, Thomas!
>>1024x768x256 fits comfortably in 1MB, because 256 colors needs 1 byte per pixel...
>>I know, I have one such card.
>
> I think Thomas ment 32K.

No, I meant 32 bits per pixel. I doni¿½t know how Roland got the idea Ii¿½d meant
32 or 256 colors. And I guess 32 bpp is exactly what Thomas Ferreira had ment
in his original question.

Ciao

Thomas

>remember how I did that a few years ago ... you know I own a Crazy
>Dots ...

Excuse me I have made a fault, it's not REDIRECT.PRG but well
SLCT_DEV.PRG which drives the resolution choice !
REDIRECT is only intended to boot in a ST high resolution to see
programs like XBOOT !

I apologize

Jo again

On certain ftp servers (ftp.uni-muenster.de in Germany would be a good guess, IIRC - try any archie to locate it). It's current version (1.12pl5 or similar) is free. It also ships with N.AES in Germany and perhaps with Geneva in the U.S., and an older version came with Ataris MultiTOS.

490. Ram For Atari TT Ram Board

Newsgroup: comp.sys.atari.st
Date: 1998-01-10 00:00:00 UTC
From: tkelly@mail.pressenter.com
Message-ID: <698cjs$95q$1@jair.pressenter.com>
Source record: 110143

I have one of the Atari Ram Boards that allows you to put in 4 or 16 megs of TT ram using 30 pin simms. I have 4 megs now and want to go to 16. Does anyone know if there is a particular speed of ram that I need to get, i.e. 60, 70 or other nanoseconds or will the industry standard 4 x 8 simms you find from most dealers do the trick.

It is also the MOST IMPORTANT QUESTION an ATARI USER NEEDS TO ASK FIRST!!!
Don't forget that many people don't know about this newsgroup, or have never
been on it before. Also some people only have limited access or are using
someone else to ask the question for them. EXPECT THIS QUESTION TO BE ASKED
FREQUENTLY. And be happy there are others wanting to know how to get hooked
up with an ST. I figure you are suffering from repetitive answer syndrome
NICK:-). After a user is online, the FAQ is the most handy thing an Atari
User can come across. Those FAQs got me up to date on the ST in no time.
Great work, we just have to hold some peoples hands to get them going.
Also, I believe it says mail me andreas@eunet.no, I hope someone did:-).

>Thanks.

FTP site atari.archive.umich.edu
I consider this a good place to start there is lots of everything.
It works as an Http as well.
Get some DSDD 720k disks and format them on the PC in DOS.
Go there download him a ton of stuff.
Get STARTER.TOS and this will give him a number of archiving utilities.
ZIP,ZOO,ARC, and LZH.

You can also look at the ZIP files with Winzip etc. and unzip them for him.

He will probably want his own internet connection in the future so keep in
mind that there is SLIP and PPP for the Atari.

ST can read PC format disks. NOT HD, only DD unless mods have been made for
a 1.44 mech which I don't believe will be the case.

Your friend will have more software than you would ever have expected.
Good luck.

Yes, I believe there is a mirror FTP site in the UK, However
go to

atari.archive.umich.edu

check out applications in the for kids section. There are 5 things there I
believe.
art4kids.zip
homework.lzh
kidpub_d.lzh
kpaint_d.lzh
skg_demo.lzh

These are about right for a five year old.
Look for some BENTLY BEAR programs, they are excellent and any of the other
DA BRUMLEVY software. Really well tailored to children. I believe many Public
Domain groups have some of this stuff.

Sure, what settings do you need help with? Just give some more information
and your answer should follow. Also include your hardware for good measure.
Do you have STik or STing working, do you have HS modem etc.

Yes, Be nice if you had a HD. They can be found cheap. CAB works in 1meg
of ram. I also Recommend NEWsie, as it works with a 1meg machine as well.
You will need STik or STing, HSmodem and the XControl panel.
Very easy once your up and running.
Get those programs and post again if having trouble.

No, the ST/Falcon had alot to offer, and still is very capable indeed, thus
the reason for this post.

>You can also look up SoundPools web site besides audio software they
>have a couple of midi things:http://ourworld.compuserve.com/homepages/soundpool/
>

Thank you.

Just so we don't lose track here. As Magnus suggested I was asking about
MIDI support. Essentially programs that a dealer could order up over the phone
and stock on his shelf. Since distributors in Canada only handle PC products
any Atari products needed for distribution must be done at a direct level.
Unfortuneately I thought the thread of existing MIDI software still in production
and being packaged was larger. I did get some leads and possibly this may
lead to some Atari Software back on the shelves where they belong after a
4 year absence. The dealer likes his Ataris and knows what they are capable
of obviously, or he wouldn't have asked me to look into this for him.

I just wish I could have given him a better list of software that can be
purchased and software that is still supported.

To everyone who answered thanks alot. And to the dealers who flogged their
stuff to me email . Thats quite alright and was what I wanted. Any other

software products still available and supported not seen in this thread
would still be appreciated.

So, there are no Falcon clones? What about Falcon old stock sitting somewhere?

Thanks again Brian.

You should be able to transfer any softwere that will fit on a 720k ms/dos
format disk to the atari, both machines use the same format. You can also
transfer bigger ZIP files by decompressing them on the PC then rezipping
them onto muti-disks, then unzipping them on the atari. Bill

>05 CDDRV16.SYS
>07 CDDRV256.SYS
>10 CDDRV32K.SYS

With NVDI V = or >2.5 you CAN'T use CDMANAG in the AUTO dir. From AUTO dir
you must run REDIRECT and if needed SLCT_DEV. Redirect comes just
after NVDI.
>
>After some experimenting I did get a video signal, but no matter which

>remains blank. I've tried to run AMC-gdos instead of NVDI, and no
>other auto programs, but nothing seems to help..
>There's nothing wrong with the TT itself - the standard video port
>works just fine.

If you have some money to spend use it to buy the latest version of
NVDI if you don't have it already ofcourse. NVDI and Crazy Dots forms a
perfect team. Without NVDI the screen redraw and the likes will be
rather slow. It's amazing how NVDI can speed up some things. It has
ofcourse a few other great features but this is out of topic right
now.

Again DO NOT use CDMANAG if you use NVDI with graphic card support. In
AUTO dir there must be a NVDIVGA.INF. I'm not sure but I think NVDI
creates this file if you run the install prog.
Somewhere on your harddisk you must have a GEMSYS dir too. This folder
must contain the GDOS fonts, NVDI drivers like NVDIDRV1.SYS,the
graphic card drivers like XVGA32k.SYS and other things. XVGA32k.SYS is
the graphic card driver of NVDI and replaces CDDRV32K.SYS. No need to
say ofcourse that the assign.sys contains the path of GEMSYS.

Hope this helps
Martin

I always assumed from the name MAG2ROM that it did just that. Allow
you to put MagiC into a ROM whereupon it would be in supervisor space,
possibly the data as well because the lower ram is also supervisor
protected.

Not knowing anything about MAG2ROM, this could all be totally wrong so
could someone who does know please dive in 'cos I'm just guessing!

Selling a brand new (used a few months) Mega ST style detached keyboard and connecting cable. Comes with hand made (by me) adaptor cable to permit use of the keyboard with a Falcon! I had to put this rig together to make a program called VideoMaster work with the Falcon. As I'm now using a PC for video and the Falcon for MIDI, I have no use for this keyboard. Only $50 for the keyboard, a shielded Atari keyboard cable and my homebrew adaptor. This setup cost $120 to assemble, so you pay shipping at my discount price.

Yes, but emulators are not 'official' Atari machines, and nobody guarantees
that your software will run on it.

>
>In the end you have to realise that people who don't use ST hardware to

>Railroad Tycoon anyway!!

Why not get an old ST for cheap. They really cost next to nothing nowadays,
and then you'll have 100% compatibility.

Yes I am aware it needs a cache.. But older versions used a folder you selected.. newer versions make a folder for each letetr of the alphabet
Older versions of CAB worked quite happy on a one meg stfm... newer versions dont..

<smile>

I found an older version on a ftp site so all is now well... cheers and fanx anyways Mario :)

my brother found that a product in North America called Easy-Off Microwave Cleaner does an incredible job of cleaning computer cases (as he demonstrated to me on a Mac case one day). It's a spray foam. Unfortunately, I've been unable to source it lately. I've been tempted to try either VIM or Javex cream to see how that works.

For a weekly cleaning of dust, I use Endust for Electronics. Does a great job keeping the monitor screen clean as well.

540. HELP:Seeking St MOV.viewer

Newsgroup: comp.sys.atari.st
Date: 1998-01-10 00:00:00 UTC
From: kenkel@zetnet.co.uk
Message-ID: <696qk0$76e$1@irk.zetnet.co.uk>
Source record: 110253

Would anyone happen to know if there is a viewer program for the STe 1040 (TOS 1.62) which supports files with the mov.suffix? I have downloaded the only one I could find, 'Movies12' (i.e.'Movies at Night'), which supposedly works both as a stand-alone screensaver and viewer for such files but, despite using medium and low-res emulators for my mono monitor, I have been unable to implement its usage. Info on any downloadable or commercial software which would work for viewing the above files, e.g. movie trailers, would be appreciated. Also, I have searched in vain for downloadable de-archivers which unpack files with .zoo,.exe,.arc and so on. For now, I can only unpack zip and lzh files. Any ideas?

Cheerio - EDK

I think there might be some confusion here between the "Atari MMU" and the "Motorola MMU". The Atari MMU is present in one flavor or another on -all- TOS machines. It's not too bright, but it does what it's supposed to do (very basic memory mapping, very basic memory protection). If you open up an ST, you'll see it somewhere on the mother board.

The Motorola MMU is physical part of 68030/040/060 processors (unless you buy a version that specifically doesn't have it). This is the MMU that MiNT uses for memory protection. And everything that Magnus mentioned above is quite possible using the Motorola MMU. Plus more (shared memory, memory compaction to prevent fragmentation, etc....).

James,

Yes it is, but you need to use an additional device to convert the ASCI
port on the ST to a SCSI connection. IDC makes one called the Link.
There is another one made in Germany (I think) also.

There is a program called m_player or something like that. It displays
mov, .avi, .fli, .gif etc etc. Good luck!

I can get a very cheap second hand Matrix 1208 graphics card for my
TT. The questions are: There seams to be a 9 pins connector and not a
15 pins on this card. To which monitors can this card be connected to?
Is it possible to make an adaptor to convert the 9 pins connector to a
15 pins one?

Hey! mhop@snip.net (mhop) wasn't it Sat, 10 Jan 1998 11:18:36 GMT that
you wrote:

>>>Can someone please explain exactly how to get online with an Atari. I

>What are the minimum hardware requirements?

For WWW,FTP,IRC,EMAIL,NEWS etc You can get on the internet with a
One meg STFM and no Hard drive or any extra harware at all, well a
modem is essential of course, a phone isn't (work that out!)

You would need the currently available news and email etc software,
an old version of CAB Browser (CAB 1.0) and a SLIP connection,

For all the ATARIans who may want to debate the point <SMILE> the
poster asked for the MINIMUM hardware requirements, and the above will
work, had he asked for the optimum or best requirements I would of
course have pointed him towards a minimum 2 meg ram and a Hard Drive,

Lets help ATARIans get on the net.. not scare them off! :)

.

>the regular VGA.INF file and then move on to one of the more exotic files
>(like the ones for NEC monitors) when you get that working.

I've got the drivers installed as described in the manual:
CDMANAG is in the autofolder. I put it after NVDI, is that correct? I
can't find anything about the running order in the manual. In the
assign.sys file I have the drivers as:
05 CDDRV16.SYS
07 CDDRV256.SYS
10 CDDRV32K.SYS

After some experimenting I did get a video signal, but no matter which
of the INF files I put in the auto folder (as CRDOTS.INF) the screen
remains blank. I've tried to run AMC-gdos instead of NVDI, and no
other auto programs, but nothing seems to help..
There's nothing wrong with the TT itself - the standard video port
works just fine.

>at all...

Yes, I forgot to say that all drivers are in place, and after some
testing I did get a video signal but the screen is still blank. I
could try to remove the 32K module, but then I would need the original
jumper settings on the video applications slot. These are unfortunately
not described in the manual. Do you remember the jumper settings on
your card?

You have completely forgotten to put REDIRECT.PRG just after NVDI ...
REDIRECT.PRG is a program which allows you to choice between the
various resolution put in the NVDIVGA.INF ... I don't kniw which
version of NVDI you have installed, but you perhaps will have to
convert your CRDOTS.INF into NVDIVGA.INF ... but I really don't
remember how I did that a few years ago ... you know I own a Crazy
Dots ...

Hope this helps

Hallvard,

Imagecopy will also make GIFs transparent and interlaced. I'll
take a look at TRANSGIF and see if I can build a simple front-end
for that one also. By the way, have you downloaded GEMGIF? I've
had no feedback at all on it and I _know_ there are some bugs in it
relating to error checking. I can probably just add support for
TRANSGIF to GEMGIF and make it multi-purpose.

Greg

573. Where could I get TT Rom v 3.06 ?

Newsgroup: comp.sys.atari.st
Date: 1998-01-10 00:00:00 UTC
From: action97@hotmail.com
Message-ID: <34b79394.8908894@noticias.ibernet.es>
Source record: 110286

I have a TT030 with 3.01
My cubase doesn't work if I boot from HD, It says "no key, bye"
(The key is there)
If I boot from floppy and start cubase from floppy too, everything
goes
Sometimes I can start cubase from HD but after some minutes the
sequencer begins to drop notes randomly (????????)... Yes !!! it's
true, and I don't think this is som kind of algorithmic compoition
.... :-))

Well, .. I think I could try to upgrade the TOS ROMS but there isn't
any support for ATARI in Spain, so if anybody could send me a dump of
the ROM it could be very useful to me...

Thx for your time

Don't delete it. I can't say about the latest versions of MagiC but the MAGXDESK that comes with MagiC 5.03 supports less of the protocol than AVSERVER does, hence the need for it.

PM>Is it possible to make an adaptor to convert the 9 pins connector to a
PM>15 pins one?
Yes. Maybe you should have a look at your hardwareproviders' advertizing.
There a `Multisync 9Pin to VGA 15Pin' cables that should do well. Or even
adapters doing the same.
or you do it yourself:
15 Pin 9 Pin
Pin 1 <-----------> Pin 1 (red)
Pin 2 <-----------> Pin 2 (green)
Pin 3 <-----------> Pin 3 (blue)
Pin 5 <-----------> Pin 6+7+8+9 (ground)
Pin 10 <-----------> Pin 6+7+8+9 (ground)
Pin 13 <-----------> Pin 4 (horizontal sync)
Pin 14 <-----------> Pin 5 (vertical sync)
(from chips'nchips by Michael Ruge)

By the way: what is 'cheap' for a Matrix1208?

Well, it doesn't bother me to answer the same questions over and over again.
After all, there are always new people on here every day, and that is
definitley one good thing. This group has already been so helpful for me
that I'm just too happy to help out other users when I can. That's what
Internet is all about (well, before it was taken over by microsoft and
cocacola).

What bugs me, is people who jump in here, ask a question that has been
answered at least twice that same week, and then say 'please reply by email
as I never check in here'.

I always thought that part of netiquette implies that you read newsgroups
during a few days (just lurking) before posting.

I also can't imagine that someone who has even the vaguest interest in Atari
computers wouldn't read the atari groups.

Mainly because it weighs over 40K. It's online in several locations, HTML in the US and Europe, and Ascii on Hallvard's FTP. I usually posted a note every week in this group, but I must admit that I've been quite busy these days, and I have to do several updates (particularly in the Internet section).

I'm also in the process of making a text file for newbies about connecting a low end STF to the Internet.

I'll try to get the FAQ update finished this week, and I'll keep you all notified.

Cheers

There's no need for configuration really, just make sure the programs are in
the correct order in your auto folder. The correct order is:

DRVIN.PRG, then MFP.PRG, then STING.PRG.

To make sure they are in that order, copy them to some other folder, erase
them all from the AUTO folder, then copy them back one by one the way they
should be.

No, the guy cannot use a // Zip on an Atari, but this is not because of
lacking bidirectionality (what nice word!), since the Atari parallel port IS
bi-directional (otherwise programs like PARCP wouldn't work, would they). It
is just some lines that are missing.

The result is the same though.

: I have one of the Atari Ram Boards that allows you to put in 4 or 16
: megs of TT ram using 30 pin simms. I have 4 megs now and want to go
: to 16. Does anyone know if there is a particular speed of ram that I
: need to get, i.e. 60, 70 or other nanoseconds or will the industry
: standard 4 x 8 simms you find from most dealers do the trick.

: --Terry Kelly

TT RAM chips must be 30 pin 1Mb or 4Mb x 8 non-parity nybble mode SIMMs.
^^^^^^^^^^^^^^^^^^^
The 8 means 8 chips on each memory card, NOT 9 or 3, they will not work.

I purchased my chips through Memory Supersource 1-800-457-6837.
Item # WM4000870S 4MX8 70NS SIMMS

The newer TT RAM boards it will have 6 jumpers labeled w101 to w106.

The jumpers settings are as follows:

w101 w102 w106
1M x 8 SIMMs (4MB) 2-3 2-3 2-3
4M x 8 SIMMs (16MB) 1-2 1-2 1-2

jumpers w103 & w104 are for the start address remain the same 2-3

jumper w105 is for burst mode ON 2-3 OFF 1-2

I am trying to instal Magic 5. but everytime I boot up I get the message something like-----Not enough room to create partitions --- etc,etc, and this just keeps scrolling up the screen repeatedly.

Does anybody know if there is a minimum size of partition for Magic 5 or a minimum size of C drive etc.

Any help would be appreciated as the manual doesnt appear to cover this problem.

From what I've heard the RAM Gizmo will work with the Nemesis as long as the SIMMs are fast enough. 60 ns is about right. 80 is too slow for anything but Nemesis low mode. Since more than likely, you bought the Nemesis for high speed and resolution, you'll need the 60 ns chips. Check the rating on yours.

> What are the minimum hardware requirements?

Whatever hardware you've got, it's fine if you got enough memory. On a 512 kB
machine very few clients will work, but with 1 MB most can be used. You'll need
more if you want to run CAB, 2 MB is fine for that.

Apart from that, no requirements. HD is nice, but not essential, floppy does too.
Works in all screen resolutions and also any graphics card. You're obviously
better off with TOS 1.4 or later, but I know of people running it with TOS 1.0
as well.

It even works on MacIntosh with MagiCMac !

Cheers Peter

> I know, I have one such card.

Do you really think the 32 referred to the number of colors ?? It's the number of bits per pixel what he was talking about. After all, 1024x768x256 is a pretty inconsistent way of telling the settings, 1024 refers to columns, 768 refers to rows, the last number refers to planes (not caring how they're interwoven). So you should refer to your settings as 1024x768x8 really.

Hi Benjamin... I had a Ram Gizmo that I bought from Chro-Magic, and I installed 4 4-meg SIMMs, rated at 80ns for a 16 meg total. This worked fine until I had Nemesis installed. Nemesis at low speed worked fine, but whenever I would run it at high speed, I would get artifacting in icons and window sliders, etc, etc,...also whenever I viewed pictures such as JPEG's/GIFs, it would cause pixel breakup. Some programs seemed to be unstable as well. Titan Design says that this is a sure sign that your Ram board isn't keeping up. They recommend a Ram board that uses 72-pin SIMMs with a speed rating of 60ns... Thats what I'm goin to, very shortly. :)

I've been in the U.S. Maybe that's the problem. AFAIK, 2.5 is the
latest version available in the U.S. (I just bought it a couple
months ago.)

My grateful thanks to all who have so kindly and promptly answered
this query. I have found that the MP STe program from Mille Babic's
home pages is promising - just a couple of problems on which I have
sought clarification but it does play the .MOV files. Thanks also for
all answers relating to my archivers question.

All the best,

Hello Thomas.

I did visit the @Society Magazine Newsletter page and I think is a
nice idea to have an "alternative" systems newsletter... At the moment it
looks very NeXT-oriented, but if it will have Atari contents, I'll be
certainly interested, especially that a yearly US$15 subscription is not
far from my budget :-).
Would be interesting to know what kind of coverage you have in
mind... news, software evaluation, Hardware, etc...

Regards.

Daniel.

From: tkelly@mail.pressenter.com
Message-ID: <699le7vaa1@jair.pressenter.com>
Source record: 110196

I just tried running Peter's newest version of STing (1.12) on my TT, MagiC 5, NVDI, setup. I get 2 bombs just as Sting tries to establish the PPP connection. I do not have this problem with STing 1.08. Do I need to start from scratch on the dial script or can I use the old one that works? Anyone else having problems with 1.12?

609. Symbolic links in jinnee desktop

Newsgroup: comp.sys.atari.st
Date: 1998-01-11 00:00:00 UTC
From: mille@tripnet.se
Message-ID: <699ld0$1ma$1@minox.tripnet.se>
Source record: 110197

Hi!

Found that the icontext for the symbolic links are not readable in the jinnee desktop, they are shaded (dotted) in Italics and therefore very unreadable. I do use NVDI with MONACO.FNT but have tested some TrueTypes as well and have disabled NVDI too.

There's no switch what so ever in jinnee, nor help in the manual.

Does this have something to do with the environment varaiable _TXT for MagiC?. I have tried to use '_TXT 6 6 1' and higher with no luck. Is there someone that use symbolic links in a 256 col mode with jinnee and can actually read the text for symbolic links? (icons and directories)

O.k jinnee is suited for Monochrome users too, but there is options to set colors for different filetypes, directories, hidden files etc, why couldn't they implement a possibility to set a color instead of this shaded Italic, Italics is o.k but shaded Italic. :(

Best Regards
Mille Babic

614. Removeable Disks

Newsgroup: comp.sys.atari.st
Date: 1998-01-11 00:00:00 UTC
From: shammond@loop.com
Message-ID: <699saa$p5v$2@usenet51.supernews.com>
Source record: 110202

Just had an interesting experience with my SyQuest 135 drive. For no apparent reason a couple of my carts, somehow, are now write protected. This is NOT related to the little metal tab on the bottom of the cart. I can trasfer data off, but not on. Nor can I partition the carts using either HD 5, ICD SCSI Pro Utilities (6.4) or EDGE. In all three cases I get a message basically saying that there has been a TOS error and the boot sector cannot be accessed or created.

Has anyone else experienced anything similar or have any ideas WITH -what in the hell :)- caused this to happen. Other carts work fine and new carts can be partitioned with no problem. ??????????????????????

TIA

Steve Hammond

Terence,

The problem is a conflict between the previous dailer and the latest SERIAL.STX - I sure Peter will post also. If you do not use the latest DIALER (1.15) you need to use the SERIAL.STX that you are (were) using with the pervious dialer (the Nov. 97) MODULES.LZH package.

I set up the latest version and had a major slow down in receiving mail/news/internet - like 6 to 8 times slower in receiving mail and news items. Send was close to 2X as fast, however. Peter responded to my E-mail very quickly and suggested a few thing to try. In my case using the TCP.STX module from the previous release solved my problem. The confusing thing for Peter is that some see a speed increase while others see a speed loss.

The latest version of STinG does seem to provide a more solid connection and the timeouts in CAB, at least in my case, are less - though this is somewhat spectulative as those timeouts can also be caused by internet traffic.

Steve Hammond

Hi!

>Does anyone know if it is possible to save extensions in the MagiC
>fileselector?
Yeah, just download MagiC!Conf from my website :-) (see below)

>I've discovered by accident that you can add extenders
>by double clicking the extender box, but don't know if there is
>anyway to keep them there permanently.
They're saved in the MAGX.INF behind the tag #_FSL
.TXT,.ASC;*.IMG,*.GIF,*.BMP;*.WAV,*.AVR etc. So groups are separated by a
; and extensions are separated by a comma.

>Does anyone know if aliases can be made to function properly under
>MagXdesk? Aliases seem to pass the real program the alias' path
>instead of the program's path when they are double clicked. That
>means a program looks in the alias's path for its resource and other
>associated files. That effectively makes the alias worthless and
>seems like a glaring oversight in an OS that's supposed to support
>aliases.
No idea

I also had "self protection" problem with my EZflyer. But I can't
remember well and it was due to tricky maneuver : I have bootable
cartridges with CBHD driver. When I boot the Falcon, the cart is
always considered as C: (maybe the SCSI is taken first). Also it
happens the driver loads 2 times !

To avoid it, I booted (Boot ? What is the past form for this ??)
ignoring completely the internal HD (with alt key) and arrived on GEM
desktop or MagicDesk, the cartridge was locked.

But this is temporary. Booting normally, the cartridge is fully usable.
For your problem, you may backup your carts and try to format it on Pc
or Mac, then reformat it on Atari...

I have a selection of Atari ST titles for sale.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...

SCSI SC-ROM drive, Atari CD ROMS, 16-bit sampler cartridge/hardware.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

My config. is very similar.

I just substituted the new stuff from the STING and MODULES
distribution (retaining DIAL DEFAULT CACHE) and it all worked first
time (as I would have expected).

The only time I had trouble at PPP connect is when I attempted to run
with Van Jacobsen Compression ON.

You could also try deleting CACHE.DNS if you have used the one in the
distribution. I have had to do this once before to allow STiNG to make
a fresh start with the cache.

Frederic,

Its nice to know that some else has experienced the same problems. In my case I am not booting from the EZ, I just use it for data backup and storage for my Calamus CDK files, jpegs, tiffs etc. I also run all of internet stuff from a 135 cart.

I was thinking of taking the drive to work and seeing if I could partition the offending carts using Adaptec SCSI tools on one of the PC's. If this does work it will be the first time that I was able to do something on the PC that I cannot do on my TT :).

I really do want to find out what in the heck is going on and why I cannot partition the offending cartridges on the Atari.

Thanks for the info

Wait a minute - it was my understanding that the parallel ZIP required a
bi-directional port - which we ain't got :). If we can I'll just
"borrow" the ZIP for work <VBG>

Parallel zip drive will not work on an ST..... Anyway why would you want one. Get a SCSI they are cheap and fast and you can move them to about any platform you want.

I was having problems when I first got the original release of
STinG 1.12 and it would bomb in a similar way under Geneva; then I
tried out the new version of the Modules archive Peter put up a few
days later and it fixed the problem; no more bombs. There was
apparently some sort of bug in the Serial driver (regarding Van
Jacobsen compression) that might be related to that.

Anyway, try getting the new MODULES.LZH archive from Peter's site
and try installing that.

>or just post here.
>

I'll assume you mean HSMODEM... you deen the following files in the following order in your autofolder (of course stuff like NVDI will want to be in front of it but...)
DRVIN.PRG (from HSMODEM)
MFP.PRG (from HSMODEM)
STiNG.prg (From STing)

you'll need the Sting config file in there too IIRC, it's called default .cfg.

Contact me via email if this doesn't work, I'll have a close look at my AUTO folder again.

644. FS:(UK) 14400 Modem and Colour Monitor

Newsgroup: comp.sys.atari.st
Date: 1998-01-11 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <69b16k$gm7$3@irk.zetnet.co.uk>
Source record: 110232

Hi,
Following my upgrade to a 33K6 my old 14k4 is up for sale. It's an Enact, Rockwell chipset, it's boxed with PSU, and leads, and it's done me well for the last 14 months on Zetnet. It comes with the Atari shareware utiolities that The Up[grade Shop included with it, TeddyTerm, Connect etc...If you know someone with aN ST who wants to get online, this does the job perfectly...20 UKP

Also I've got a Commodore monitor that is basically the same as a Phillips CM8833 Mk1. It's a bit battered, but it works fine with both my Falcon and my Jaguar, I haven't got a lead to test it with my STE I'm afraid. I'm only getting rid of it because it came with my Falcon when I bought it and I already had an 8833Mk1 for my Jag.....plus I'm about to get a big VGA for the Falcon, as it has Nemesis/Videlity (we had it running 1280x960 yesterday on a 15" Gateway monitor....it was almost impossible to see anything....it was too small).....35 UKP

Both prices do not include postage, though I'd advise you to view/collect the monitor, as it has an unfortunate <AMIGA> badge that might offend....

I live near Oxford BTW and can deliver within 30 miles or so, thoughj I get down into Hampshire for the WAG meetings at Whitchurch every month so could extend as far as Winchester without problems on WAG days (Second Saturdays normally, but I will confirm)

>I've been in the U.S. Maybe that's the problem. AFAIK, 2.5 is the
>latest version available in the U.S. (I just bought it a couple
>months ago.)

Is that really so? Oh boy, I'm glad I'm living in Europe and that
German isn't a great problem for me. I bought my copy of Kobold 2.5
German version some 4 years ago. In the mean while I've bought me an
upgrade from 2.5 to 3 and two months ago from 3 to 3.5.
The problem with the most German software houses is that they aren't
very keen to translate their products into English.
If the German language isn't a great problem for you you can always order the
latest version from ASH. You can find more information on the ASH
homepage http://members.aol.com/ashinfo/index.htm. Their page are
translate.

There are some jumpers near the powersupply on the Falcon, but these are for the ROM waitstates (AFAIK).

>Differential SCSI, Single Channel Attachment SCSI and Fibre Channel
>Arbitrated Loop SCSI. What is all this?!? Can I use Ultra SCSI?
>That seems to be the cheapest.

Ultra SCSI is SCSI-3 which is supposed to be able to conform to SCSI-2
standards (auto sensing of the bus width).

I'm using a Microp 4345AV drive which is a SCSI-3 (Ultra) drive.

Uwe, if you happen to read this (I should mail you). The latest version
of HDDriver (I have ver 7.04) partitioning software resulted in sector
errors on a couple of partitions on my Microp 4345 (4.5 gig). HPOPTIMIZE,
ZORG, EDGE, CORRECT all detected errors on two of the 5 partitions after files
were written. I ran ICD's partitioning software and when it read the existing
partition scheme it had to adjust the sector sizes.

I repartitioned with ICD but use HDDriver for the driver.

Now no problems.

Regards,

Rich

You say this message appears when booting MagiC, so I assume installation
has worked properly. Does the message appear after magxboot.prg is run,
after the following warmboot? If so, what harddisk driver are you using
and how much memory does your machine have? (I suspect the message may
come from the harddisk driver, that's why I ask.)

Ciao

Thomas

Hi,
Contact Homa Systems House.
There is a new version of the Mustek Scanner driver which works
quite well with the SP II. Contact
aa414@freenet.carleton.ca and a demo of the new driver will
be provided to you. The driver is on special right now for
99 CDN$.
The response from customers who have Parx and Nova scanner
driver has been that Nova is much more superior.

Best regards,
Nima

Hi Katherine,

first af all, use the latest version of the Mustek.prg which is 1.22 (maybe
even higher) It's now called Novascan and includes driver for both HP ScanJet
and the Mustek scanner. A friend had similar problems with the earlier 1.18
which was solved when he got 1.22. If you don't find it anywhere I can binmail
it to you. Talk to Homa Systems, they should have it as well.
Second, if it doesn't work better with the new NovaScan the problem might be
caused by bad SCSI termination.

The driver is saved to either the pageprn.sys- or pinprn.sys-file,
depending on what kind of driver it is. You can select your new
driver with the NVDI driver-CPX.

Message-ID: <884638368.2144206856@dejanews.com>
Source record: 110056

Hi there,

Just wondering if anyone has a current address for me to register MegaPlayer

The info I have from the docs is... ========== MegaPlayer© Shareware Version 1.15, the 15th of October 1995 By St©phane LESAGE aka Simplet / FATAL DESIGN e-mail 100620,2673@compuserve.com (Skynet/FD) ========== But I have never had a reply from any emails to this in the last 6 months. I'd like to register it if someone knows another address that I can get hold of him.

Failing that, can anyone suggest another good mod(and other format) playing accessory that runs as well on the Falcon, doesn't bomb or kick-out funny formats, is reasonably stable under Magic and has the features of this one. I've tried a few others, but this would be my pick for the best.

Many thanks,

Replies preferred on personal email to.....

john.moffat@lion-nathan.co.nz

Cheers,

John E. Cash

You'll probably see a lot of replies on this one ;-) Here's my
uderstanding of things:

Javascript is basically unrelated to Java. Javascript was created by
Netscape Corporation, and, although they may now have finally released
developer docs on it, Microsoft Corp. had to backward engineer it to
put it in Internet Explorer. This was legal because Netscape Corp.
had declared it an open standard. For this reason it should be
permissable for Alexandar Clauss to include it in CAB, should he
choose to.

Java was created by Sun Microsystems. Developers have to sign an
agreement with Sun to become official Java developers. Jave runs as a
virtual machine on many platforms and generic code (code written
without a specific platform in mind) can be downloaded and compiled,
usually on the fly. I don't think anyone has signed an agreement with
Sun to port Java to the Atari, but I don't see why Sun wouldn't allow
it. Small beans maybe, but it doesn't cost Sun anything either.
meanwhile, the Free Software Federation, and probably others, have
released their own clones of the Java comiler, and this could legally
be ported to the Atari if need be, should it prove technicaly
worthwhile.

673. Is there a Falcon FS UK

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <69e6oj$l8r$1@irk.zetnet.co.uk>
Source record: 110061

A friend of mine has asked me to ask if there's a Falcon FS in the UK ATM, he's looking for one and isn't on-line. He'll be phoning me Thursday evening I think so replies before then please. I have no idea what specs or pricing etc he wants,. I know he's not planning on using it for music, so he won't need FDI's and Cubase etc.......

Many thanks

>
> --Terry Kelly

I couldn't believe it. My TT RAM board had 100 ns SIMMS in it.
I guess the TT was slow enough to use that speed. I would have preferred
at least 80 ns. Now 70 or 60 is the norm. I would at
least want faster ones so I could later use them for
something else. Anyway, don't forget to set the jumpers
for the 16 meg config.

Source record: 110063

>Greetings all,
> CAB 2.6 and MiNTnet, do the two work well together? And just as
>importantly - does its news reader/pop3 E-Mailer work with MiNTnet also?

I've no experience of using CAB under MiNTnet, but I believe from other
posts in here, that the two work very well together. You just need the
MiNTnet OVL for CAB.
If the above emailer/news reader you are refering to are the ASH ones (they
are nothing to do with CAB as such), then, no, they will not work with
MiNTnet. They will only work with PPP-Connect/I-Connect.
You will have to use MiNTnet emailer and newsreaders.

>Is there a compiled 32-bit version of CAB 2.6?

Don't think so. But I could be wrong.

>Does it support progressive JPEG? (or is this dependent on the ovl file?)

No. CAB does not support progressive JPEGS. It will display them, but not
gradually as intended by the format.

>Will it allow you to use all 4 tctip ports? (I was told Netscape uses more
>than one port while displaying a page with lots of pictures on it, but I'm
>not sure about this.)

No idea what you mean. There are much more than 4 tcp/ip ports, but it
depends what you mean. I use IE3 at work, and don't use Netscape at all.

>I've partly written this on behalf of a friend of mine, as well as for my own
>interest.
>Sorry if these questions have already been discussed, I don't get to read the
>newsgroups as often as I would like.

No problem. I just hope you hang around long to read the answers. :)

677. The Computer Dungeon is BACK!

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19980112232101.SAA08605@ladder01.news.aol.com>
Source record: 110065

THE COMPUTER DUNGEON has re-opened its doors and is once again supporting Atari users everywhere.

The Dungeon is a family run retail business that supports the Atari product line. Our focus is on the entertainment side of Atari, featuring gaming software for the ST, Falcon, and Atari Video game systems. Additional services may be added as our customers request them.

Services we provide include: PD/Shareware disks that YOU create (we list the programs in our library and you tell us which ones to put on YOUR disk), full registered versions of Shareware/Licenseware programs, new & used software for the ST and Falcon, new and used accessories for the ST & Falcon, and systems - cartridges - accessories for the Atari Video Game systems (2600-5200-7800 plus the Lynx and Jaguar). We accept VISA and MasterCard and are in the process of setting up a toll-free telephone number.

We'd like you to stop by our web site, look around, and tell us what services you'd like to see offered. Our web site is under heavy construction so please bear with us. We welcome any comments - suggestions you might have regarding the content - layout of our pages. Our address is:
http://www.mcs.net/~isis/dungeon/dungeon.htm

We'd like to Thank ALL of our customers, who not only supported us in the past, but for your cards and letters of support when both my wife and I lost our mothers.

Thank You for taking the time to read this and we look forward to hearing from each and every one of you. Your comments & -suggestions are always welcome and we love talking Atari anytime.

684. WE NEED YOUR ATARI ITEMS!!

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19980112233100.SAA10061@ladder01.news.aol.com>
Source record: 110072

THE COMPUTER DUNGEON has re-opened its doors and is once again offering support to Atari users everywhere.

BUT WE NEED INVENTORY!! We need LOTS of inventory!! We are in need of the following items:

1) Used ST & Falcon Software. MUST be original disks and have documentation. Boxes are not necessary but do bring a higher price.

2) Used ST & Falcon accessories. We need your mice, cables, clock cartridges, ICD Link's, joysticks, external floppy drives, and more.

3) Used Atari Video Game products. We need your 2600-5200-7800 systems, cartridges, and controllers. We need your Lynx items, from Lynx units to cartridges to sunscreens to carrying pouches. We need your Jaguar items, from systems to CD systems to controllers to cartridges to ICD Catboxes.

If you have any no longer wanted Atari items, please call the Dungeon at: Ph: 708-547-7085 and tell us what you have. Or FAX us a list at 708-547-6550. Or send us Email listing what you have at "ComDungeon@aol.com". If you FAX or Email please be specific as to what is included (instructions, boxes, etc.).

Thanks in advance!

Hi

My father went to Mac and imported/converted most of his files, He is happy with the move, although he still says that the Ataris were the best computers that he has owned (4 Ataris, 4 Macs so far).

I now own a genuine I Break Monthy (IBM) and the only file transfers that I do are in ASCII. I would say that it is a personal decision based on your preferance, the Mac will be easier to learn as even with Win95 (Loose95?) you will need to become familar with Dumb Operating System (DOS) commands as they are the same in command line mode.

Just my $0.02

686. Problem with CAB1.5 & Cache...

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <884648020_OASIS_@jaubrey.demon.co.uk>
Source record: 110074
Cross-posted to: demon.ip.support.atari,comp.sys.atari.st

I don't seem to be able to reload pages from cache after log off,
while online if I go to a previous page, it seems to load locally, if
I quit programme and come back a while later it won't reload, just
comes with the message, 'network is down'. Is there a secret setting
somewhere in the menus that'll sort this out? I have tried extracting
the html file via Cache Tool and reloading this, but the file is just
rubbish characters.

I also can't print from a web page, I use NVDI 2.5 on a STe(4mb) and a
dot matrixx printer. I used to be able to do this with a previous
version of Cab and GDOS without problems. I have the pics disabled
etc...

Thanks in advance for any help anyone can give. :))

Regards,

James

When I read Matthias Jaap articles about Java in The ST Computer Magazine I always hope that a clever guy starts to compile something for The Atari.

A good news is that STonX goes JavaST on a PC. Emulate a ST with Java on MS Win95.

I know that a Atari must have strong resources to drive around Java om the screen, but there's lots of Atari that can cope with that, Milan, Hades, Falcon with accelerators etc.

Well, so far they didn't succeed. And chances are reasonably good that they'll never do.

> What bugs me, is people who jump in here, ask a question that has been
> answered at least twice that same week, and then say 'please reply by email
> as I never check in here'.

I agree. There is a great deal of ignorance present in those requests. At least a short explanation of why they'd never check the news is appropriate.

> I always thought that part of netiquette implies that you read newsgroups
> during a few days (just lurking) before posting.

I believe so.

> I also can't imagine that someone who has even the vaguest interest in Atari
> computers wouldn't read the atari groups.

Actually there are a few reasons why people would act this way. Sometimes access to news is painful. Some people can receive e-mail, but for accessing news or other Internet services they have to go to some friend and use his account. Another explanation can be that browsing the news is rather time-consuming.

In any case, news can be downloaded as a compressed archive and read off-line, and if one is short on time, he can still throw away all but the relevant thread (subject).

Hmmm, have you mixed old binaries with new ones ? At least for the Dialer
and SERIAL.STX, you should update both, or none. The remaining ones should
be compatible, but you're better off replacing all binaries, only keeping
the config files.

Cheers Peter

I understand this means a 68030 version ?

Alexander were stupid if he created one. 68030 users gain virtually nothing
while 68000 users cannot use it at all. So for no benefit at all he had to
maintain two versions.

Dunno why people keep thinking special 68030 ("32 bit") versions would
improve things. Only very special tools can really benefit from the opcodes
provided by the newer CPUs.

> Does it support progressive JPEG? (or is this dependent on the ovl file?)

Dunno what you mean by support. Yes, it does. It displays happily also
progressive JPEG. No, it does not. It does not start to display it once
the download starts, the picture must be there completely to be shown.
This is a quirk of the OVL interface.

> Will it allow you to use all 4 tctip ports?

What is that ? I assume you mean TCP/IP, but what are *the 4* TCP/IP ports ?

> (I was told Netscape uses more than
> one port while displaying a page with lots of pictures on it, but I'm not sure
> about this.)

Netscape uses several connections at once which can potentially improve
speed slightly. In most cases it does not provide any significant speedup.

It CAB, again it were difficult due to the nature of the OVL interface.

693. System Solutions

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: phulse@pacifier.com
Message-ID: <34b96603.0@news.pacifier.com>
Source record: 110111

I understand that System Solutions has the exclusive rights on distribution of the english version of CAB.

I also understand that version 2.6 is released, and also that version 2.7 is released by Ash in Germany.

Does SS plan on releasing an english version of at least 2.7? And if not, why not?

Also, what is the latest on any kind of java module for cab?

694. CAB 2.6 and MiNTnet

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: kma54@csc.canterbury.ac.nz
Message-ID: <kN0cXp0FQ9x$@cantva.canterbury.ac.nz>
Source record: 110112

Greetings all,
CAB 2.6 and MiNTnet, do the two work well together? And just as
importantly - does its news reader/pop3 E-Mailer work with MiNTnet also?

Is there a compiled 32-bit version of CAB 2.6?
Does it support progressive JPEG? (or is this dependent on the ovl file?)
Will it allow you to use all 4 tctip ports? (I was told Netscape uses more than
one port while displaying a page with lots of pictures on it, but I'm not sure
about this.)

I've partly written this on behalf of a friend of mine, as well as for my own
interest.
Sorry if these questions have already been discussed, I don't get to read the
newsgroups as often as I would like.

Thanks,

Cross-posted to: comp.sys.atari.st,comp.forsale,comp.forsale.computers,misc.forsale.computers,misc.foresale.computer

Hi there! A more than year ago I finally broke down and built myself a Windows 95 PC. This left me with a BUNCH of Atari ST stuff, much of which still needs a home. I've sold most of my hardware but the software is still taking up closet space that my wife wants. I'm looking to sell or trade as much of it as possible soon. I've also got a few PC pieces (modem, printer, sound card) left over from upgrades that I'd like to get rid of as well.

Check out:

"http://www.csranet.com/~admraljc/sale.htm"

Is there a program which can determine the origin of an MPEG file.
I am playing with MPEGSTE and it can determine the number of frames of
the animation, the resolution and determine that the file is good. However
it also says the format is unsupported. I would like to
A: Find out what format it is in, then convert it to a format that can
be used by M_PlayerSTe.

Thanks Brian.

Source record: 110115

Umm, Uh, well ever since getting these midi cables I have been distracted
only briefly of course, by um, midi games:-).
There is a game called cold revenge that I had on a mag disk that uses
the midi ports. I tried this game along time ago, with no success as it
always flagged the wrong resolution, when in low res. It hasn't worked
on any of my STs or STes. I downloaded a version off the UMICH arc. and
its the same. Any solution to the WRONG RESOLUTION RETRY? Anyone else played
this in SOLO or MIDI? Should the PI? files be in a certain folder or
something?
Thanks Brian.

698. STinG question

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <69c2kv$sbs@news2.tds.net>
Source record: 110116

What, precisely, is STinG trying to do when it says "Initialising Link"? I get all the way through the logon, get my IP address, then it goes to that, and always ends with a "Link Negotiation Failed", and disconnects me. I don't have any problems with the earlier versions, just the last two. And yes, I have read the documentation, and the FAQ - and I've set up every earlier version of STinG. I'm just lost on this one. Is it something to do with authentication (which my ISP doesn't require)?

700. Sting 1.12

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: tkelly@mail.pressenter.com
Message-ID: <69cg7c$gc9$1@jair.pressenter.com>
Source record: 110118

As someone suggested, I used the modules from the latest archive with sting 1.12. I was then able to make the ppp connection normally without bombing, but now I cannot make a connection with any other server than my own. Cab and Newsie resolve the host names ok, but both time out while trying to make a connection. Still no trouble with Sting 1.08.

I guess you have told INSTMAGX to install on C: so this is where ALL
the release will go.

From the look of what I can see on my set-up I guess you would need 1
to 2 Mb spare on C: before starting.

Have you tried installing 'Without Extras' to see if things fit then?

Just in case the partition is in a bit of a mess you could try
de-fragging etc. to clear things up.

Well I have got some very early specs for EXPAND now.

- Play sound in Memory or D2D (sound up to 50Khz 16 bits)
- Play instrument with multisample.
- Each instrument can have an enveloppe of volume, FIR and panoramic
which can be set graphicly.
- Use the 16 Midi channels.
- Understand midi message note-on, note off, pitch, program
change,coarse
tuning, panoramic, master volume, velocity, etc...
- Digital Effect like Reverb, echo, ...

And more....

> > It's also a GEM program so it works just fine under MagiC as well
> > together
> > with your favourite wordprocessor. ;-)

> (Unlike my program :)

Shit, so it's most likely wont work on my Nova card either. Make it GEM!

> PS. By the way - great Afterburnerpage! Think iï¿½ll buy one of those when my
> wallet becomes heavy! How much do they cost in swedish kronor?

Oh, thanks. I just do what I can to make people "aware" of what is
available
to turn your computer into a new computer insteed of buying a PC.
For the price, it's expensive. Somewhere around 4000-5000 SEK. :-(

On the other hand you can also add much more memory which will be much
faster
than regular Falcon RAM. Even faster memory access than the Hades if the
tests are correct. I would say that it's worth the price if you have got
the
money.

717. NVDI MakePRN.prg

Newsgroup: comp.sys.atari.st
Date: 1998-01-12 00:00:00 UTC
From: Ken Macdonald <macdonal@cfcsc.dnd.ca>
Message-ID: <34BA3FDD.61F6@cfcsc.dnd.ca>
Source record: 110135

I have NVDI4, and included with it is a program called Makeprn.
I've used it to create a new printer driver for a 24 pin printer,
and I've saved it. Now what? Makeprn has a list of printers, but
I do not see those printers anywhere in the NVDItools folder, or
the GEMsys folder. When I saved the printer driver, where was it
saved too? the makeprn.prg itself? How can I save the driver to
a *.sys file so that I can use it? The docs with NVDI4 explain
how to use the program, but not how to save a printer driver as
a *.sys file.
Help!

From what I remeber of the software industry back in the days of the
ST,most games software houses didn't seem to guarantee their software
would run on Atari Hardware.

>
>In the end you have to realise that people who don't use ST hardware to
>run the software anymore CAN'T use commercial stuff on protected disks.
>Anyway, in the end I have to admit it was nice having a manual for
>Railroad Tycoon anyway!!

>>Why not get an old ST for cheap. They really cost next to nothing
>>nowadays,
>>and then you'll have 100% compatibility.

An old ST eh? Well, it just one big inconvenience, I own a PC with it's
own monitor that will not function with an Atari ST without some sort of
modification. I don't own a television and so the minimum investment to
get an old ST would be too much when I can download a free program to
emulate the machine. I seem to sense a certain hostility to emulation from
some people who post to this group and I think that's a bit unfair.
Firstly, emulators are not illegal in any way and secondly, my pocession
of the Rom image is also within the law as I own an original hardware
copy.

Rumour has it that Alex Klaus (CAB author) is busily coding a
Javascript module.
However would he not need some sort of licence from Sun Microsystems? A
problem as I imagine they have very little interest in the Atari
platform.
I hope someone does a Javascript module because the WWW is fast becoming
Javascript infested for better or worse.

Javascript is a subset of Java. Java is a programming language in its
own right and is platform independent. Sun microsystems hope that soon
it will be in your TV, your stereo and your toaster. Javascript is more
of a scripting language and is significantly easier to learn.

Later,
Jim.

> I know that a Atari must have strong resources to drive around Java om the screen, but there's lots of Atari that can cope with that, Milan, Hades, Falcon with accelerators etc.

You hopelessly underestimate the processor power Java needs. The Falcon
or Milan are surely not fast enough to support Java in a really
satisfying way.

In Netscape you can setup how many connections Netscape should use. The
more the faster (to a certain point there it will get slower...) as it
can download text and files simultaneusly.

>I rarely see spam here. Is this newsgroup moderatored or is someone >running cancel bots or something?

hmmm good question, somone was, but he hasn't been seen for yonks, so I dunno...
There was also someone who cancelled binaries to newsgroups, we used to get a message in here now and then listing all the binaries that had been cancelled, the latter was a service he was doing for the whole of usenet if I recall, the former, the guy cancelling spam just did it for the ATARI groups,

As you say, there aint much spam anymore so I can only presume cancel bots are still active...:)

Either that are everyone really has forgotten about us :))))))

There are .SYS files for different classes of output device. In your
case the PINPRIN.SYS driver will be used and the particular parameters
required for your printer will be saved in PINPRIN.INF.

<kma54@csc.canterbury.ac.nz> wrote:

> CAB 2.6 and MiNTnet, do the two work well together? And just as

Yes, but you have to use the CAB.OVL for MintNet, instead of the CAB.OVL
which comes with the CAB 2.6 disk.

> importantly - does its news reader/pop3 E-Mailer work with MiNTnet also?

You mean the ASH-Emailer? No this will work only with PPP-Connect (part
of the CAB 2.6 package).

> Is there a compiled 32-bit version of CAB 2.6?

??? We are talking about Atari software, not PC software. So we
always use 32 Bit software ;-)

> Does it support progressive JPEG?

Yes. But it doesn't display them as soon as the first bytes arrive.
It displays them after they are completely downloaded, at the moment.

>(or is this dependent on the ovl file?)

Yes, also true. There's another JPEG module available which
supports the Falcon DSP but this module doesn't support
progressive JPEGs.

> Will it allow you to use all 4 tctip ports? (I was told Netscape uses more
>than

Yes and No ;-) CAB doesn't download the images at the same time. But
under multitasking systems (MagiC, N.AES, MTOS) you can download
many files at the same time. And with the AutoSurf module you are able
to download whole web sites in the background for reading them later
offline, while you can still access web pages in the browser.

In some cases I have downloaded about 5 large archives and about 4
web sites (using AutoSurf) at the same time :-)

Hi, Thomas and Peter,

Thomas Binder:
>> I think Thomas ment 32K.
>No, I meant 32 bits per pixel. I don't know how Roland got the idea I'd meant
>32 or 256 colors.
Sorry for having misunderstood you...

Peter Rottengatter:
>It's the number of
>bits per pixel what he was talking about. After all, 1024x768x256 is a pretty
>inconsistent way of telling the settings, 1024 refers to columns, 768 refers to
>rows, the last number refers to planes (not caring how they're interwoven). So
>you should refer to your settings as 1024x768x8 really.
Well, I think it is a matter of definition and personal preference. The concept
of planes is not used for more than 256 colors. I have seen the interpretation
of 1024x768x16, say, more often as 16 colors than as 16bits. For example,
the user manual of Nova cards constantly uses the color interpretation,
in the form 2, 16, 256, 32K, 65K, etc... Personally, I have never felt this
as inconsistent.
Of course, I should have guessed that Thomas is not a person to get fooled
by such elementary considerations, but my "mistake" was based on a not so stupid
background.

Cheers

Roland

Hey fragmentk!?! :-) What midi unit? Some midi modules (units?) just
accept sysex as is. Others want to "handshake' with other modules or
computers. My Proteus/1 works with any and all midi programs. But my
Ensoniq SQ-80 needs handshaking and other stuff.

The device plugs into the modem port. According to Cimple it
works very well with Notator but not so good with Cubase. They
are on 0181 904 4141 if you want further info.

John.

and speaking of Atari shows, what all is planned for Great Britain
and foe Europe in the next couple of months? I ask this because my
vacation is coming up and I need to start planning for it right now.
Are there any plans for another set of UK Atari shows in April in
Birmingham and London? (I need to know by Friday, as British Airways
has a seat sale which expires on that date, and I want to go to the UK
via Heathrow this time).

I would imagine Neuss is in Germany; if so, this
would make a very interesting trip. What are those dates?

Correct. CAB 2.6 and MiNTnet is an excellent combination :-)

> MiNTnet. They will only work with PPP-Connect/I-Connect.
> You will have to use MiNTnet emailer and newsreaders.

Or you can use GlueSTiK and STiK/STinG mail/newsreaders. I've tested
MyMail briefly and it worked fine with GlueSTiK. So does NEWSie.

> >Will it allow you to use all 4 tctip ports? (I was told Netscape uses more
> >than one port while displaying a page with lots of pictures on it, but I'm
> >not sure about this.)

Unfortunelately CAB doesn't allow more than one connection. CAB 2.6 comes
with a download-module though, so you can download stuff (only limited by
memory, as you need to run one copy of the downloader and CAB.OVL for each
download) while surfing.

My 200mhz 603e hardly makes Java pleasant to use either, the idea of cross-platform compatability is as good as lost when simple Java applications run more slowly than bloatware running under Win95 under emulation.

750. MiNT 1.12/Geneva/Neodesk video problem

Newsgroup: comp.sys.atari.st
Date: 1998-01-13 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <69gjnt$o2n$1@irk.zetnet.co.uk>
Source record: 110018

HI Folks,
I'm attempting to set up a MiNT/Geneva/Neodesk option on my Falcon.
The version numbers are MiNT v1.12, Geneva v6 and Neodesk v4.005.
The Falcon is a 14Mb with a 127Mb IDE HD and 170MB, 210Mb and 1.08Mb SCSI HD's, a CDROM and a Tandberg 3620 (?) tapedrive. There is currently a Clarity 16 lump plugged into the DSP port. The monitor ATM is VGA Multisync that using Nemesis and Videlity (Nemesis is not active BTW) is capable of 1280 x 960 but is currently running 640x480.
When I boot (using the Bootmanager Superboot v8) into a basic configuration, consisting of the Jar10 and Jar16 followed by MiNT, followed by Geneva, followed by Neodesk, as soon as Genva activates the screen becomes smaller than it was, and mono. As I have to manually point the way to Neoload ATM I do this, then go to <OPTIONS> <SET VIDEO>. It is set as ST High. I change this to 256 colours, double-line on and hit the <OK>. It comes back with a message about how some programs won't know they've quit (or something) and then it sort of stops. No Bombs, but no desktop either ie no Neodesk, no Geneva gadgets, just a blank 640x400 mono screen.
Has anyone else had this prob and if so what is the fix?When I run Geneva on top of TOS it comes up in the 640x480x256 I usually run....

Any help much appreciated, thanks.

PS I'm trying to do this in order to run CAB with all its modules without buying MagiC. It is supposed to work......I wonder if I could run Videlity on top of it.....Hmm....Nemesis, MiNt, Geneva, Videlity, CAB...now that's got to be a stable setup :-))

Probably the easist thing would be to dump MiNT and run STinG instead
of I-Connect. You don't need MiNT for CAB and CAB's modules to run,
just to run I-Connect which you can replace with STinG.

From: John Kolak <jkolak@jps.net>
Message-ID: <34BBE8B6.7F53CEC0@jps.net>
Source record: 110025

This is not quite accurate because failing to set the jumpers will only cause the 1.44 drive to be treated as a 720 drive. If the 720 drive worked okay after installing the AJAX chip, then the problem is in the new drive. If the new drive worked in the Falcon, then most likely you put the ribbon cable on upside down, or off a pin on the new drive.

Also, if you do not update the TOS, the Format High Density button in the dialog box will be inactive, but you can still read and write high density disks. You can use other formatting tools to format HD, such as Datalite or some versions of Diamond Format. Using this method caused me compatibility problems in reading and writing the disks on other computers.

>disconnects me. [snipped]

Well, it turns out that it wasn't a problem with STinG. After trying about 80 times and contemplating launching overripe tomatoes in the general direction of a certain campus in Germany, I decided to try a different tack. I reinstalled my HSMODEM and modules. I had a hard disk crash a little while back, and apparently it corrupted some or all of the package (although why that didn't make any difference with the earlier versions, or STiK, I don't know). Anyway, I apologize to Peter for any unkind vibrations he may have felt eminating from the northeast corner of the US. It's working - a little slow, and I'm having some difficulties connecting in CAB, but that's only because I'm using the default configuration.

From Sun? Sun has nothing to do with Javascript but with Java. This is
definitely not the same.

> Javascript is a subset of Java.

This is wrong. I suggest you have a look at the Java specification.
Javascript is not mentioned with any word there because Java is not
compatible to Javascript and Javascript is not compatible to Java.

Hi,

I'm writing this for a friend.

He is using Magic 5.13 (french) and has got a Falcon with AB040.
When he tries to open a window or click on a icon on the MAGXDESK
desktop he gets this message.

In french: "Appel aes 60 erronee"
In english: "Bad Aes call 60"

So, what is going on? Andreas? Anyone? He is desperat and needs
help!!!!

This won't matter as soon as JIT compilers are widely available. The
gain of speed is significant. And in one or two years new computers are
fast enough anyway. If you start developing a large application in Java
now, it will be fast enough by the time your project is finished.

> maintain two versions.

In my experience 030/040 binaries are smaller than pure 68000 binaries.
Atleast when compiled with gcc. E.g. NcFTP decreased from ~270Kb to
~255Kb, and another 10Kb when linked with 030-libraries.

Also, 040-binaries runs noticeable faster than 68000-binaries on my
Afterburner. With the increasing number of 040 and 060 machines
(Hades, Milan, Afterburner, MagiCMac...) I think it would make sense to
have a 030/040 optimized binary as well.

> Dunno why people keep thinking special 68030 ("32 bit") versions would
> improve things. Only very special tools can really benefit from the opcodes
> provided by the newer CPUs.

It's not only opcodes, lots of code can be optimized for the new caches
which makes them significantly faster.

Hi everyone....
(14 january 1998)

i just bought Magic 5.13 yesterday. I have got a falcon+AB040+16 Mo
TT-Ram (just one simm plugged) And after to installed (with success)
Magic (with the standard install program) i tried to start it.

so problems began....thus, any time i open a window or clic an icon on
the magic desktop, the following message occured (in french cause my
magic is french):

In english: "Bad Aes call 60" (In french: "Appel aes 60 erronee")

I don't understand what's happened :-((

i can just say, that if i move the vertical slider from a window, the
contain occurs, but not the first are displaying at the window's open.

The magic version is 5.13 and in French (of cours for me ;-))

PLEEEEEEASE HELP ME....i don't know what to do :-(((((((

> transmitting or downloading. :-/ ???

The keyboard (and mouse interrupt) has a higher priority than the rs232
interrupt. When RS232 packets are comming in with a high rate, a mouse
movement (=lots of mouse packets are send by the keyboard to the 6850
ACIA)
may cause some ignored RS232 interrupts resulting in lost bytes.

A faster computer or a lower baudrate may help. Some Z-modem programs
can
be configured to disable the mouse while downloading, prefeting the
problems
you are suffering from.

Bye, Hans Wessels

Hello,
I dunno if you can help me but...
I'm wondering if there are any help files on the internet anywhere
for C++. There will be some but I do you know where I can find them!

Also - Is there a C++ programme and for the atari - for so where
can I get it?

Thanks in Advance!
Take Care
Stuart

>Are there any plans for another set of UK Atari shows in April in
>Birmingham and London? (I need to know by Friday, as British Airways

I have just spoken with Mike Goodman and he has confirmed that there will
NOT be any more UK Atari Shows organised by him.

His other business commitments simply leave him with no time to undertake
the organisation of such events.

So the official news is that there will be no UK Atari Show in April this
year.

Whether or not there will be any more large scale Atari Shows in the UK
depends upon someone else coming forward, and enough support being given
in advance I would assume.

Sorry to be the bearer of such sad news, but that's life :-(((

Just as a matter of interest, is this inability to write restricted to one cart, a few carts, or do all of them suffer from the same problem? The reason I'm asking is that I had a similar problem a while back where, after changing carts, they became write protected, even though the notch said different.

I cured my problem with a cotton wool bud and a quick clean inside the drive, where the wp sensor is. It's quite amazing what a lot of dust can collect in there, especially if you change the carts quite often.

If you want to know how to clean the sensor, all you need to do is take the cart out of the drive, get a cotton wool bud and insert it into the very left hand side of the cartridge slot. It shouldn't/mustn't be inserted any more than 1/2 inch into the drive, and no more than 1/4 inch from the left edge of the flap. If you use a torch it makes it easier to see where you're cleaning. Then all you need to do is twist the bud on the sensors cover to remove any dust that's collected there, remove the bud and insert one of the tempremental carts and see if it's write enabled again.

There's the French MPEG Fever. It's able to construct and deconstruct MPEGs. It's available as 68k and '030 versions and seemed to handle the few files that I've shown it. I don't know what format's it can/can't handle since I've not really looked that hard into it. The only thing I can say is it's not too stable under Magic, even single tasking. I can't remember where I got it from, but I can mail you a copy if you want to try it. That's unless someone can come up with a ftp or web site for it.

> this in SOLO or MIDI? Should the PI? files be in a certain folder or
> something?

Yep, I play this sometimes, on two STEs at once. IIRC the 'WRONG RESOLUTION'
error was because of an incorrect setting when choosing the ships/players.
The game instructions don't give much help on this but what you want to do
is pick the ships by clicking on the name/alliance in the left hand column.
Then, if playing on one machine, click on one of the 'COMPUTER LEADER'
entries so it becomes 'HUMAN LEADER' (I think). Then click done and it
should load up the data files and play correctly.

If you're playing with a couple of machines, click the number in the node
column to choose the machine that hosts that ship.

BTW, with two machines the Romulans don't half batter the fed's something
rotten. On one machine it seems to be much more of a fair fight.

Hope it helps, and have fun :)

Under Magic 5 there doesn't appear to be any problems as yet with HD
floppies, although there have been a few discs that I've formatted under
Magic that had a couple of bad sectors. Magic didn't mark them as bad, so
I had to use CORRECT.PRG to do that.

One suggestion would be to format under Magic and get CORRECT to verify
the discs. You shouldn't really have to, but it looks like that's the best
way of doing things.

> 1.0? Can this be done with TOS2GEM?

This can't be done under any version before TOS 2.0? although if you use
a replacement desktop, ie Teradesk, this should give you the same
drag-and-drop features as TOS 2. In fact under Teradesk, you can set it up
so that when you drop a *.Z file onto the GZIP icon, it will auto-decompress
the file.

> >Start compress.ttp once more and typ
> >-d name_of_file_you_just_have_compressed_without_the_extension

I'd include the full pathname, including file extention. See below for the
reason why.
>
> I did, I do, I am typing the file to decompress as suggested.

> ANY File I have downloaded. I have a hard drive full of unzipped sounds:-(.
> I feel incompetent. I have done everything imaginable. It doesn't make
> sense. I must still be overlooking something simple?

One thing I've noticed about GZIP is that it seems to need the full pathname
for the .Z file. I had problems with it unpacking a file that was in the
same directory as the program itself, but as soon as the full path was given
it unpacked perfectly.

BTW, make sure you've got v1.24 of GZIP, that way you don't need
COMPRESS.TTP since it can both compress and decompress.

Possibly you've activated Van Jacobson Compression ? Either switch it off,
or get the newest SERIAL.STX from the MODULE.LZH which you can find on my
web page.

It's for falcon only, isn't it?
Or is there a ST/STE version available?

Tschuess,
Frank

KM>I have NVDI4, and included with it is a program called Makeprn. I've
KM>used it to create a new printer driver for a 24 pin printer, and I've
KM>saved it. Now what? Makeprn has a list of printers, but I do not see
KM>those printers anywhere in the NVDItools folder, or the GEMsys folder.
KM>When I saved the printer driver, where was it saved too? the
KM>makeprn.prg itself? How can I save the driver to a *.sys file so that
KM>I can use it? The docs with NVDI4 explain how to use the program, but
KM>not how to save a printer driver as a *.sys file.

It's in the PINPRN.INF or PAGEPRN.INF depending on your printer. There all the printers and the settings of Makeprn are saved. PINPRN.SYS or PAGEPRN.SYS are the drivers and use the *.INF for printing, there are only the settings for the pageformats.

Greetings

Johann

817. Re: TT with Crazy Dots

Newsgroup: comp.sys.atari.st
Date: 1998-01-15 00:00:00 UTC
From: Johann-Wilhelm_Arndt@HD.maus.de
Message-ID: <199801150239.a53594@hd.maus.de>
Source record: 109928

pettert@notam.uio.no on 10.01.98 wrote:

PT>I've got the drivers installed as described in the manual: CDMANAG is
PT>in the autofolder. I put it after NVDI, is that correct? I can't find
PT>anything about the running order in the manual. In the assign.sys file
PT>I have the drivers as: 05 CDDRV16.SYS 07 CDDRV256.SYS 10 CDDRV32K.SYS

Create a bootdisk with the following, i did that to boot without NVDI ET4000.
\AUTO\AMCGDOS.PRG ! Exact order is important.
\CDMANAG.PRG
\CRDOTS.INF
\CR_DOTS\CDCTRL.RSC
\GEMSYS\CDDRV16.SYS
\CDDRV256.SYS
\CDDRV32K.SYS
\CDCTRL.ACC
\VMG\...
\ASSIGN.SYS

ASSIGN.SYS with the following:
PATH = \GEMSYS\
01p screen.sys
02p screen.sys
03p screen.sys
04p screen.sys
05 CDDRV16.SYS
06p screen.sys
07 CDDRV256.SYS
08p screen.sys
09p screen.sys
10 CDDRV32K.SYS

Don't use NVDI (only NVDI ET4000 works). BTW did cdmanag come up with a screen
when booting, otherwise you should press SPACE when it starts.
Sometimes here it will start allways, but also i had to start it with the key,
why i don't know.
As mentioned before, try VGA.INF or maybe ES2624M.INF as crdots.inf, because
that's a 17" monitor with maybe the same data as yours.

Greetings

Johann

Check out my homepage if you need info about the Falcon and Cubase
Audio-compatible harddisks, or if you have a problem and need some tips
about solving it.
You can also learn more about me and my studio or read magazine articles
that I've written about the Falcon.

It's amazing - yesterday I reached 2000 visitors, something I wouldn't have
dreamed about a couple of months ago!

Swedish readers should check out http://home5.swipnet.se/~w-51781/service/
to find out which services I can provide, like repairing computers, making
CD's, selling Falcon music accessories and much more...

kma54@csc.canterbury.ac.nz wrote:

: Greetings all,
: CAB 2.6 and MiNTnet, do the two work well together? And just as
: importantly - does its news reader/pop3 E-Mailer work with MiNTnet also?

I don't use my Atari online but as much as people told me Yes.

: Is there a compiled 32-bit version of CAB 2.6?

Yes! Atari Computers use 32 Bit Software ever since they exist.

: Does it support progressive JPEG? (or is this dependent on the ovl file?)
: Will it allow you to use all 4 tctip ports? (I was told Netscape uses more than
: one port while displaying a page with lots of pictures on it, but I'm not sure
: about this.)

This would be perhaps an interesting thing for the OVL Programmers. Maybe in the
MiNTNet version it is possible to start a thread for each download and change
the file CAB gave to the OVL to a pipe, generate another file where the data is
also stored, create a thread that downloads the data and writes it as well to the
pipe as to the other file then moves the file to the filename that CAB handed over.
the original thread returns imediately.

I don't know much about the OVL Interface, but I know, that a file is given to
the OVL and the OVL has to write the Data into that file. Maybe one could give it
a try.

Christof

830. Serious questions.

Newsgroup: comp.sys.atari.st
Date: 1998-01-15 00:00:00 UTC
From: dzander@solaria.sol.net
Message-ID: <69l479$6g8@ns.sol.net>
Source record: 109941

I have three separate questions I am curious about. I would like to write some software and release it as shareware or freeware. Please give me your best estimate concerning the following questions.

1) How many users of AtariST computers are there who have Internet access? (at least email access)

2) How many additional people exist who own AtariST computers but do not have access to the Internet? (do not have email access)

3) How practical is it to release a software as shareware; what percentage of users pay the shareware fee?

I havn't made any super duper shareware titles, or any at all, but I
wouldn't expect much in return. I'm not saying that you wont get it,
it's just what I think. I would never write a shareware program for the
Atari or any computer and expect that I would get rich in the proces.

I think Thing is a rather popular shareware program and maybe Tomas
has got loads of cash, but I kind of doubt it. Ask him. :-)

Do it for the fun of it and not for the money. If you get some money for
it it's a bonus. :-)

If you want money I think you have to sell it as a comercial program
and maybe ASH can help you to distribute it. If it's a shareware
program sell it cheap and criple the demo and let one of the shareware
supporters sell it.

THE COMPUTER DUNGEON is proud to announce that we are handling the North American distribution of the fantastic NEW Falcon030 game: RUNNING!

Great graphics, FAST speed, and incredible challenge await you in this new 1st person shooter from RDT Software. Similiar in gameplay and style to such classic games as Doom, Duke Nukem, and Wolfenstein 3D, Running takes full advantage of the Falcon and offers huge levels, awesome weapons, multiple enemies, and secrets to find.

To find out more about Running, or to download a demo version or to place an order, visit our Web Site at:

http://www.mcs.net/~isis/dungeon/dungeon.htm.

World wide ?...Sorry too difficult to answer for anyone IMHO
>
>2) How many additional people exist who own AtariST computers but do not
> have access to the Internet? (do not have email access)

In the UK more people do not have Internet acces than do,
>
>3) How practical is it to release a software as shareware; what percentage
> of users pay the shareware fee?

This realy depends on what you are thinking of making?, Games?
applications?, Internet software? what?, no one could answer this
without knowing the type of software,
Will your software be something new that we don't already have,
remember we have been around for longer than most and just about
everything has been made, although always looking for new stuff if
thats what you have ?, If its something we already have then is yours
going to be better, in fact so much beter that we dump the tried and
tested stuff in favour of yours?

there are opening and space out there if you have something the
ATARIan wants, so don't let me put you off :), but to answer your
question 3 (the important one) then we realy would need more info :)

IMHO the ATARI is a Hobbyist platform and not the place to make your
fortune :)

>english docs included because my french isn't good enough.

I have finished the three Ishars and they are all with langage choice
at the beginning: french * english * german

These are really nice games but the third one is very difficult and
also surely the best with the nicest graphics ... and do remember I was
using the ST versions ... not falcon version ... One day I saw the
Falcon version of the Ishar Part 2 and really it was even nicer than
the ST version ... the st version was able to display 32 colors ...
rare enough to applause this fact, but the Falcon version is supposed
to display 256 colors !

Very nice games ... you will spend a LOT of time on the third part
which is enormous ... If you need help in the future, I have notice
all the difficulties in the three parts of the game when I encoutered
them ... you also MUST ABSOLUTELY draw your way because otherwise you
will be lost as fast as you begin the game.

Jo

My only regrets are these games don't run at all on my TT030 now ...
thought the games were STE compatible ...

843. Looking for some advice on a NEW Atari

Newsgroup: comp.sys.atari.st
Date: 1998-01-15 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <69ljrfcng1@news1.radix.net>
Source record: 109954

I'm interested in getting an Atari equipped with a 030 or 040. Most likely will get a Falcon (hopefully this summer at the Atari show in CA if it ever materializes). I already have 2 1040 STs with a Meg, a 520 with 2.5 Megs, and a 1040 STE w 4 Megs (+ 2 Mega STE Motherboards) and I ran a BBS on the machine for a little over 4 years so I would like to think I am pretty knowledgeable when it comes to the machines.

My interest lies in getting a Falcon030 and adding a Afterburner 040 and a Nemesis to it, and most likely having it run both Linux (Linux on Intel is boring!) and Magic. Now my main question is, is it worth it? Should I try to get a Falcon, or should I try to get my hands on a Medusa/Hades or Milan (RSN!)?

What should I expect to pay? I know the Nemesis board costs around $100 US, but I am unsure of the cost of the Afterburner 040 (RC version) since no one in the USA seems to distribute it, although I could be wrong. I think the only site I found advertising both boards was Titan in the UK.

And which Falcon should I try to get? The Atari version, or the C-Lab version? Internal IDE is great, external SCSI would help too. I already understand that the machine would be destined for a Tower case too, no more 1040 style case.... Which brings up another question, where to get such a beast. System Solutions does not seem to have that on their web page anymore.

(Ethernet would be nive, but plip or slip/ppp though a null modem type cable at high speed would work too.)

Any sites on the internet that have detailed pictures of the Falcon? I have looked some, but have had no luck as of yet.

Thanks!

Keith

Do you want me to e-mail it to you? It's quite small.

> For some mysterious reason (for me at least) pppd redirect the output
> to the screen although it shouldn't do this at all.

Well, it do what it's told to do. For no visible output, redirect it to
/dev/null in syslog.conf. Anyway, I like the console output when it
displays in a virtual console, or in a gem window ;-)

> >> Dec 26 22:45:56 ping1030 pppd[26]: pppd 2.1.2 started by root, uid 0 >
>> Dec 26 22:45:56 ping1030 pppd[26]: warning: not in tty's process group <149>Dec 26
22:45:56 pppd> [26>]: Connect: ppp0 <--> /dev/console

Do you have this only with connex? If positive, i didn't know it was
supposed to "touch" the port. Maybe it needs ttyb? Dunno.

> AFAIK I didn't remap the modem2 port to ttyb. In fact I don't know how
> to do this at all.

You can change /dev/modem2 to /dev/ttyb in your ppp14.4 file and add these
lines in your mint cnf:

```
ren u:\dev\modem1 u:\dev\ttya
ren u:\dev\modem2 u:\dev\ttyb
ren u:\dev\serial1 u:\dev\ttyc
ren u:\dev\serial2 u:\dev\ttyd
ren u:\dev\midi u:\dev\ttye
```

This cover almost all ports.

> My modem2 port works otherwise very well with my usual MiNT/mintnet
> setup.

I know, i used it a while ago with my falcon, just before the kgmd
installation ;-) And connex did not exist at that time, so i can't really
say. Maybe you can e-mail the author on the subject?
If i were you and if i really want connex to work, i'll have a try with the
tty's.

> still configurated for my TT. Maybe just maybe Connect can't get away
> with the serial.cpx I was using during the try-out. I must check this.

Do you mean the serial.cpx from Peter R.? I can't use it on my setup, the port is already in use??? No problems with the fserial.cpx, though.

> This is my mint.cnf

> PPPD_PATH U:\usr\etc\pppd

Is this not redondant with the $PATH env?

> setenv TERM xterm #---> probably not needed at all?, a remain of the X-window setup

I have atari set in here. I can't say which programs use this ;-)
I personaly set this in a $HOME/.tcshrc file, used after login.

> setenv NOS_ROOT=D:\OASIS

NOS do work with mint/mint-net?

> Also I get a "CCP: timeout sending Config-Requests" message in my syslog
> file. Any idea why?

I remember of a -bsdcomp and a -pred1comp option for pppd (/etc/ppp/options)

> I've installed tcsh as an application to execute my dial script
> "ppp144" so whenever I double click on ppp144 tcsh come up in a
> toswin2 window and execute the script.

That's exactly what connex do, call pppd with a script.
Bye, bye Martin.

You'll find thousands of matches if you use one of the search engines,
although you might prefer to just subscribe to comp.lang.c++ where
they post a faq every week iirc.

Frankly though, you'd be better off getting a book from your local
library to start off with.

Date: 1998-01-15 00:00:00 UTC
From: Roger Schuster <webmaster@karst.net>
Message-ID: <34BE6C75.2EC11E42@karst.net>
Source record: 109961

Hi all,

I am re- animating my good old Atari 1040 STF and would like to use it
with my (class 2) 14.4 modem as a fax machine. The software must be able
to deal with text which contains the special charakters of French,
German and Spanish language (the nice ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ signs, you know...).

Does anybody of you know a fax software which could do this job?
Probably a shareware product on the Net?

Please e-mail me directly because I don't read usenet news regularly.

Regards
Roger

I use an old shareware program called midimover, which was put out by hybrid arts. (Someone else now handles their stuff-- sequencers like EZ track, Sync track, etc.). Let me know if you can't find anything to use and I'll send it to you. It _should_handle files from your PC. I'm using it to convert my old atari files for use on a mac.

The lockup is most likely because some program that is is running
(probably a desk accessory) doesn't like to have the resolution switched
on it. The best thing to do in this case is to boot up without any DAs
running, set the rez the way you want it, and Save Settings in the Task
Manager.

I think I probably still have a module or two kicking around, if you want to buy one. Send me some private email.

Just so nobody gets confused, this module is only needed for the original Crazy Dots VME or STe. It adds 15-/16-bit video capability to the card, which would otherwise only do 256 colors. This module is not needed if you have a CD II.

This is a call to all you loyal Atarians out there, good and thoughtful people that you are.

One of the last known dealers in the Atari world is in need of your help! Alex Yu of ATY Computer in Oakland, CA was robbed at gun point and lost most everything in his shop. Alex was not physically hurt, but he lost all his PC and Atari computer components, his diagnostic equipment, tools, IC chips, memory chips, etc., etc..
Alex doesn't have insurance for his shop because he can't get any for his area.
Alex is one of the last known Atari dealers in California, if not the USA. He also repairs and does upgrades in the Atari world as well as builds and repairs PC's. With the loss of this equipment, Alex is in dire straights to make ends meet both professionally and personally.

Alex wrote to me and asked if I would post something on the internet in the Atari related area and...."see if anyone out there would help out the last dying Atari dealer to get back on his feet."

If you can help or know someone who can, you can contact....

Alex Yu
ATY Computer
3727 13th Avenue
Oakland, CA 94610
voice and fax (510)482-3775

This is a call to all you loyal Atarians out there, good and thoughtful people that you are.

One of the last known dealers in the Atari world is in need of your help! Alex Yu of ATY Computer in Oakland, CA was robbed at gun point and lost most everything in his shop. Alex was not physically hurt, but he lost all his PC and Atari computer components, his diagnostic equipment, tools, IC chips, memory chips, etc., etc..
Alex doesn't have insurance for his shop because he can't get any for his area.
Alex is one of the last known Atari dealers in California, if not the USA. He also repairs and does upgrades in the Atari world as well as builds and repairs PC's. With the loss of this equipment, Alex is in dire straights to make ends meet both professionally and personally.

Alex wrote to me and asked if I would post something on the internet in the Atari related area and...."see if anyone out there would help out the last dying Atari dealer to get back on his feet."

If you can help or know someone who can, you can contact....

Alex Yu
ATY Computer
3727 13th Avenue
Oakland, CA 94610
voice and fax (510)482-3775
email: atycom@pacbell.net

Thanks for your consideration and help

I have an Atari SC1224 color monitor that I want to sell.. $40 + s/h
(Will entertain offers and trades)

I'm cross-posting this in comp.sys.amiga.marketplace because you can use
this monitor on the Amiga with a simple converter. (Self-made hack, or
with an inexpensive cable) It offers a clearer picture than the 1084.
Not sure if it handles PAL though.

There can be a little saved memory with heavily optimised code, if 68030
opcodes are used. I understand Gnu C is capable of such heavy optimising
(it must be doing something during the ages it takes for it to compile
anything ;-)), but *very* few other compilers are. Pure C certainly isn't,
I do not think Lattice is significantly better in this respect.

> Also, 040-binaries runs noticeable faster than 68000-binaries on my
> Afterburner.

Would be interesting to have real measurements here. All measurements I've
done revealed little more than a few precent of speed increase, 5 at most.
Not worth going through the trouble of maintaining two versions, IMHO anyway.
This is well understandable as the improvements of the newer CPUs are mainly
an optimised architecture, optimised instruction microcode, and better and/or
larger cache. All this speeds up 68000 code just like it does 68030 code.

Often I meet people who have been very impressed by the speedup of some new
machine, then measurements reveal it's only one to two percent, which is not
noticable by humans. Amazing how powerful imagination can be sometimes.

Not claiming here that your statement was imagination. There can be situations
where the speedup is great due to some minor improvement. Consider the case
where the 68030 code in some loop is just one percent smaller than the 68000
version, but this just was the rest that prevented the 68000 version from
fitting into the cache completely. Of course, this makes a huge difference.
But this is a situation that is far from common amongst general software.

Cheers Peter

In english, lots of more people would contribute their ideas. IMHO it's
rather unpolite to post in a language different from the established one
in a newsgroup.

"Sub-Bright" is probably the wrong pot anyway. Try to get hold of some fast
CRO (40 or 60 MHz at least) and compare voltage levels on some relevant
joints with the ones shown from a properly working SM124. I probably do not
have any better diagrams than you have.

Cheers Peter

I just partitioned a new drive with HDDRiver 6.0 . I created
partitions which are 514 mb on my TOS 4.04 Falcon and used the
minimum sector size option. The problem is Diamond Edge and Knife ST
don't seem to like the new partitions. Knife crashes and halts
the drive when I try to search a file. Diamond Edge finds a bad
cluster. Noedesk also is confused about cluster size, reporting
it as 16384-32767 (on 2 lines).

My question is, is the problem the partitions > 512 mb or the
minimum sector size or both. I cab begin experimenting but
restoring the partitions from backup is slow work.

Any ideas?

That's not uncommon. If you're using a 115,200 DTE rate, you'd do better with a 57,600 DTE rate, though your compression would suffer slightly.

867. Possible AC UK Atari Show in Summer '98

Newsgroup: comp.sys.atari.st
Date: 1998-01-16 00:00:00 UTC
From: mike@ataricomputing.com
Message-ID: <69nq83jvn4@chlorine.compulink.co.uk>
Source record: 109840

Possible UK Atari Show:

Atari Computing magazine may be in a position to organise some form of Atari Show/Convention in early Summer of this year.

Obviously such a show takes a lot of organising and is also very expensive.

Therefore it is not something we could afford to waste time and money on if it wasn't going to be well-supported.

My view is that we could only go-ahead with such a Show/Convention if we sold enough tickets in advance to cover the costs. To just hope that enough people will turn up on the day is a non-starter TBH.

Anyway, I'd like to get some ideas and thoughts coming back to me, so I'll ask a few questions and ask everyone that is interested to comment here, but please send actual question responses to me via email to avoid cluttering up the group.

1) When is your preferred weekend & month; June/July/Aug/Sept/Oct/Nov (please give exact dates if possible

2) Preferred day; Saturday/Sunday

3) Preferred location; Birmingham/London

4) Method of transport; Car/Bus/Train

5) What sort of admission price would you pay? (3.00/4.00/5.00 ukp)

6) What would you like to see at the Show in order of preference? (demos/tutorials/sales stands/anything else?

7) What is your main interest; DTP/Music/graphics/?

8) Where will you be travelling from?

9) Further ideas/comments

Many thanks to all that respond. I'll post a summary of what is sent to me in due course.

Basically, unless we do get a reasonable level of prior support AC will be unable to organise an event, so this is everyone's chance to ensure that there will be a show this year in the UK!

Best regards
Mike Kerslake

Well then you have missed quite a few software titles :-)

They had a few games for the Falcon, mostly games for kids.
They were responsible for the M&E system which is a very
comprehensive set of libraries fo you to include into your programs.
They could handle about anything you would like from digital cameras
to scanners, printers, fileformats, animations, you name it.

They had also some other programs like a graphics program and a very
nice D2D recording application for the Falcon called Quincy.

I have probably forgot quite a bunch of other titles. They did also
distibute alot of other applications for other companies.

You could have checked out their webpages at www.parx.fr, but as I said
they are all gone now together with the company itself.

CAB 2.6 and MiNTnet, do the two work well together?
does its news reader/pop3 E-Mailer work with MiNTnet also?

You need to use the CAB.OVL designed for MiNTnet. Get it at:
http://www.highlandsun.com/hyc

The bundled FTP and Mail/News client only work with ASH's I-Connect.
There are several good MiNTnet clients out there or, using GlueSTiK,
you can also use clients for STiK/STinG on MiNTnet, instead.

Is there a compiled 32-bit version of CAB 2.6?
Does it support progressive JPEG?

Alex stopped producing 030 versions since CAB 1.5 afaik.
JPEG.OVL can handle progressive, but won't display them progressively.

Will it allow you to use all 4 tctip ports?

Last I checked, CAB's OVL interface only allows for a single connection.
Perhaps this could be changed, so that a capable CAB.OVL could utilize
all 4 of MiNTnet's PPP/SLIP channels. Is Alex listening? ;-)

875. Zip Plus SCSI woes

Newsgroup: comp.sys.atari.st
Date: 1998-01-16 00:00:00 UTC
From: Ben Hall <cb170@city.ac.uk>
Message-ID: <Pine.GSO.3.95q.980116183145.11595C-100000@paddington>
Source record: 109848

Hi Guys,

So after a story too long and frustrating to relate here (let's just say I'm never buying anything from PC World again), I finally have my Zip Plus connected to my ST, but nothing works yet :(

My system: Atari --> Link 2 --> SystemSolutions MiniS --> Zip Plus
^
|
(via it's "autodetect" cable
and an Iomega 25-to-50
adapter from Maplins)

With the Zip Plus plugged in to the MiniS (even with the Zip not turned on), the ICD driver software doesn't even register the Link as connected, and neither drives work. Unplug the Zip, and the Link/MiniS works fine. (MiniS SCSI ID 1, Zip ID 5)

Now I'm pretty sure I ordered a Link2 - anyone who has one, does it say "The Link2" on it, or just "The Link"? Mine says the latter, which made me think that maybe I have the first one, which doesn't support parity, and can't be used with the Zip. (When I originally ordered the Link+MiniS drive I had to wait about three months because SysSol didn't have any Link's left, and I was told that the ones that were coming in were Link 2's, and that I would get one of those with my drive.) The ICD floppies (v6.5.5) have "The Link, The Link2" written on it, and HOST.TOS registers the host adapter thusly:

> ICD Determine Host Adapter Type Version 2.08 Copyright 1994 ICD Inc.
>
> ID Drive Type Adapter Type
> --
> 1 MAXTOR 7213-SCSI Link/AdSCSI/AdSCSI Micro

The Zip Plus (apparently) sets it's own termination automatically, so I dunno how I can access and therefore test this. The MiniS has no termination settings on the back panel, and I've never figured how to open it up to see whether there's any jumpers in side, so that draws a blank too. I don't have the necessary leads to connect the Zip directly to the Link and bypass the MiniS, so I can't try that either.

Leaving aside defective equipment, I can only think that it could be the Link or the MiniS termination settings causing the problem. So, anyone got any ideas..?

Ta muchly,

When I added a normal zip drive to my falcon at the end of the scsi chain I had problems.
I don't know if this is correct but in my case it seemed the termination on the zip didn't work (even with the switch set to on).

The solution was to swap my cd drive and zip drive over so the termination was on the cd drive.

878. 520STfm internal floppy?

Newsgroup: comp.sys.atari.st
Date: 1998-01-16 00:00:00 UTC
From: mdwright@mail.ponyexpress.net
Message-ID: <69odlm$4k7$1@doc.ponyexpress.net>
Source record: 109851

My recently acquired 520STfm doesn't seem quite right. The internal floppy
will read a 720 disk, GEM displays the filenames, but I can't start a program.
It will display some text files, but trying to start a PRG or APP gives message:
"Drive A: is not responding. Please check the disk drive and insert disk."
This is with various shareware downloaded to PC, unzipped to 720 disk,
which was formatted with dos 3.3 on a 720k drive.
Got a similar message trying to run Word Writer ST and some other
commercial software, but it may be no good (Salvation Army software).

Tried to format a disk, chose double sided option, got message:
"An error has occurred during format or copy. Target disk may be unusable."
Chose single sided option, disk formatted fine, but PC won't recognize it.
Ran a drive cleaner "disk", no change.
Questions:

1. Is this a 360 drive acting correctly, or a 720 with a non-reading head?
(It did offer the option of formatting double sided)

2. If it is a 720 drive acting up, does a fix spring to mind, short of
replacing the drive?

3. If it is a 360 drive, how do I format a single sided 3.5" diskette on a PC?

thanks in advance,
Mike

Well, what I meant was that nowadays the web is taken over by commercial
sites full of Java, WAV files, Quicktime movies and other shockwave thingies
taking up all the available bandwidth without adding much value as far as
information goes. As opposed to the good old days when text only
applications used to fly and there were A LOT less AOL newbies and spammers.
Just a bit of nostalgia on my part, nothing to get all worked up about ;-)

Not being a Notator specialist I can't tell for sure, but It surely can record sysex just like any other MIDI message (note on/off, modulation, etc...).

The problem more likely resides in the MIDI unit you are using, ans as you didn't state what it was, I suppose we can't be of much help.

>Questions:
>

Just a question : are you sure you are using DD floppies, not HD ones with tape over the HD hole to trick the drive into thinking they are DD. This causes problems like what you describe.

Another cause can be byte rot. The magnetic coating on disks gets old and no longer retains the data written on it, but if this is happening to all of the disks, then it's more likely a faulty drive.

>1. Is this a 360 drive acting correctly, or a 720 with a non-reading head?
> (It did offer the option of formatting double sided)

Then it should be a DS drive.

>
>2. If it is a 720 drive acting up, does a fix spring to mind, short of
> replacing the drive?

Yes, get rid of the drive and replace it with a PC one. It's an easy and cheap modification. There's info about how to do it in the Quick FAQ (see my sig).

>
>3. If it is a 360 drive, how do I format a single sided 3.5" diskette on a
PC?
>

Well, if it an old PC with a DSDD drive, it can be done in DOS (can't
remember the syntax though), but most new HD drives can't work in SSDD
(360K) mode.

AAMOI...

In the course of investigating this subjest I dug out the original manual for my Mega STE and noticed the pin wiring for the different serial ports: Modem 1 and Modem 2 did not have a full set of RTS CTS and CD... so here's the rub: how are we using Fserial cpx or the ~/ppprc or whatever to set RTS/CTS flow control, let alone detecting a digital data carrier?

Have I missed the point here or what?!

Any thoughts?

I think you're mixing things a bit here. The four ppp/slip channels you're talking about is the number of *physical* connections possible with this interface. A client can establish a unlimited amount of connections though.

It's probably a 360k drive.

>
> 2. If it is a 720 drive acting up, does a fix spring to mind, short of
> replacing the drive?

The belt fell off my 360k drive recently. I just opened her up a slipped it back on. Worked like a charm. It doesn't sound like your problem though. You may want to try cleaning the heads or head of your drive with rubbing alcohol. Not only will it possibly fix your problem but you'll be able to determine what type of drive you have.

1 head = 360k drive
2 heads= 720k drive

>
> 3. If it is a 360 drive, how do I format a single sided 3.5" diskette > on a PC?

You can't. You'll need a 720k atari drive or an old 720k PC drive.

>
> thanks in advance,
> Mike

My 520stfm came with an internal single sided double density (360k) floppy drive but its possible that latter models came with a 720k drive. GEM does give me the option to format double sided double density (720k) disks even though my ST didn't come with a drive capable of formatting one. As far as transferring files to and from a PC is concerned, you'll need a new 3 1/2 drive. The 1.44 drives in most newer PCes are no longer capable of reading 360k disks. You'll have to either get a 720k drive for your ST or an ancient 3 1/2 720k drive for your PC. I'd go with the Atari drive myself. Since Atari internal 720k drives are hard to find without another ST attached to them :) , it would probably be easier (and cheaper) to get one of the external variety. Atari made them as well as a few 3rd party companies. They just plug into the floppy port on the back of your ST. Easy. Now that I think of it, you'll need to get a 720k drive anyway. A lot of ST software (like your Word Writer ST program) only came on 720K disks. I hope this helps.

-Liam Busey

892. USA: you-ship-it free or nearly free Atari hardware/software

Newsgroup: comp.sys.atari.st
Date: 1998-01-16 00:00:00 UTC
From: benles@powernet.net
Message-ID: <benles-1601981430180001@p1-2.reno.powernet.net>
Source record: 109865

```
Free or nearly free Atari hardware/software
-----------------------

1) Free monitor
2) Falcon030 for trade
3) Free 1x CD-ROM

====== 1 ======

FREE SC1224 12" RGB monitor to the first person who wants to ship it to
him- or herself. Works fine, but the case is slightly melted from one hot
day in the car long ago :)

====== 2 ======

I will trade my Falcon030 14/80 for the latest version of MagicPC and the
English version of MagicMac 5 (which works on System 8). Gemulator 98
with TT ROMs may be substituted for MagicPC. Instruction manuals are a
must, warantee cards are desired. You pay shipping. I will even ship the
original 4 MB SIMM that comes with the Falcon. I've removed the internal
speaker, but I can re-connect it at your request. I'm open to other
trading ideas; the bottom line is that I don't have room to keep the
Falcon.

Commercial software included:
* Diamond Edge
* HD-Driver 4.x
* Latest versions of Geneva and NeoDesk, and compatible MiNT
* AtariWorks (with cool timelog, billing, and checkbook databases I made)
* NVDI (latest, I think)
* MultiTOS
* SpeedoGDOS
* Rainbow (art package)
* ExtenDOS
* "Language" disk (note: "System Audio Manager" (SAM) is NOT on here,
my Falcon got shipped without it.)

Shareware/Freeware/PD software, unregistered:
* Everest (latest version)
* Address
* MpegDSP
* CPU MOD
* Paula
* Multi-Saver (registered, I made it!)
* CoNnect
* JPEG DSP viewer
```

* Speed of Light
* Shower (picture shower)
* Look'n'See
* CAB
* If I can find it, the "All Things Falcon" CD
* STiK
* STiNG

Special notes:
Two of the little rubber plungers on my keyboard wore out, so I had to move them to keys I don't use very often (keys duplicated on the number pad). All the keys work provided you have working little rubber plungers. I haven't been able to find any.

You might know, but the 14 MB RAM is actually a 16 MB SIMM.

The original internal metal casing has been removed because the 14 MB upgrade won't fit with the casing on. The metal casing will be shipped too.

====== 3 ======

If anyone wants it, they can ship themselves the single-speed, external, SCSI NEC CD-ROM drive, which comes with the SCSI to SCSI-2 cable, otherwise, it will ship with the Falcon.

Uwe,

I repartitioned the drive into 441 mb partitions and the Diamond Edge problem went way. Knife ST doesn't bomb any longer but it has problems finding the end of a file. I switched to using DADE, which I've had for years but avoided.

My cluster size is now 32767. What would choosing the "minimum sector size" option have done?

Greg

PS. I'll be upgrading to HDD 7.12 wehn Systems for Tomorrow gets it in. Is that fully Afterburner compatible?

I found that ST-Tools also has problems on my Falcon and SyJet 1.5
Gig drive. So I guess we now need a volunteer to create a new version
of ST-Tools, since I doubt we'll see an updated version of Diamond Edge.

================================================================================
InterActive supported software scheme 7th January 1998
--------------------------------------------------------------------------------
About the scheme
----------------

Since 1993 InterActive has offered a convenient way to register
non-commercial software. The scheme was launched by Joe Connor to
encourage 'foreign' authors to produce and support English language
versions of their software AND to encourage UK users to register 'foreign'
software.
InterActive continues to expand and currently supports over 50
non-commercial titles and 26 different authors and over 2000 registered
users. The authors deserve your support and feedback so if you're
regularly using any unregistered software please register today - you
nearly always get something extra in return:

- Key to remove features reserved for registered users
- Local telephone, post and email support
- Free update service
- No hassle handling foreign currency
- Labelled Master disk and registration letter

Registration fees are set to cover the currency handling, stationary,
media and postage costs incurred in mailing out master disks and providing
support.
Although primarily a UK support scheme everyone is welcome to register via
InterActive as an alternative to registering directly with the author/s.

The currently supported software is:

Version Software Fee Status and description
--------------------------------------------------------------------------------
v1.73e Kandinsky 16 [S] Vector art using GDOS/Speedo/NVDI3
v2.51e Kandinsky 2 30 [S] Upgrade from v1.73 costs 16 Sterling
v1.51e Two-in-One 13 [S] Archive manager, twin selector style
v4.8 GFA Flydials 13 [S] Enhanced GFA GEM routines [G]
v1.06e GFA Patch 6+ [F] GFA patchs for most interpreters/compilers
```

[ACC]=Accessory [PRG]=Application [030]=Separate 030 version
All prices in pounds Sterling! #=Fee recently reduced
==========

How to register from inside the UK
---
1) Use the included ORDER_FM.TXT to select the required software
2) Make sure your name and address is included and *legible*!

3) Make cheques/POs payable to InterActive for the total amount
4) Send the completed order form and payment to InterActive

Additionally from outside the UK

- Add £1 to your order total to cover postage
- Make certain payment is *in Sterling* drawn on a *UK* bank address
The following methods are known to work:
-Bank draft/cheque
-Eurocheque
-International Post Office cheque payable *in Sterling*
-Cash! Sterling, Dollars and DMs are fine -but at your own risk!

Country specific information

Canada: The Canadian Post Office can issue money orders in *Sterling*.
These are hassle free and inexpensive!
Australia: Australia Post only sell overseas money orders in US dollars
so please get a bank draft made out in Sterling drawn on a
UK bank address.
NZ: Please visit your Post Office and get a money order made out in
Sterling.
France: For some reason I'm getting a number of local cheques (i.e.
written in Sterling but drawn on a french bank address.
I can accept these but they cost £5 to negoiate so you must add
an extra £5 to your order total.
Europe: In general Post Office money orders or Eurocheques are the best
way to pay.
USA: What a nightmare! Can I suggest a day trip to a Canadian post
office? I've seen everything from Amex travellers cheques (add
£5 to order total), local cheques (no can do), cash (fine -but
at your own risk).
An International money order (add £5 to order total) made
out in Sterling drawn on a UK banking address is currently
the best solution, sorry! :-(

Contact

Mail: 65 Mill Road, Colchester, Essex, CO4 5LJ, England
Email:
Internet: support@inactive.cix.co.uk
Telephone: UK+(0)1206 852602 Leave a message on the answerphone!

Update service

By post

To receive an update send a self addressed envelope including return
postage (or IRC) and an unlabelled double sided floppy disk. Please
state clearly:

1) The software you'd like updated
2) The version you're currently using

How long will I have to wait?

Due to the number of people taking advantage of the registration
service and my other commitments as editor of Atari Computing I can't
always reply as quickly as I'd like to. Often I'm waiting for a new
version or simply too busy earning a living so please be patient!

If you have Internet access

Visit the InterActive websites which includes news and gossip about the
latest versions and downloads of all the latest versions via the web:

URL: http://www.cix.co.uk/~inactive/

If you have ftp access

Visit: ftp sofa.dartnet.co.uk
(195.26.32.14)
Login as 'ftp' and enter email address as password. The Atari files are
all stashed in the path: /pub/atari/interactive/

InterActive order form: Please print out/email this form to:
==========

902. atari mouse

Newsgroup: comp.sys.atari.st
Date: 1998-01-16 00:00:00 UTC
From: sandra gey <gey@slip.net>
Message-ID: <34C02F38.E19@slip.net>
Source record: 109875

I have a very early 520st. Everything is working but a 4 year old took the mouse apart and lost the plate which holds in the ball. I bought a PC mouse but the ST won't recognize it. Does anyone know how to attach a PC mouse? Does anyone know where to buy another Atari mouse, so the kids can get back to the games (Buggy Boy, Megaroids, and Major Motion are still the greatest.

hmm... I'm always saying this. Reda it everyone:

It's an art pakage which only works on the Atari ST.

It's around 80k as a UUEcode file, and sent as a TOS file (which is
around 60k long)

The drive icon or file icon must be highlighted by clicking on it once
with the left mouse button before the operative selections will be
non-grayed. Double click to open the drive and get a window on the
files.

My Mitsubishi Diamond Scan that I had hooked to my TT has a switch on the back to switch between analog and digital (in case someone was running CGA/EGA instead of VGA). If your Mag has been used on the TT or a modern PC, it should already be set to analog (unless it was disturbed in moving it). Check to see if the monitor works by trying it on another VGA capable computer, or plug it into the TT VGA video connector instead of the Crazy Dots connector. You will have to disable the Crazy Dots video card driver for the TT VGA port to work. This is best accomplished by forcing a boot from floppy with the <alt> key held down when the floppy light comes on at boot time. Also, you won't get a picture from the Crazy Dots if the driver is not activated at boot up, so maybe you will get a picture from the TT video jack, and then you can check the auto folder for Crazy Dots drivers.

: I try to get a Falcon, or should I try to get my hands on a Medusa/Hades or
: Milan (RSN!)?

It seems to me that really the only advantage of the Falcon would be the presence of the DSP. If you don't need this particularly, then get a Medusa/Milan/etc and you'll end up with a faster computer with much better graphics capabilities and standard ISA and PCI card slots. Remember you can still get sound on these machines by using a common Soundblaster sound card.

: (Ethernet would be nive, but plip or slip/ppp though a null modem type
: cable at high speed would work too.)

Well if you get a Medusa, Hades, Milan or similar then you should be able to use a common ISA or PCI ethernet-card, provided drivers are available for it. While I'm not familiar with this area, I believe that many ethernet cards are compatible with each other, which would mean that it might be simple to make one driver that supports most common cards. However, I don't think such a thing has actually been done. (If I had one of these machines I would be doing this myself.)

Terry,

Try replacing the TCP.STX module that came with the latest release of STinG with the TCP.STX module from the previous release. This may very well speed everything up. I had the same problem and this was the "fix" that Peter suggested.

Steve

Atari have gone through a lot of trouble and their console "Jaguar"
failed badly.

Last I heard they moved over to converting their arcade titles to the
PC.

I also heard that some engineers are working on a mystery project, and
Jeff Minter (who wrote Tempest 2000 for the Jaguar), says it's
incredible...

Does anyone have anymore information?

The problems seem to be Diamond Edge and Knife ST. The maximum allowed
cluster size is 32768 bytes. Partitions > 512 MByte are perfectly legal
on TOS 4.04.

And the cd-version has a great introduction. It's nearly the same as with Robinson's Requiem. I own the cd-version and it is fantastic, no comparison to the disk version.
O.K. The gameplay is exactly the same but the intro and the dialogues are brilliant.

And as a nice bonus you get the ms-dos version for free. ;-)

The Hades040 is almost exactly as fast as the Falcon+AB040 in computing
power. Graphics will be faster on the Hades if you havn't got a Nova
card
in the Falcon.

Also, can you realy use a Soundblaster card in the Hades? I thought not,
atleast not yet.

There are atleast two drivers for different ethernet cards for the
Hades.
These should also be ported to the Milan when it's available.

Well I have got a Falcon+Afterburner040+Nova-card. This is a very nice
machine indeed, but buying it all will cost pretty much. If you already
have a Falcon I would recomend upgrading it but buying a complete system
wouldn't be cheap. Ask Titan Design if they can sell you a complete kit
with
a Falcon MK-X and Nemesis+AB040 already fitted. They should be able to
give
you such offer. If it's reasonable priced get it. I'm not sure what it
would
cost to ship it to the US, but atleast ask them for a offer. I would
guess
it would cost more than a Milan though and about the same as a Hades040.

The Milan is just a bit more expensive than the Falcon but gives you
more options and the power of a Falcon+AB040. If you are after the DSP
you havn't anything to choose between right now so you would have to get
the Falcon combo.

But as I said. If you had already owned a Falcon in a tower I would go
for the AB040 combo if not, get a Milan. The Hades is way to expensive.
The Milan will cost less than half of the Hades.

>larger cache. All this speeds up 68000 code just like it does 68030 code.

Try CAB 1.5 on a Falcon or TT, then try the 68030 version -- the
difference is quite dramatic. On the otherhand, I've tried other 68030
program binaries that weren't really different from the 68000 versions. I
never did do any benchmarks with CAB 1.5 (formatting a complicated table
would be a good test), but it 'seems' faster. If it's only 5 percent more
then it's a nice 5 percent <g>. I'm not a programmer, though -- just
someone watching their screen redraw. Even though Alexander Clauss rewrote
CAB 2.xx to handle tables much, much faster (better code), I wonder if the
speed increase of a 68030 version would be as dramatic as with 1.5.

This is no 030 version. The version you mean is for 68020/30
and(!) FPU.

But believe me, there would be no speed improvement for CAB 2.x
when using the FPU. I've send a special FPU version to a beta tester
to test it on his TT and he reported the the FPU version was about
0% (zero) faster. This is what I've expected, because CAB uses
no floating point arithmetik in its routines.

> would be a good test), but it 'seems' faster. If it's only 5 percent more

Yes, I know. Some people reported that cetratin versions of CAB
were faster than the previous. But In many case I've changed nothing
which could cause any speedup. The reason why it seems faster was just
a better looking interface, some nice new features and so on (that
means, the people are more satisfied with CAB and so the whole
product looks more positive).

> then it's a nice 5 percent <g>. I'm not a programmer, though -- just

You would not be able to notice these 5%. Otherwise you would be able
to 'feel' the difference of about a half second when the formatting
of a page needs about 10 seconds.

> CAB 2.xx to handle tables much, much faster (better code), I wonder if the
> speed increase of a 68030 version would be as dramatic as with 1.5.

It is about 0%

I know GSZRZ doesn't suffer from this, if you turn the mouse interupts off.
With them off, the speed seems to go up from 2900-3000cps to 3100-3200cps,
with 3600cps acheivable with text downloads. That's with a 8MHz STE and
upgraded serial port running at 38400bps.

Another thing, since using Magic v5, I don't get any problems with lost
modem data at 38400bps, unlike TOS 1.62. It appears that a lot of the
problem is down to TOS being too slow at handling the interupts to be a
reliable option for high speed comms, with or without HSModem.

It certainly looks like Magic is at fault. Then again, if your using Kobold
it doesn't really matter since it will mark any bad clusters it finds as
it format's the disc.

> I'll look into using "Correct" next time I need to use floppies (I barely
> use them nowadays, but I had to back up some files from my harddisk the

I still use floppies quite a bit, but I do it to keep a good proporion of
my HD empty. Apart from anything else, it keeps the programs I'm not using
much out of the way. If I need them, in goes the disc, and back out when
I'm done. The other use is for transfering to and from a friends Acorn, and
a PC I sometimes need to use.

> Does anyone know if there is a patch for MagiC 4 to fix this? A quite
> serious bug in my opinion.

I don't know if I'd call it a serious bug, major annoyance more like. Then
again, I'd like someone to write a patch so that if there is a disc fault
while I'm writing to disc, the cluster that's bad is marked as such, and
the writing continues with the next free cluster. It's a nice dream, but it
may eventually become reality.

If anyone is looking for a good scoring package for your Atari, check out Proscore 1.9. A demo is available on my web page at:

http://www.pressenter.com/~tkelly/

Very early versions of Proscore made the PD rounds several years ago, but I've since upgraded the program to take advantage of scalable fonts, higher resolutions, etc. Good scoring programs for the ST are expensive and often are a part of big midi packages. Proscore is designed to be a stand alone "note" processor and can produce complex, professional scores after a short learning curve.

Hi Greg,

>I just partitioned a new drive with HDDRiver 6.0 . I created
>partitions which are 514 mb on my TOS 4.04 Falcon and used the
>minimum sector size option. The problem is Diamond Edge and Knife ST
>don't seem to like the new partitions. Knife crashes and halts
>the drive when I try to search a file. Diamond Edge finds a bad
>cluster. Noedesk also is confused about cluster size, reporting
>it as 16384-32767 (on 2 lines).

The problem is that Diamond Edge can't handle larger partitions than 512MB
(which comes to 8kB sector size when you use the "minimum sector size"
option). If you make larger partitions, the sector size becomes 16kB, which
can't be handled by Diamond Edge (or Cubase Audio for that matter). If you
use HDX for your partitioning, you can't even use larger partitions than
256MB if you want to keep the sector size to 8kB, since you can't choose
"minimum sector size" like in HDDriver.
If you need to defragment larger partitions, use the old CHKDSK3 instead - I
know several people who use it on their Cubase Audio systems all the time
without any problems.

Best regards,
Claes

Hi there,

>My system: Atari --> Link 2 --> SystemSolutions MiniS --> Zip Plus

>With the Zip Plus plugged in to the MiniS (even with the Zip not
>turned on), the ICD driver software doesn't even register the Link as
>connected, and neither drives work. Unplug the Zip, and the Link/MiniS
>works fine. (MiniS SCSI ID 1, Zip ID 5)

I believe you have a problem with the TERMPWR (termination power), which
isn't supplied by the Zip (which is normal).
The last unit on the SCSI-chain has to supply TERMPWR to get power to the
Link and that's probably why it fails when you have the Zip connected. I
believe it would work if you connect the Zip closest to the interface and
the harddisk as the last unit on the chain, with a termination plug
connected.
Otherwise you should get it working if you make a cable that takes the +5V
from a port on the computer and supplies it to the TERMPWR pin in the Zip's
second SCSI-connector. Naturally, the Zip must be terminated in the normal
way with the switch on the back too.

Good luck and best regards,
Claes

I think Termpower can be supplied by any device, however some SCSI cable
(ie crap ones) may not carry the power so having termpower supplied by
the last device is a good idea but not necessary.

Any Drive can supply the scsi-bus with TermPwr. A ZIP as a single scsi
device can't work. ZIP Devices self doesn't supply the bus with TermPwr.

That's the point of some missmatches.

>Link and that's probably why it fails when you have the Zip connected. I
>believe it would work if you connect the Zip closest to the interface and
>the harddisk as the last unit on the chain, with a termination plug

Well, that's equal. On all machines here, Falcon,ST (LINK '96, Macintosh my ZIP
is allways the latest device, i like to chance my ZIP from one to any
other machine. (Termination ON) (Without ZIP, the latest device have
to switch Termination on)

>Otherwise you should get it working if you make a cable that takes the +5V
>from a port on the computer and supplies it to the TERMPWR pin in the Zip's
>second SCSI-connector. Naturally, the Zip must be terminated in the normal

Yeah, and burn down the wire!?

The one an only way to connect TermPwr to a bus is
to use the following diagram:

(Also you can fit your ZIP / Hostadaptor with that smal modifcation)

Diode Fuse 1A max.!
+5 VDC o-------->|---#####--------o SCSI TermPwr

It's easy an sure to use. Otherways you support you computer backwards
with +5 if the computer is off and the ZIP Device is ON

I don't no, it's a tip only..

Regards, Robert

Hey Greg,

IMHO it's well worth the price.

difference between 2.5 and 3.5

* The source and destination windows are independant of each
other sizeable.
* 3-D dialogs if one have at least 16 colors
* one can define paths that one use very often
* Drag and drop
* one can define more macro jobs (up to 20)
* it's possible to give the partitions/drives a name instead
of using a,b,c etc.
* two new modes for source treatements (copy parameters)
-Date not selectable. After copy the copyied files aren't
selectable and are displayed in a pale color
-Date un-selected. After copy the copyied files are
un-selected which make then selectable again.
* Date buffer only in ST-RAM mode
Interesting for TT-users. To avoid corrupted files during
copying if one have a third party TT-RAM card
* Modification of the parameters are automatically saved after
quiting Kobold. But this can be switched off (new in v3.5)
* Long filenames (v3.5) are supported now. One can define the
lenght of filenames that are visible in both windows.
* New more powerfull search options for data selection.
* Can copy symbolic links
* One can define any character one want to use as foldersymbol
* If available the external fontselector will be used for font
selection.
* One can format floppy's under MagiC Mac

There are probably a few other modifications but these are the most
important.

Hope this help

That's exactly what I've done and that's why it is so mysterious for
me. Despite the /dev/null/ setting Connex redirect the output to the
screen. It isn't the usual stuff but only an endlessly line of strange
characters, like the characters I get when I log in with a common COM
prg. The common lines are directed to the logfiles.

Did that but still the same problem and what's more with this setting
I only get now a 19.200 connection instead of my usual 28.800
>
>Maybe you can e-mail the author on the subject?

Did that before I posted my problem to c.s.a.st. but he seems not to
care to answer:-(

>Do you mean the serial.cpx from Peter R.? I can't use it on my setup, the
>port is already in use??? No problems with the fserial.cpx, though.

Yes, it is the serial.cpx from Peter R. indeed. I changed it to the
old modem.cpx but still have problems with Connect. As soon as I type
a character in the editor this character is repeated endlessly.
Furthermore if I give a dial command my modem seems to react but
direct afterwards I get a "time out"
Rufus however works great.

I just did some benchmarks with CAB 1.5 and the 030/FPU version ('FPU'
isn't mentioned in the readme). The '030 version was about 4% faster. I
had to prove it to myself to know I was wrong, especially since I said the
difference was quite dramatic <g>. But I had been running the normal
version of CAB 1.5 for a week before I tried the '030 version, and it
truly did 'seem' faster. Without a stopwatch, I can't tell the difference
between the two <g>.

> (It did offer the option of formatting double sided)

I had a 720K drive with exactly this problem. The root directory and
FAT are on the same side but the filedata alternates to keep the head
movement down and thus speed up the transfer rate. Small files might
all be one one side. Larger ones won't be though and this is why you
get the errors.

>2. If it is a 720 drive acting up, does a fix spring to mind, short of
> replacing the drive?

Unless it works ok when formatted by the atari (misaligned heads) then
you'll need a replacement, and it sounds like you do as it doesn't.

>3. If it is a 360 drive, how do I format a single sided 3.5" diskette on a PC?

dos 3.3 should be old enough to format a 360K disk. I can't remember
the options after all these years though. ;-(

Even so, a modern PC just might not be capable of 360K any more. I
dunno.

If you are competent with a sector editor on a PC you could format a
360K on the atari then hack in the right values to the boot sector.
Even if the PC can't deal with 360K any more you could format a 720
then mark all the sectors on the broken side as bad. Would be a lot of
trouble though!

Correct, the current OVL interface only handles a single connection.
Alex and I have discussed the possibility of designing a new OVL interface
that allows multithreading, and thus multiple connections. I haven't heard
much new from Alex on this topic though, and I decided that kludging it
up on my own with pipes in the OVL would be hard enough and ugly enough to
be not worth the effort.

959. Help! STE Serial Port upgrade!

Newsgroup: comp.sys.atari.st
Date: 1998-01-17 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <885041080.23099.0.nnrp-04.c1ed1184@news.demon.co.uk>
Source record: 109770

I have a tiny problem which is being a pain in my but.

I have installed the serial fix to my STE and I'm using a US Robotics Sportster 28800 modem.

Everything has been double checked, wiring wise.

When I use StinG using the upgrade; it logs onto the net with no problems, and STinG informs me that I'm connected at 28800. The problem is when it comes to using Newsie, CAB etc... They seem to wait for ages and then timeout!

I have tried connecting to a BBS to download some files to test this out. I log onto them with no problem at all, and I'm connected at the 28800 speed. When I download files, I keep getting CRC errors and then file position errors and finally timeout and aborted.

If I switch out the upgrade everything is as normal at the 19200 rate.

How do I get round this problem, because it's got me buggered.

Cheers! for now
Steve

If it doesn't you need to arrange that one of the devices supplies
TERMPWR to the bus as this is what Link2 uses for power.

Can anyone tell me what programs I can use on both the ST and Falcon to grab game screens for use in advertising? I know I have a couple programs lying around here(can't recall the names off hand) but have used them in the past with mixed results. Perhaps there is a newer program around that will give good results?

I might also need the name of a format conversion program so that I can get results in .JPG or .GIF to use with HTML. Will Speed of Light do so?

Thanks in advance for any help!

I quite agree, Eric. And as an added bonus to not _having_ to run MagiC, you get to use all the programs that were designed to work with STiK too!

I tried (successfully) to use IConnect, and decided it just wasn't for me. I went to Peter's web page, got all the latest STinG files, and was up and running in under an hour with my regular Geneva/NeoDesk setup...

I'm now a very happy camper.

Take care,

979. Serial Mice

Newsgroup: comp.sys.atari.st
Date: 1998-01-17 00:00:00 UTC
From: shammond@loop.com
Message-ID: <69r0mr$4cq$1@usenet88.supernews.com>
Source record: 109790

A couple of things to keep in mind when using a serial mouse with an ST/TT
and I presume a Falcon also.

1) A dead mouse may not be a dead mouse - the pins in the Atari mouse
port can lose contact with the keyboard circuit board. If mouse
operation is intermittent or nonexistent but can be restored by
wiggling or pushing on the plug - the most likely cause is bad solder joints
where the mouse port pins enter the circuit board. An application of a small
amount of new solder with a pen type iron will restore mouse operation to like new.

2) If you really want to use a PC mouse and a serial mouse driver - the
serial mouse driver must physically load before any other program
that modifies that serial port, ie HS_Modem or FastSerial.

3) I have tried a couple of different PC mice and the "Kensington
Mouse-a-box" that I have for my PC labtop works well on my TT. A 3 botton
Logitec will not work even though the SERIAL25 program has a special "Logitech" mode.

4) Touch and feel for the serial mice are not as good as I have for my
Alfa Data mouse using the Atari port on my TT.

5) If you use a boot program such as X-Boot keep in mind that you will
not have mouse control until the serial driver loads - just like a PC
:).

Yes, mine has a red LED which lights up when connected to the MiniS.
Did the original Link have this LED..?

I'll just check that it still lights up when I connect the Zip Plus...

Yep, when the Zip is conected, the LED on the link still lights up
when the MiniS is powered up. But the software still doesn't register
that the Link is connected :(

Hi Greg,

As you're not on the UK distribution databse you must obtain yours
from a local distributor. This is something you will have to take up
with them I'm afraid.

All supplies of issue 7 that have been ordered *and* paid for by
distributors have been sent to them.

There is certainly at least one case of a distributor who has not so
far paid us for the issue 7's that they ordered.

> this intended show slot in?

There's an earlier thread here regarding the UK shows in which I mentioned that Mike Goodman had just told me that *officially* he was no longer able to organise any more shows due to other work commitments.

Doing the shows costs a lot of time as well as money, and Mike is so busy with other things he just can't take on the extra workload. There's no long story or anything, Mike called me last Sunday for a chat about the shows, and then on Wednesday night he called to say that after a long hard think he realised he just didn't have the time necessary to devote to the shows.

Please do respond to my questions by email, everyone's thoughts do count! :-)

Best regards
Mike Kerslake

Of course, CHKDSK3 only defragments your free space; it doesn't defrag your files (i.e. put them in contiguous order).

You are a moron, Barry. Uwe is one of the most respected programmers for the Atari platform (ever hear of HDDRIVER?), and knows of what he speaks. I suggest you be a little more civil, even if you disagree. Uwe wasn't being hostile, so why did you feel the need to respond with hostility?

Has System Solutions tackled this upgrade yet? That's where we get our converted stuff over here in the U.S., and I'd *love* to have 3.5, especially with the long filename support. I stopped using 2.5, for the most part, because of the lack of long filename support.

For GEM applications you can use "That's Snap!" which can grap sections
of the screen and saves it as an IMG file. You'll then need a converter
(eg: Imagecopy 4, GEM-view) to convert it.

Steve, you are using (silly question but...) HSModem v7, right? If not,
get it, if you are-it sounds like you need to adjust the buffer settings
in it. Try going up, and try going down to get rid of the CRC errors.

Good luck! :)

LIke Greg, I too have not received issue 7.

What is interesting is that I paid in advance to the address listed in
the AC release for US distribution. Don't know if that has anything
to do with whoever you are referring to. But, if so, listing them as
the official US contact point would seem to mean that AC magazine
does have some obligation, morally if not legally.

Just my thoughts.

I'm getting ready to go check out alta vista and deja news, but
perhaps someone wouldn't mind answering this question again -
I just went out and bought a 33.6 modem. But SERIAL.CPX won't let me
select a speed higher than 19.2 - what do I need to reconfigure to
allow me to use 28.8 or 33.6? HSMODEM? anything in my DIAL.SCR or
DEFAULT.CFG? I've tried changing HSMODEM, but it's telling me that
it's an invalid baud rate (I've tried 38400 and 57600).

Thanks,

Terry

Roger is/was working on a CD ROM burner package. He was hoping
he could sell it in the $100-150 range. It's been a while since
I last talked to him about this so you might try emailing him.

By the way, Floppyshop may have acquierd the rights to the M&E
modules, at least, as their Positive Image 2 upgrade (based on
a December press release) would include them. PI 2 will be out
between now and April, 1998.

Does anyone have Herve's email address -- the owner of Parx. Perhaps
he has or is interested in selling the rights to his products.

Greg

News and Mail can be downloaded (with POPwatch and NEWSwatch) and read
off-line with Okami, but I believe this cannot be done compressed. I know
this is possible with some other platforms, and I agree it would be nice
with STinG too.

Alex, does this mean the early versions (up to V1.5) used the FPU
significantly (which then would explain neatly the "dramatic" speedup
of the special version) ?

> Have I missed the point here or what?!

The only point you've missed is that the original manuals by Atari were
pretty buggy. The connector drawings were useless, since almost half of
all pins were named faulty.

Both Modem 1 and Modem 2 have the full set of handshake signals. The
Serial 2 port lacks RI. The TT's Serial 1 lacks most handshake lines,
however.

Cheers Peter

==========
A couple of things here.

(This is my experience with my system: Falcon TOS 4.04, Afterburner040
with TK 4.09 & 5.07b, Nemesis at 20Mhz bus - 40Mhz cpu, 14meg STram,
32meg TTram, Toshiba 1gig IDE, Micropolis #4345AV 4.5gig SCSI-3)

2 Color Desktop, at 960x720 with Videlity using the SBII external dot
clock.

Either using Geneva/NeoDesk & Geneva/MiNT/Neodesk

==========
re NeoDesk: if you set in the Miscellaneous settings "Number Display" as
123_456 then the numbers should report correctly in the "Quick Disk Info".
For a partition >512meg but <1024meg; e.g. 16384 bytes/sector & (fill in
your number, in my case 4294934528 for a 1024meg partition) bytes/cluster.
If you set the numbers to display as 1.23K then it may read 16K
bytes/sector & -32K bytes/cluster.

I have:

HDDriver 7.04 (run from the Auto Folder)

AHDI 6.06u (my default bootup)

Also note that HDDriver refers to 1024megs as 1000megs (there are two
different methods of calculating the size) if I'm wrong than someone
please correct me.

HD tests done with: Diamond Edge, Optimize 2.6, Zorg 2.08, Correct.
File tests: Tree_Chk, Eagle
Copy Files: NeoDesk, KoBold ver 2.5

Toshiba MK1002MAV (2.5")
IDE partitions: 13.64meg,314.75meg,314.75meg,440.65meg (partitioned with HDDriver Utilities ver 7.04).

Micop 4345NV (SCSI-3)
SCSI partitions: 30.69meg,512meg,937meg,1024meg,1024meg,1024meg (partitioned with ICD Pro 6.5.5 as AHDI compatiable see explaination further down as HDDriver had problems).

==========
re Diamond Edge & my partitions (SCSI) >512, <1024megs:

Diamond Edge's source code has been bought so there may be an update. (why would someone buy it?)

Diamond Edge's problem is in the "All Info" window where the "Grand Totals" shown are incorrect. If you go to the indivual drive info its correct.

Also its unable to partition some of the new SCSI drives (like mine). I get a error message saying "cannot read physical sector 0".

Geneva/NeoDesk & DE:
==========
It has no problems with my partitions set at 1024megs while using the version 5.07b - AB040 driver, caches on or off, if I use ver 4.09 of the AB040 driver the Data Cache needs to be turned off.

Geneva/MiNT/NeoDesk & DE:
==========
Works correctly with AB040 driver ver 5.07b. Diamond Edge has no problems with my partitions at 1024megs.

Will not work correctly with TK4.09.

re CAF (2.06):
==========
No screen enhancers. (use a 17inch monitor)
AB040 driver ver 4.09 always used.
Plain TOS desktop, CPX panel, Reserve ACC, WaveMaster as ACC. NVDI must be run in STram, all program flags must be off e.g. TTram.

The *.WIF file for a 4 min stereo *.AIF file takes about 2 min to draw.

Works fine with my 1024 meg partitions using AHDI 6.06u.
In fact worked fine even before I had the AB040 & Nemesis with either ICD 6.5.5 or AHDI 6.06u.

Generally I have 4-6 tks audio before being dumped to ADAT and 16-42 channels of midi via the SMPII.

I don't use HDDriver for hard disk recording. Sometimes it has or had conflicts with CAF's built-in SCSI routines.

==========

Now the problem with HDDriver 7.04:

Version 6.00 had problems with the AB040 and it took awhile to get ver 7.04 in North America so I've been using AHDI 6.06u and with the drives partitioned with ICD Pro 6.5.5 (AHDI compatible).

After getting ver 7.04 I repartitioned the Microp 4345NV as 5 equal partitions. After writting data to some of the partitions DE, Optimize, Zorg, Correct all reported errors on the second & third partitions.

HDDriver sectors: 2-1778006; 1778007-3556011; 3556012-5334016; 5334018-7112021; 7112023-8890027.

I ran ICD's partitioning software and when it read the existing partitioning scheme it reported that it had to adjust the second & third group of sectors to: 1778008-3556011; 3556013-5334016.

I repartitioned again with ICD Pro 6.5.5 and use AHDI 6.06u to boot and run HDDriver 7.04 from the Auto folder. No problems.

Now this is what was reported.

Manufacturers spec for the drives:
Toshiba MK1002 - 1080meg, 512 bytes/sector (standard)
Micop 4345(A)NV - 4550 meg 512 bytes/sector (standard)

HDDriver reports:
Toshiba MK1002 - 1033.6meg, 2116800 sectors (512 x 2116800= 1083.8meg)??
Micop 4345(A)NV - 4340.8meg, 8890029 sectors (512 x 8890029= 4551.7meg)??

ICD reports:
Toshiba MK1002 - 1083meg, 2116799 sectors available 1 excess
Micop 4345(A)NV - 4551meg 8890028 sectors available 1 excess

Funny though, I repartitioned the IDE and no problems.

Don't know if this can be applied to all systems.

I hope this information is useful.

1006. USA: UPDATED you-ship-it free or nearly free Atari hardware/software

Newsgroup: comp.sys.atari.st
Date: 1998-01-17 00:00:00 UTC
From: Ben Allfree & Leslie Vandeman <benles@powernet.net>
Message-ID: <34C1816F.5DDD50F8@powernet.net>
Source record: 109817

```
Free or nearly free Atari hardware/software
-----------------------

I don't know if it's clear from what follows, but you can get a
complete Falcon030 system (monitor, CD-ROM, computer) as a trade for
Gemulator 98/MagicPC and MagicMac 5!

----- Contents -----

1) Free monitor
2) Falcon030 for trade
3) Free 1x CD-ROM
4) Shipping details

====== 1 ======

FREE SC1224 12" RGB monitor to the first person who wants to ship it to
him- or herself. Works fine, but the case is slightly melted from one
hot day in the car long ago :)

====== 2 ======

I will trade my Falcon030 14/80 for the latest version of MagicPC and
the English version of MagicMac 5 (which works on System 8). Gemulator
98 with TT ROMs may be substituted for MagicPC. Instruction manuals are
a must, warranty cards are desired.

I will ship the original 4 MB SIMM that comes with the Falcon. I've
removed the internal speaker, but I can re-connect it at your request.

The SCSI CD-ROM mentioned next will be included if it is not gone by
the time you decide you want a great computer.

I'm open to other trading ideas; the bottom line is that I don't have
room to keep the Falcon.

Commercial software included:
* Diamond Edge
* HD-Driver 4.x
* Latest versions of Geneva and NeoDesk, and compatible MiNT
* AtariWorks (with cool time log, billing, and checkbook databases I
made)
* NVDI (latest, I think)
* MultiTOS
* SpeedoGDOS
* Rainbow (art package)
* ExtenDOS
* "Language" disk (note: "System Audio Manager" (SAM) is NOT on here,
```

my Falcon got shipped without it.)

Shareware/Freeware/PD software, unregistered:
* Everest (latest version)
* Address
* MpegDSP
* CPU MOD
* Paula
* Multi-Saver (registered, I made it!)
* CoNnect
* JPEG DSP viewer
* Speed of Light
* Shower (picture shower)
* Look'n'See
* CAB
* If I can find it, the "All Things Falcon" CD
* STiK
* STiNG

Special notes:
Two of the little rubber plungers on my keyboard wore out, so I had to move them to keys I don't use very often (keys duplicated on the number pad). All the keys work provided you have working little rubber plungers. I haven't been able to find any.

You might know, but the 14 MB RAM is actually a 16 MB SIMM. 70ns, I think.

The original internal metal casing has been removed because the 14 MB upgrade won't fit with the casing on. The metal casing will be shipped too.

====== 3 ======

If anyone wants it, they can ship themselves the single-speed, external, SCSI NEC CD-ROM drive, which comes with the SCSI to SCSI-2 cable, otherwise, it will ship with the Falcon.

===== 4 =====

Shipping details:

Shipping from me to you can be calculated using http://postcalc.usps.gov/. Choose to ship "a package".

My zip code is 89507. Make sure to use that in the "From" area. Choose whatever type of shipping you'd like.

Rough estimates for weights are:

Monitor weighs ~25 lbs, including box.
CD-ROM weighs ~3 lbs, including box.
Falcon weighs ~15 lbs, including box.

To pay shipping, once we agree on the shipping method, simply send a check to me for the amount made out to the "Postmaster." I can't cash it, but I'll use it at the post office to pay shipping charges. You can write a memo like, "good only for shipment to the xxxxx zip code", if you're nervous that I will use the check for my person shipping needs.

If the shipping charges are a little more or less, we'll call it even. If something was drastically under- or over-calculated, we'll talk some more.

For the Falcon trade, we will exchange phone numbers so we can call to verify the legitimacy of each other. I expect that each of us will pay to have the desired items shipped to us.

Answered in the Quick FAQ. A PC serial mouse can be used, but you need an
AUTO folder driver that can be found on most FTP sites.

Don't know where you are from, so I can't recommend an Atari dealer, but
there are still a few of them going who sell Atari mice.

I am using 57600 bps mode because 115200 is virtully unusable even if
mouse is not connected:(I have K56Flex modem and it definitely
suffers lack of speed on lower DTE speeds.

Is there any way to fix this? Hardware ...? HS-modem setup ...?
Anything ...?

Borland C++ was dropped by Borland, and sold as Pure C, which is now a
Gribnif (NeoDesk/Geneva) product. Should still be commercially
available. At least this is how I recall the product history.

The good news for readers that subscribe through Rich Tietjens is that his order and payment for issue 7 arrived Saturday. This means his supply will be despatched to him this Monday (19th). Once he gets them he has to envelope them, address them and post them. But at least they are on their way!

> to do with whoever you are referring to. But, if so, listing them as
> the official US contact point would seem to mean that AC magazine
> does have some obligation, morally if not legally.

I really do appreciate your view here. We are just as annoyed at the late delivery of issue 7 to Canada and USA as you are. However, like other magazine publishers who make their magazines available outside the home country, it makes sense to do a deal with someone living in the country where we want the mags to be distributed. We were approached by Computer Direct in Canada who wanted to buy a supply of mags off us and we agreed to let him distribute the mag for us. Computer Direct also supplied the USA distributor for economic reasons (less carriage costs), but because Computer Direct have so far failed to provide an order and payment despite repeated requests, Rich Tietjens in the USA is now getting his supply direct from us.

We understand that Computer Direct are telling their customers that we haven't sent them their supply. This is very misleading. Computer Direct are well aware that they have to order and pay for a supply before we can send them. They simply have not ordered a supply of #7 from us so far. Their magazines are sat here in the office alongside me just waiting to go, but until Computer Direct tell me how many they want and pay for them, there is very little we can do. We can't send magazines to distributors before payment is received any more because we were badly burnt by a previous distributor who owes us a considerable amount of money. The only good thing was that he did at least refund his subscribers!

I suggest that anyone that has paid Computer Direct for copies of AC to contact them now and politely ask them for an explanation. We want these magazines put aside for Computer Direct to be on their way soon. They've been ready to go since November!

So, in summary, USA readers should be getting #7 within a few weeks, customers of CD in Canada will have to rely upon them placing an order with us, but you can help by making them aware of your concerns.

We are very concerned about this situation, but there is very little we can do. We have asked CD to place an order with us, but so far they haven't, that is the situation in a nutshell!

Best regards
Mike Kerslake

Funny you should say this, Terry :-) I have been mystified by
something similar (but not the same) which happened to me.

In my case the file I had set as Newsie's browser homepage was
overwritten by Newsie's LOG file!! Blimey!

This occurred just after I had a warning message that my Outbox was
nearly full - can't be sure that this was anything to do with it,
though.

So ... there are 2 questions here.

1. Why did Newsie tell me about the Outbox when I have 'unlimited'
mail boxes delected.

2. Why the over-write?

John???

>it's an invalid baud rate (I've tried 38400 and 57600).

What TT port are you on, Terry? I had some probs. when setting up and have gone to Serial 2 where all usual DTE speeds are available (I'm using 115k2 DTE into a modem connecting at 28k8 DCE).

BTW - don't confuse these DTE/DCE rates. 28k8 and 33k6 ARE invalid port rates, if you look in your modem manual you will see that it will accept rates like 19k2, 38k4, 76k8 and 115k2.

If you are sending/receiving uncompressed data and want the modem to do the compression you will need to set DTE (TT-port speed) to about 3 times the DCE (modem-modem speed).

Could anybody tell me how to turn the chimes off on the corner clock that comes with magic.

I know I can turn the volume down on my monitor, but then I cant get any sound at all.

Thanx,

Keith.

This is what he told me as I've been in contact with him recently on
getting Extendos working with my CD-ROM. Don't don't if he's still doing
it or not?

Does anyone have or know where I can get an atari dx7 editor? I've just acquired a tx7 which needs an editor to access the synth. I've already got a librarian.

Cheers

Phil Matthews

1028. Woller & Link

Newsgroup: comp.sys.atari.st
Date: 1998-01-18 00:00:00 UTC
From: Jo Even Skarstein <josk@stud.ntnu.no>
Message-ID: <69tdal$hn0$1@due.unit.no>
Source record: 109703

Some of you might remember that I posted my bad experiences with Woller & Link in this newsgroup a couple of months ago. Shortly afterwards I got a mail from Konstantin Woller (he wasn't particularly happy...), where he assured me that he would do his best to sort things out. Hah!

For those of you who doesn't remember is, here's the story:

In July 1997 I ordered a MultiBoard from Woller & Link. They didn't accept credit-cards, so I sent them a cheque (DEM219). A few weeks passed, and I didn't receive anything from them. I sent them some mails, and they assured me that the Multiboard was on it's way.

A few weeks later I sent them another mail, and another, and another... No replies, no Multiboard. Three months after I ordered the Multiboard I was quited pissed off, and I posted a message in this newsgroup where I told about my bad experiences.

A few days later I got a mail from Konstantin Woller, where he told me that he wasn't very happy very happy with the posting (understandable), that I had lied (he claims he had answered all the mails I've sent him.), that the Multiboard was lost in the mail and that I should wait a bit more. So I did.

A few weeks passed, and I sent a mail to Woller & Link. No reply. Since then I've sent several mails to both Woller & Link and Konstantin Woller personally, but with no response. I've sent them several proposals on how to solve this matter, but it looks like they just don't care.

Since other people reports that Woller & Link is alive, and that the e-mail adresses I've used is correct, I can only assume that W & L hopes that I'll just give up someday. Dream on.

I strongly recommend *not* to send Woller & Link any money, if possible then pay with credit card or order your stuff COD. Don't send them anything in advance!

It would be nice if anybody could send them a copy of this posting, as I don't think they read this group. I'm obviously in their killfile so it's not much point in posting it myself...

My Link is a "2". All the docs and drivers that came with it refer to it
as a "2". But though it has an LED, there is absolutely nothing on the
physical unit that says "2".

>in a newsgroup.
>

Better than SPAM.

I don't mind at all. I don't care what the language is, as long as they are Atari Users looking for help. There always seems to be someone knowledgeable in both Atari Computers and Languages, so all the more power to those Multi Lingual people that can help others.

I sometimes load a post in Rough Trade to see what they were saying. Variety is the spice of life and in one dimensial North America, the feeling is English is the only language, which I hold in the same regard as a PC is the only Real computer.

Signed, Uni lingual Atari User.

I truly wonder if he has underestimated anything? Perhaps he is dead right no matter how powerful you consider the 68000 series. I have seen my nephews P75 choke and die on java. I know of few users who really like or use it. Most often Java is turned off. Turned off in the form of YOU TURN ME OFF.

I find you post immature and offensive. I have never once posted or spoken to or about UWE but I read his post constantly and respect his opinion. I fully expect an apology. I AM OFFENDED and I am certain others are as well.

>The Atari TT runs at 89% of the power of a P75 and these can run JAVA

>

You don't have to sell anyone here, we use Ataris , TOS based computers or emulators running in very powerful PENTIUM computers.

>Now tell me, what kind of computer system do you have???
>

Irrellevant, he has a brain!
Brilliant you are, tick off an Atari Guru and supporter. Maybe you could go after all software authors so that there be no atari development.

>(hope not to-) Read 'ya (-again)

Hope you grow up.

>Atari Shareware registreren ? via CSRP natuurlijk!
Perhaps I have missed something here?

Think before you write. Throw your religious zealot passion for the 68000 away and relax. In other words, profanity does not advance discussion, and be very thankful that anyone is at all concerned with the atari platform.

For all readers I apologise on his behalf.

Source record: 109711

Hello everyone,

I'm trying to install Okami v0.28 but it seems that I can't do this without your much appreciated help.

First of all I can't see any dial prg so I suppose Okami make use of an external dial prg. Does it make use of MiNT/mintnet or what?

Secondly if I start Okami it complaints that it "cannot load onews.def". In the package I've there isn't such a file so I suppose I must create one myself but how?

Thirdly, what the hell is Hermes?

There will be other questions but for now this will do.

TIA
Martin

I've had different, but similar problems with NEWSie. I have a group file called BINARIES.GRP that kept getting deleted until I moved it out of NEWSie's main directory. And v0.84 kept deleting NEWSIE.PRG until I made it a read-only file. They weren't getting overwritten, but just deleted.

Hi Roger,

Modem 2. Whoever installed the Nova card in this TT removed the
cables for the serial ports, and I haven't gotten around to replacing
them.
>
>BTW - don't confuse these DTE/DCE rates. 28k8 and 33k6 ARE invalid
>port rates, if you look in your modem manual you will see that it will
>accept rates like 19k2, 38k4, 76k8 and 115k2.
<nod> I was trying to get the 38k4 originally. I will be changing
that in the future. Actually, at the moment, I have everything
working at 38k4, using FSMODEM - but I still want to work out the
HSMODEM, just on general principles.

>If you are sending/receiving uncompressed data and want the modem to
>do the compression you will need to set DTE (TT-port speed) to about 3
>times the DCE (modem-modem speed).

I'm looking into this. The modem gives 115k2 & 230k4.

Thanks for your help.

I've found that the STING.INF file in the /auto/ folder has also been
overwritten. This could be more than a minor annoyance, if I have no
idea what files have been corrupted, until I need them and find they
aren't there.

If you can pay with credit card or COD, then order by all means :-) Just
don't send them money in advance...

>Some of you might remember that I posted my bad experiences with
>Woller & Link in this newsgroup a couple of months ago. Shortly

Yes i remember this.. and you may recall that i posted a follow up
about my bad experience with them. Shorthly after that posting i faxed
W+L about my order - sadly until now no reply from them and no item
from them - the Payment was made by Eurocheque in Neuss and duly
cashed by them a few days later. :((

I feel as though i have been conned and robbed - not a very nice
experience in an already small Atari community.

W+L if you are reading this - please stop making excuses about the
mail service - the British PO have not received anything (they have
investigated) - and either send me what i ordered or send me my money
back.

about how both of them have had file corruption problems from
using Newsie 0.84

I too have had disk corruption, file over-writes, etc. that so far I
have managed to catch with Diamond Edge.

But it continues to be a concern. I find that if I disconnect my PPP
connection (Sting 1.12) BEFORE quitting Newsie, I have problems -
especially if I try to quit Newsie after hanging up (the program
hangs, and unless I perform a hard reboot, I get random file
corruption, on various partitions).

On the other hand, when I remember to do things in the proper
sequence, Newsie is quite pleasant to use. I was using Popwatch to
send my (written offline) emails, but that has started acting funny
(trying to send too many bits for a message, and then hanging).

Trying not to fall off the tightrope...

Due to lack of space I have the following equipment for sale in the UK:

1* >FALCON030 32BIT/32Mhz UPGRADE TOS4.01 4mb RAM 60mb HD 1.44mb FDD
, DSP needs adjusting due to upgrade. Ideal for WP/DTP/GRAPHICS
(inc software: xboot, Pagestream2.2UK DTP plus loads more)<
>plus VGA Monitor for use with Falcon inc adapter<
250 pounds ono

2* >DEKA2 Detachable Keyboard Extender (allows connection of virtually
any 'PC' type keyboard to the Falcon or ST, via adapter)<
50 pounds ono

4* >VIDI-ST 12bit all-in-one Video Grabber (allows grabs of still
/Full motion video on Falcon in True Colour)<
50 pounds ono

5* >Falcon Truepaint (boxed with manuals)< 20 pounds ono

For ALL items 1-5 I ask 300 pounds ono.

Please email Dave at stu95djn@rdg.ac.uk to make an enquiry/offer for any
of the above. First come first served.

Hi all,

I'm a new Magic (5.13) user for about 10 days.

When doing internet stuff I often have hard disc problems like clusters
not in a file or clusters shared by 2 files and so on (says the
excellent Zorg).

Can the Sting time slice (internal.cpx) have something to do with this ?
It is set to 10 at the moment as it used to work well in single Tos (4.04).
The modem2 speed is at a sensible rate of 56700 bps.

I just went out and bought a 33.6 modem. But SERIAL.CPX won't let
me....

If you are using Modem 1 then all you can get is 19200. See if you can change Modem 2 to 38400 or Ser.2/LAN to 57600 or 115200 with the SERIAL.CPX. If you can't change either of these it means that something is not configured correctly with HSModem or incorrect modules are loaded. FastSerial v096 also works fine - it is a lot easier to set up but will not give you 230400 bps on Ser.2/LAN. E mail me if you have further questions.

This sounds similar to my problem with a standard Zip. The drive can
be formated, partitioned, but only works for a short time. After
a while the drive quits working and I get an error saying the output
device is not capable of receiving data. Link 2, TOS 2.06, HDDriver 6,
and no ACC's, no auto prgs. Tried different termination schemes with
no success. Any help, thanks.

Douglas,

I have no idea about number of users. If you want to get a reasonable idea about shareware registration, contact Joe Connor at Atari Interactive of Danny Bhabuta at Cyberstrider. I've registered maybe a dozen shareware programs which did what I wanted them to do. If you make your program feature enabled but save or print disabled it will give people who like/need the program a reason to register. In that case, if they don't, they don't care enough about it to do so. Also, find some way of making it easy to register. Overseas registration, in particular, can be tough. I have sent cash in the mail for registration, but there's always a risk of loss there. On the other hand, obviuosly you're not going to take credit cards. Since you're in the US, I would find someone like Systems for Tomorrow or the Computer Dungeon to handle registration here. Contact Joe or Danny for the UK and they might also help you make contact with someone in Germany. Find a bank that will take foreign checks without killing you with fees for people who'll need to pay in lire, yen, Guilders, etc.

Finally, write the program for the love of it first. You won't make a million dollars so you might as well like what you're doing.

HELP! Okay here's the problem........

I didn't use my 1040 for about a month or so and then when I tried to turn it on, it wouldn't come on. I didn't move it prior to this happening; I didn't drop it; I didn't so much as sneeze on it. It just won't come on. I flip the switch and nothing! And I'm not the only person that I know who has this problem with their 1040 - I know 2 other people who've had the same thing happen.

So. Does anyone have a fix for this? I think it might be the power supply - I checked the fuses but they all look good. Anyone know where I can buy a powersupply in the Toronto, Ontario, Canada area?

I'm sorry to hear that.

> What is interesting is that I paid in advance to the address listed in
> the AC release for US distribution. Don't know if that has anything

The addresses listed by AC for local distributors are for the
convenience of local readers. We have a deal with them to supply them
with the magazine. Because of the small size of our organisation, the
deal includes that all copies must be paid for in advance by the local
distributor.

> to do with whoever you are referring to. But, if so, listing them as
> the official US contact point would seem to mean that AC magazine
> does have some obligation, morally if not legally.

We deliver the magazines to the local distributor, but your contract
is with them. If you have paid them in advance and they have not
supplied you with your order you must take the matter up with them.
All distributors who have paid us for their magazines have been
supplied. While I have great sympathy for your position we cannot send
you direct magazines that you have paid somebody else for.

However if you or anybody else wishes to order magazines direct from
the UK, the following are the prices and address etc.

NB: Unfortunately we DO NOT accept credit cards.

Hello,

A few weeks ago people were loking for smileys ...
Look at what I have found on the "Suzy B's Atari Software treasury #2"
CDROM which I have bought at December Atari Paris Show ..

Have fun with that !

SMILEYS!!
164 of them!

#-) submitter partied all night

#:-) :-) done by someone with sort of matted hair

#:-o "Oh, nooooooo!" (a la Mr. Bill)

%-) person submitting has been staring at the terminal for 36 hours;
submitter is cross-eyed;
submitter with long bangs

%-^ submitter is Picasso

%*} submitter is very drunk

'-) Submitter only has a left eye, which is closed

':-) submitter accidentally shaved off one of his eyebrows this morning

(-) submitter needing a haircut

(-: submitter is Don Ellis from Tektronix;
submitter is left-handed

(-E: submitter wears bifocals

(:)-) submitter likes to scuba dive

(:-(unsmiley frowning

(:-) smiley big-face

(:I egghead

)8-) scuba smiley big-face

):-(unsmiley big-face

):-) smiley big-face

*-(Cyclops got poked in the eye

*:o) submitter is a Bozo

*<|:-) submitter is Santa Claus (Ho Ho Ho)

+-(:-) Submitter is the pope

+:-) smiley priest

+<:-) "Peace be upon you, my children..."

,-} wry and winking

-:-) submitter sports a mohawk and admires Mr. T

->=:-)X Zippy the Pinhead

-) Submitter has one eye

-(Always should wear safety classes.

-(Especially in the laser burn-in room.

-] one-eyed smilely

0-) smiley cyclops (scuba diver?);
submitter is an arc-welder;
submitter wearing scuba mask

0:-) angel

3:o[net.pets

8 :-I net.unix-wizards

8] submitter is ponochio

8-) smiley swimmer;
submitter wears glasses
wide-eyed look

8:-) glasses on forehead;
submitter is a little girl

8:] normal smiling face except that submitter is a gorilla

8*) smile with glasses and a moustache

8^ submitter is a chicken

:%)% submitter has acne

:*) drunk smiling face, for those of us who like get intoxicated
before or while reading netnews;
smile with moustache

:- prolog programmer

:-! smiley bland face

:-# Respondent's lips are sealed;
braces

:-#| smiley face with bushy mustache

:-$ smiley face with it's mouth wired shut

:-% Respondent has beard. smiley banker

:-& smiley which is tongue-tied

:-'| submitter has a cold

:-(Submitter has read too many 'smiley' articles.;
boo hoo;
un-smiley;
sad face, 'that comment makes me sad [mad]'

:-(*) submitter is getting sick of most recent netnews articles and is
about to vomit

:-) ha ha;
the normal smiling face, appended to a sentence or an article
means 'this is a joke' or 'this is supposed to make you laugh'

:-)' submitter tends to drool

:-)-{8 submitter is a big girl

:-)8 submitter is well dressed

>away and relax.

FWIW: The architecture of the 68000 family is so
much more efficient than the 80x86 that it's
understandable why it commands such exceptional
devotion.

This efficiency is due to the fact that Motorola
defined a minicomputer on a chip before ever producing
silicon, a step unavailable to Intel because of their
need to remain compatible with predecessor processors
such as the 8080, the 8008, the 4040, and the 4004.

> (He has HDDriver on order from the UK... will this fix the problem?)

It surely will. HDDRIVER works fine with ZIP and JAZ drives and even
comes with support for their unique read/write protection features.

So these programs obviously don't support partitions larger than 512
MByte.

> My cluster size is now 32767. What would choosing the "minimum
> sector size" option have done?

32767 is impossible because cluster sizes are alwasy a power of 2. So
32768 is likely. With minimum sector size you get half this size.

> PS. I'll be upgrading to HDD 7.12 wehn Systems for Tomorrow gets
> it in. Is that fully Afterburner compatible?

Yes, I think so, because I know Afterburner users running this version.
Note, however, that the Afterburner will always be a potential problem
because of its wrong processor cache handling during the boot phase.

I wonder that as well. I was going to buy it but than I realized that
it wont work with what I want it to. I does not handle VFAT or
big partitions either. If there would be an update I would get it
pronto.

A shame that Oregon had to leave the Atari market and it looks like
they have a hard time staying alive at the Amiga market as well. They
even asked people to buy/update the software as they were running
out of steam...

Sad story realy.

Well, this is very easy to say when you don't even have the computer
on paper yet. They claim "100%" _code_ compatible. I guess they can
define that how ever they want.

> My god i hope this computer will come true!
> This is the new Atari i have always wanted!

Sure. Sounds nice and I hope they can deliver what they promiss.

Ummm, that is to bad. I ordered a fast ram card for my TT and didn't have much of a problem. I think it only took about three weeks after their bank got the transfer. But others have said they had a lot of problems (Mario for one) in getting their order filled. The do stock a lot of nice STuff, so it would be a shame to omit them, but they do have to deliver.
On ocassion, ASH has replied to my mails, a gent named Volker (pls chk spelling). He seems to write very good english, so I would assume he speaks it well too. A direct phone order to ASH might be the safest way to go now a days.......to bad. They (ASH) did state that they would rather you purchase from System Solutions from outside Germany. The only problem I have with that is they won't honer upgrades that I purchased thru Toad or Computer Direct, even thou the disk has S/S on the label:(. I have an inside contact that takes care of me however:).
Hallo Commander!:)

Well I can just say that I have got another answer and it might be
true...
anyway I don't have any burner yet so it's no hurry. As I wont get
any burner as long as there are no good software for it I will just
sitt and wait and see what happens. Sounds Pools software is way to
expensive if you ask me.

But thanks for the info.

1085. Software Service Seidel

Newsgroup: comp.sys.atari.st
Date: 1998-01-19 00:00:00 UTC
From: Markus Fichtenbauer <fichti@wvnet.REMOVE_IT.at>
Message-ID: <34C3D65C.3280@wvnet.REMOVE_IT.at>
Source record: 109600

It's sad, but there are more and more companies who fools
the ATARI-users and STEAL their money.

Here is my story with "Software Service Seidel":

In June 1997 I ordered Calamus95, ATARI Compendium books, and the
bundle Arabesque2Home with Convector2 from Software Service Seidel.
With my order I sent a crossed-cheque over DM 521,- !!!

A few weeks later they cashed the cheque, but I didn't receive
anything from them. After I called them by phone they told me,
that there is a problem with the availability of the Compendium
books, and that's why the delivery is delayed. They suggested
to take the CD instead of the books, because the CD is available.

A few weeks passed, and I again reveived nothing from Software
Service Seidel. I called them on the phone again, and now they
told me, that Arabesque2-bundle is not available, but in the
next days I will hear from them. And so I should wait again...

Another few weeks passed, and I called them on the phone again.
"Still not available" was the answer, I shall wait... :-(((
In November the order was cancelled by Software Service Seidel.
And they told me on the phone, that I will get back my money
in the next days. They will send me a cheque.

But nothing happens. I called them on the phone again and again
and I heard always new excuses. Mr. Seidel isn't in the office
today, and so he can't sign the cheque. Or they say, that they
will report it to their book-keeping. What a wonderful book-
keeping, when it isn't correct.

At the begin of the year I sent a registered letter to
Jan-Hendrik Seidel. And I got NO RESPONSE, although I wrote
that I will post my story here if I here nothing from them
until 15.01.1998 !

So I also strongly recommend *NOT* to order from
Software Service Seidel!

Very unreliable company ! Don't trust them !

All of you that are fooled by some german companies,
there is a good possibility to bring the stories to TV
The more of you shout out the better ;-)

Write an email to the german TV-Station "RTL".
Then they will deal with this subject in their

telecast "Wie bitte" !

Send me a PM to get their e-mail address.

PS1: But there are still reliable companies !!!
Very GOOD experiences I made with FALKE VERLAG !!!
They send the items within a few days.
Application Systems Heidelberg and the Austrian
distributor Putz are also very reliable.
With M.u.C.S I also had no problems.

PS2: Now I am waiting for N.AES from Woller and link
since middle of December.
And I also wait for some items from Dream Systems
since December.

I hope I will get it...Dream Systems already cashed
my cheque.

PS3: What about a list here in the Usenet with good and
bad companies?

best regards

Markus Fichtenbauer

```
j > Is there any way to fix this? Hardware ...? HS-modem setup
j > ...? Anything ...?

Using the SCC DMA (serial 2 only) would solve the priority problem,
since the DMA interupt has the same priority as the ACSI (level 6).
In addition, it requires only a fraction of the interupts (1 per
packet instead of 1 per byte, more or less).

As it turns out, I have written such a driver, but it requires
modifying the TCP/IP interface to take advantage of the new features.

You can use a PC BUS mouse:
---------->8----------
From mparrott@kendaco.telebyte.comThu Mar 21 11:33:03 1996
Date: 21 MAR 1996 03:52:47 GMT
From: Michael Parrott <mparrott@kendaco.telebyte.com>
Newsgroups: comp.sys.atari.st
Subject: Connecting a PC mouse to Atari ST

Enough people have asked that I've assembled some instructions for
modifying a Microsoft Mouse (Bus Version Only!) to work with an Atari
ST/STE/TT/Falcon. I have only tested this with the Microsoft Mouse II,
but it should work with any mouse/trakball designed for a bus interface
card on a PC. Included are general instructions for modifying the PC Bus
mouse itself and for building an interface box which will allow any PC
Bus mouse/trakball to be connected to an Atari ST/STE/TT/Falcon without
further modification. Any particulars mentioned herein can easily be
modified to fit whatever situation you may find yourself in - at least
with respect to making a PC Bus mouse work on your Atari.

First, a NOTE: I am not in any way, shape or form responsible for any
harm that may come to you, your computer, your mouse or other controller
device, or anything whatsoever, through your use of the information
contained in this file. While I believe all of the information to be
accurate, I make no guarantees as to its accuracy and have no guarantee
that you will perform everything in a safe manner or according the
instructions provided. So you're on you're own here; however, it did
work for me.

STUFF YOU MIGHT NEED FOR THIS PROJECT:

(items with "+" are for building the box)
(and may not be needed if you plan to)
(modify the bus device directly)

- Bus Mouse/Trakball + Electronics Project Box

+ Coffee, tea, soda, milk, water, beer, hard liquor,
Everclear or whatever liquid refreshment/stimulant
you feel necessary to continue

- Atari Mouse Cord (recommended) -OR- joystick cord with all 9
wires -OR- nine-wire conductor and DB-9 connector

- Solder & Soldering Iron + Hot Glue Gun & glue sticks

- Ohmmeter/Multimeter + Drill

- No. 1 Philips and Slot screwdrivers

+ Aspirin or Non-aspirin pain reliever (just in case)

ON WITH THE SHOW

Here are the pin and signal assignments for the PC Bus mouse and Atari
mouse connectors:

Bus Mouse Signal Atari Mouse
--------- ------ -----------
1 Ground 8
2 Rt Btn 9 (Right Button)
3 -- -
4 -- -
5 LftBtn 6 (Left Button)
6 YA 3 (Vertical Cursor)
7 YB 4
8 XA 1 (Horizontal Cursor)
9 XB 2
10 +5v DC 7

Note that, as it pertains to this modification, pin 5 is not used on
the Atari connector, pin 3 does not exist on the Bus connector, and pin
4 on the Bus connector is not used.

Looking in from the business end of the connectors (i.e., the part
that normally plugs into the computer), the pins are labeled as follows
for the purposes of this mod (this may or may not match any standard
numbering conventions):

Bus Mouse Atari Mouse
--------- -----------

/-----\
--------- -------------
/ 4 2 1 \ \ 5 4 3 2 1 /
| 8 7 6 5 | \ 9 8 7 6 /
\ 10 9 / ---------

Note the blank area at the top of the "Bus Mouse" figure. This is a
"key" of sorts to prevent improper insertion of the plug, and is a handy

way to differentiate between a Bus plug and a PS/2 plug, both of which are round. Another way to tell the two apart is the Bus configuration has ten places for pins, while the PS/2 configuration has only 6 pins. YOU MUST USE A BUS MOUSE/TRAKBALL FOR THIS PROJECT TO WORK. Serial, PS/2 and MousePort mice do not have the proper signals to work with the Atari mouse port.

BEFORE GETTING STARTED:

There's several ways this mod can be done, and you'll want to prepare for each a little differently. The first step, of course, to read over all the instructions carefully and make sure you understand them before proceeding.

Obviously, the mouse/trakball has to plug into the Atari. The best way to do this is to use the cord from an unused Atari mouse. The second best way is to use a DB-9 connector, which can be attached directly to the cord of the bus mouse, or to an un-used Atari mouse cord which can then be patched to the bus mouse. Note that the mouse cord MUST HAVE ALL CONDUCTORS AVAILABLE with the exception of pin 5. Not all mice use the same number of conductors, and many have simply left the unused conductors out of the cord. You must use a cord which has the required conductors (1-4, 6-9) available for use. Joystick cables with the required conductors will also work, but are not as flexible as mouse cords; the same is true of most other cables you might make up yourself.

To simplify things later on, you might go ahead and determine which wire in the cable(s) are connected to which pins. Each wire should be a different color, which makes it easy to create a table listing each wire color and the pin it goes to. If the wires are all the same color, simply label each wire with a piece of tape and the number of the pin it connects with. You can get this information either by opening up the body of the PC Bus mouse and using an ohmmeter to trace continuity; checking things out visually, or by using a very small divining rod and immense faith in your ability to use it.

TO MODIFY THE BUS MOUSE/TRAKBALL DIRECTLY:

Using whatever 9-pin connector/cable combination you have chosen to use, simply connect the pins/wires from the Bus mouse connector to the Atari mouse connector as described in the chart at the beginning of this text.

If you will be cutting the connector off of the Bus mouse cord and replacing it with an Atari/DB-9 connector, make sure you have already generated a listing of what color wires go to what pins! Otherwise you'll be hard pressed to tell which wires go where and may never get it working right.

Once the connections have been made, check all of them and if all looks well, plug it in and give it a go. Make sure to check out all

functions of the mouse (cursor up/down/left/right, left/right buttons). If it doesn't work properly, refer to TROUBLESHOOTING below for some tips. If it does work, congratualtions!

TO BUILD A BUS MOUSE/TRAKBALL INTERFACE

If you have an un-used IBM bus card handy, it can be used to construct a plug-in box which will allow the use of any other bus controller (i.e., mice, trakballs or pen mice) without having to perform further modifications to equipment. The Microsoft Bus mouse comes with an 8-bit ISA Bus card; if the PC Bus mouse you obtained did not come with a card and you do not have another, you might try obtaining just the 10-pin Bus jack from an electronics supply store or via mail order.

My box uses the card that came with the Microsoft Bus mouse. If one bends the metal bracket on the card parallel to each side of the circuit card and cuts the circuit card at the bracket ends, the resulting card will fit into most small electronics project boxes of about 2" x 2" x 3". I took the resulting card to a local Radio Shack and found a box that would fit for under $3.00.

Place the card into the box and determine where to drill two holes: A big one for the PC Bus mouse to plug into the card, and a smaller one for the mouse cord which will plug into the Atari.

Once the holes are drilled, use an ohmmeter to determine where, on the "chopped" circuit board, the pins of the jack can be accessed. This allows for easier connecting of the Atari mouse cable to the circuit card. Ideally there should be a row of un-used solder pads on the top of the circuit board, near the jack, which can be used for this purpose. Keep good notes and/or label the solder pads so you know which ones lead to which pins on the bus jack. Also keep in mind that the pin numbers on the jack are mirrored left-to-right, as compared to looking at the bus connector on the mouse itself.

Thread the end of the cable which will be leading to the Atari connector through the small hole in the project box so that the plug is outside the box and the leads are accessable within the box. Tie a knot in the cable about three inches from the ends of the leads to prevent the cord from being pulled out from the plug end.

Solder the appropriate wires of the Atari cord to the solder pads on the circuit card which match the proper pins on the Bus connector. Before connecting the box to the Atari for testing, double check all connections my using an ohmmeter, making sure the PC Bus pin-to-Atari pin assignments are correct.

Test the box by plugging the Atari connector into the computer and the Bus mouse into the jack of the circuit card, making sure to test all functions (left/right/up/down cursor; left/right click). If there's a God in Heaven and all is right with the world, everything will function properly. If it doesn't, take a look at TROUBLESHOOTING below.

Once you've verified that all works well, place the ciruit board in the project box so the mouse connector lines up with the hole drilled for it and hot-glue the circuit board in place using plenty of glue along the edges of the metal bracket. Pull the mouse cord to the Atari connector so the knot in the cable is placed against the inside of the project box, making sure the leads to the ciruit board aren't being stressed, and hot glue that in place as well. Before securing the lid to the box, make sure that the PC Bus mouse easily plugs into the connector in the box. Then secure the lid to the box, and you're good to go!

You now have an interface that should let you plug any standard PC Bus mouse, trakball or cheese grater directly to the Atari without any further modification. In other words, you won't have to do this again and won't have the excuse again later, so you might as well sit back and have that beer now.

TROUBLESHOOTING

Those making an interface box will likely experience the most difficulty, as it is easy to lose track of where on the circuit board one can make a good connection with a particular pin on the connector. Being careful and meticulous and using a "paper brain" will help avoid problems later on.

The first thing to do, of course, is to check all connections to make sure the correct pins are connected to each other, and check each connection to make sure it is electrically secure and complete. If this fails, try using some of the tips below, which is basically the same advice in table form: ;)

Symptom Probable Cause Solution
==== ==== ====

Many thanks to everyone who's ever written anything whatsoever about
modifying a bus mouse to work on an Atari computer, whether in textual
or graphic format. I've tried not to draw directly from any other source
for this file, but have surely been influenced by other information I've
found on the subject, so thanks to those folk, whomever they may be,
are definitely in order. So there.

>PS3: What about a list here in the Usenet with good and
> bad companies?

You must be aware that a lot of compagnies have really disgusting
behaviour when it becomes a money question ...
Let's see what I'm talking about:
Being a president of an atari club since 1989 (counting about 30
members), I can say the badest money practice in France is cashing
your cheques a long time BEFORE they are able to send you the product
you ordered ...
In the past about 15 members had problems with french compagnies ...
the only serious french compagnies are (for us):
-Terre du Milieu
-ASF
-Parx (now out ... a pity)
To be clear we surely have not bought products with every french
compagny of course ... but ... a lot ... which even don't exist
anymore today or have changed their names ...
It's a current practice on the market.

And I must say that until now I never encountered any problems with
foreign compagnies like HiSoft, Gribnif Software, Systems Solutions,
ASH, Homa Systems which are really good commercials !

The above related problems were: no software available, no hardware
available, sometimes we encountered the compagnies at atari shows and
they always succeeded to turn the problem to their advantage ...

WHEN IT'S QUESTION OF MONEY : DON'T ACCEPT ANY ARRANGEMENT !!!
ABOVE ALL WHEN THEY HAVE CASHED YOUR MONEY SINCE A LONG TIME AGO

In some cases ... about 5 ... we had to menace them to make some
"good" publicity on the net ... And sometimes we did !

At this time, we always succeeded to recover the money of our members
.. it was not always easy, but now we KNOW which compagny we
absolutely must AVOID.
This make sense to become a member of atari associations ... they can
help you in these cases because, when you are alone, you are a prey.
If you need more informations, feel absolutely free to send me an email
and I will answer relating our very bad money experiences ...
we have had A LOT with existing compagnies !!!

So, I must counsel you to AVOID any payment of any kind if you are not sure of the compagny ... It can be very disastrous for you and your family to have money injury.

It's not because we are customers of a reduced computing market that we must accept any strange, bad, disgusting behaviour from the remaining atari related compagnies !

Be carefull friends, it always happens when you don't think about !

Bonjour! I recently downloaded STinG 1.12, and unfortunately, it's not working :(It makes the connection just fine, buy when it tries to initialize the connection the computer just sits there while the timer ticks down. It gets to about 39-41 seconds (from 59) and the modem goes off the hook.

I'm using an Atari Falcon 030 with 4 Megs of Ram and Tos 4.04. If anybody can offer some information I will be greatly appreciative.

Thanks in advance,
George Garner

1090. !! HELP URGENTLY NEEDED SETTING UP ATARI GNU GCC C++ !!

Newsgroup: comp.sys.atari.st
Date: 1998-01-19 00:00:00 UTC
From: Ross Purves <ep111@city.ac.uk>
Message-ID: <Pine.GSO.3.95q.980119181138.21619B-100000@swindon>
Source record: 109605

Please can anyone help me with some problems I am having setting up GNU GCC C++ on the Atari ST:

(I have asked Jwahar Bammi himself but he no longer has an Atari and was unable to help.)

I have successfully setup the 2.1 distribution of gcc that I obtained from the FaST Club (UK) and subsequently updated the executables with those from the 2.3 and 2.5.8 releases.

Using this setup I have compiled some fairly simple c++ code but on trying more substantial source I have been confronted with loads of warnings and errors which have looked like they originate from the include files and libraries. I am still using the libraries and includes I got with the 2.1 distribution (includes = patchlevel=7). The source code I have tried is definitely error-free because I have successfully compiled it on GNU GCC on my college's Unix system.

I have obtained more recent libraries and includes from the Atari Gnu directory at FTP UMICH..... These comprise of the following files:

GPINC20.ZOO
GPLIBO20.ZOO
GPLIBS20.ZOO

When expanded the source code archive has a patchlevel=20 file in it. How do I make these newer up dated libraries with my system? The addition of makefiles etc in these archives make me assume I have to do something with 'make' to update the g++ library but I really don't understand how to do this. Can anyone help me??

The following also concern me:

1. Has anyone ever managed to set up a complete Atari GNU GCC C++ system using all the most updated components. Subsequently, have they been able to compile any really substantial code using it.

2. After trawling through old newsgroup stuff I have found mention of newer versions of the compiler than 2.5.8. Do these exist and if so what do they need to run? (ie Mint or Falcon/TT). Are they more stable/better versions?

3. Has anyone used the Software Developer's Kit update 1997 version of GNC C++, is it any good? What libraries does it use?

4. Again looking at newsgroup articles, it appears Atari gcc g++ has been steadily disappearing from subject lines. Is anyone still using this software? Is there anyone who has battled with the infuriating

TEX docs and put together a usable 'modern' system with updated libraries etc. Is it all worth it or should I jump ship to Borland C++ or the Unix GCC now whilst there's still time before my college project deadline?

I am sorry this posting is so long but I have got SO FRUSTRATED trying to set this monster up - it has been very lonely. Surely there is someone somewhere who has the knowhow. Please help me out.

Thanks

Ross

Essentially if you order something through the mail and pay for it in advance
you are entitled to the product or your money back. Surprise surprise but mail
order fraud is not new. It also happens alot when the manufacturer has cash
flow problems and uses your money to solve them.

Now in Canada we have very good laws protecting us from mail order fraud.
However most people don't follow up. Generally you kiss your money good-bye
send the local authorities in, (there is usually a fraud squad with local dept.)
and the bad guy is charged with a federal offense (very bad). Sometimes this
little wake up call, sorts a "misunderstanding out in no time and your goods
or a monetary reimbursement is offered.".

In Motorcycle racing like computers, this kind of fraud is prolific.

I also know that they have similar laws in the United States.
Again most people just let it slide, but you don't have too.
I am not certain about Europe in General, but all you need to do is determine
the origin of the goods and check out their laws. Many countries regard the
mail as sacred and have reciprical laws, so it doesn't hurt to pursue the matter.

Finally, old English law is based on LET THE BUYER BEWARE.
Damn the English for their legal views of a purchased good.

Needless to say, try to protect yourself always.

This is true with me as well. It also happens if your provider disconnects you and you try to exit NEWsie. I am not certain why, but if this happens Newsie will switch the order of my folders around and create new folders as well such as folder "y" or a folder "8" only put the 8 sideways:-). I think it may be virtual directory or something that is supposedly hidden. Also If this occurs I can find all the files I have deleted since Dec 3 1997.

> and unless I perform a hard reboot, I get random file
>corruption, on various partitions).
>

Yes, sometimes I need to reboot 4 or 5 times to end up with a clean system. Early on a warm reboot would corrupt me boot sector (ARGGHH), however I only do cold boots now.

>On the other hand, when I remember to do things in the proper
>sequence, Newsie is quite pleasant to use.

I find this very TRUE. I thought most of my problems were TOS 1.0 probs, and after I followed certain procedures, everything works great. I must say that I didn't see some of these things with version .82. And I haven't actually had it overwrite any files (I hope?:-). Some files do end up laying outside the NEWsie work path and in the root directory of my HD, in this circumstances.

I used to experience this problem on a regular basis. Like you, there appeared to be no rhyme or reason for it. The problem is gone with v0.84, although I don't recall this happening with v0.82 either.

I still have the odd problem with my default.grp file becoming corrupted after a post. And the odd time the last (or only) reference header gets truncated during a 'followup', like with this one in which I had to manually add 'co.uk>'.

There was a fault in the o.inf. This part of the problem is solved now.

Try 1-800-638-9636 for Genie customer service. There still is an
active, though small, contingent of Atari users there.

It's good to see the Computer Dugeon is back as well.

Later,

JAB

That sounds like more of a problem that some were having a while ago, even on-line. Sometimes NEWSie (for whatever reason) gets only partial messages. When you load the next message, it gets mixed up with the previous one. Not to much trouble for text, but it really messes up binaries:). I don't really know when the problem went away for me, but my setup is the same as yours (except MagiC, NAES and MiNT here) and I am using the V.84 of NEWSie. I experienced the problem on a Unix based server, while I had no problems on an NT server. Now both work fine. I havent' had a split message in a looooooong time.

Mike

> >mention of them.

Local.fee are not necessary but can be useful to know your time and
money spent on the Net (if you adapt them to where you live - there is
a text explaing how it works). You just need one and tell the dialer
to read it (Phone and ISP options).

> Now, I tried at least 3 times to get a connection yesterday, but I didn't

Yup, this is a bit tricky. Keep on reading.

> And I don't know what is Atari specific and what is PPP specific (so I
> don't know what to ask my provider yet).
> This is the information I have from my provider:
> ---
> Domain name server (DNS1): 194.143.8.25
> Ekstra domain name server (DNS2): 194.143.8.27

Well, these are essential. Go in the protocols CPX, 'Resolver
section', and add those numbers in the 'Name server' field. Do same in
the Dialer config, in the adressing section, and click the 'add'
button to enter the first then 'add' again for the second DNS. Those
DNS things are the servers that convert doted numbers into human
readable name ('www'... gives you this tasty netsurfer accent ;-)).

> Subnet mask: 255.255.255.0

Not needed, AFAIK. (nowhere to put this !)

> DNS-adresse Port-no.

> Anonymous ftp: ftp.sn.no 21/tcp
> ---

Ah, your domain name should be 'sn.no'. Type it in 'Domain field' in the
Internal CPX, and in the 'Fully Qualified Domain Name' in the Dialer
Config (adressing).

> And apparently I'm supposed to use PAP to make it work.

To setup the PAP, go into the 'Port parameters' and type in your PAP ID
and PASSWORD (blind line).

> So, what do I do next?
> Is there any additional information I should ask my provider for?

Hum, nooo... maybe proxy server for CAB.

> Back to STing, this is what I understand so far (having been able to set

> delays though).

After 60 seconds, you may be hooked off if no connection succeed.

> -"sting port setup CPX" : I'm a bit confused about this module. I've set it

If I remember, port CPX is used for serial connexion via another
computer. You don't need it as you use a modem.

> -"sting protocols CPX" : I don't know which values I should insert here -is
> it the PPP stuff or local STing stuff we're talking about here?

Answer is above. Better put it in both CPXs and Dialer config.

> -"serial port CPX" : this is ofcourse set to 38400 bps/8 bit/no parity/
> 1 stop bit and RTS/CTS flow control.
> in the "driver" part of the CPX, should I set "DTR" on or off?
> The buffer sizes are set to 256/256.

Don't know about that. On my Falcon, it shows 512/512, maybe because
I've set this in scc.prg. Can't remember...

> (my modem is a US Robotics "Sportster" 28.2K and I've got "RSVE"
> installed to get the higher speed needed as well as HSmodem ofcourse).

Humm, RSVF is shown because HSMODEM is used. These two go together.

Activate Dialer's "Save Debugging Information" option, and send me the
resulting DEBUG.LOG.

> -"sting internals CPX" : this is only used to switch on/off STing
> (when I use a terminal connection I have to switch it off, or else
> it'll block the modem port).

No. The modem port is blocked only if the PORT is activated by either the
"Port Setup" CPX or the Dialer.

Desactivating STinG completely is necessary only for using some Zmodem
implementations which are badly programmed, for CPU hog reasons.

> -"sting port setup CPX" : I'm a bit confused about this module. I've set it

Just don't touch it unless you build a LAN.

> -"sting protocols CPX" : I don't know which values I should insert here -is
> it the PPP stuff or local STing stuff we're talking about here?

Keep the defaults unless you know what they mean. The defaults are sensible
values.

> -"serial port CPX" : this is ofcourse set to 38400 bps/8 bit/no parity/
> 1 stop bit and RTS/CTS flow control.
> in the "driver" part of the CPX, should I set "DTR" on or off?

Irrelevant. The Dialer sets it. DTR off is conceptually the proper choice,
but it really doesn't matter.

> Can someone please explain this?

There are a lot more than 4 ports in TCP/IP (64K?), and you can have many connections on each port. A port is usually dedicated to a certain service, e.g. port 21 for ftp, port 23 for telnet, port 80 for http and so on. There's no problem in establishing multiple connections on the same port, e.g. run 20 ftp-sessions to 20 different servers. A bit slow over the modem perhaps ;-)

> Obviously you guys are having problems, but is it NEWSie???

All of this seems similar as my problem with Magic and internet stuff.
Are you people using Magic when having these troubles ? I don't use
Newsie myself. But I use Cab, Popwatch, Newswatch, Okami... and have had
lost files/clusters too. No problemo in single Tos, only with Magic. So
there is perhaps a problem with the combo Sting 1.12/magic ? (Peter ?)
I'm back to single Tos for the moment. I'll re-install Sting 1.08 that
used to work well on my setup and see what happens.

Check out the Quick FAQ, it's all in there...

Basically, on an STFM, you'll need either to be the king of the soldering
iron, or to buy a RAM upgrade board from any of the remaining Atari dealers,
depending on which point of the Globe you live in.

Cheers,

I have an NEC Powermate 486dx-33 with 8MB RAM, 512MB HD, 16-bit sound, 2x CD, 1MB TSeng SVGA Video, Keyboard...No monitor or mouse (PS2 Style).

Want to trade it for:

TT030 with 2MB+ RAM, 40+MB SCSI Hard Disk, TOS 3, 720K Floppy (1.44MB Preferred), TT Color Monitor, Keyboard, Mouse (if it is different from a standard ST mouse), and any necessary connecting cables.

Please e-mail Chris.Friend@juno.com.

Thanks in advance.

P.S. - I may be able to stick 4MB more into that NEC if I can dig some up. Also, I can load any OS you want onto it (Warp, Windows 95, Windows 3.1) and plenty of programs before I ship.

JV>Where the hell have you found or bought the module ?

I got the module from TKR (Kiel, Germany) after I asked if there are any for sale. I was told, that there were no modules, only some used modules sent back by customers etc. I could use these on my own risk, as it is not shure, if any of these work. I have 10 modules here and have tested 1 till now.
When I've tested the others, I will phone with TKR, to find out, what I'm going to do with the rest.

Well, February is almost here. The premier issue of the ST+ Fanzine is imminent. Still looking for distributors and advertisers, but that's grist for a different message.

If you're a US (or Mexican) resident interested in receiving the February issue of ST+ Fanzine, then please stop by my page. All relevant (along with some slightly irrelevant) information can be found there. The location can be found in the signature. This is also a good opportunity if you've had a bad week and want to complain about *something* but would prefer to have something concrete to complain about, just relieve your tension by whining about my site :) .

Stop by, look it over, and send me your questions, comments, or gripes.

For those of you without web access, email me and I'll send you all of the details.

Terry

Mike,

Notice how the reference header in this message and your followup is
truncated ('o.uk>' is missing). NEWSie can't handle it properly, probably
because of its length. Keep an eye out for this (simple enough to repair
manually while in the editor). I've seen other NEWSie posts with the same
problem.

Are you reading this, John?

No, Uwe doe not underestimate the power to the 6800 series chips - he
DOES know their limitations a lot better than this poster.

I sometimes wonder where these people come from. I LOVE my TT - but to
state that the 030 chip is 90% (OK 89%) as fast as a a P75 only shows
complete stupidity (I use PC's and MAC's at work, but do the serious
stuff on my TT at home :)).

Alan,

Check the "Time Out" setting in Newsie's Preference box. You will find
it in the "Server" box. Set the time outs for at least 60 seconds. I
seem to remember that Newsie 0.82 may have had a default of 5 or 10
seconds. If the time out setting is to short - any delay from your
newsfeed will result in Newsie thinking the file has ended.

It was easy enough to use once I got it in the right place in the auto
folder (after magic, before nvdi basically). It just prompted me for a
virtual width and height then got on with it.

>There's a large screen emulator that can be used even without the hardware

>
>That's right, tho' I found setting it up a touch tricky at first.

It was a bit flakey with some settings yes (or something else might
have been). iirc, I settled on whatever mono settings which resulted
in low rez being 640x400. Not too much scrolling involved, and
multiples of the actual screen appeared more stable.

... and similarly with comp.lang.c++ there are so many postings each
day that you end up devoting more time to wading through what you
don't want than what you do want. However, to find decent links it is
necessary.

>>>Also - Is there a C++ programme and for the atari - for so where

>
>anyone?
>Also - will this include complier??

Yes. iirc, the archive should have "g++" or "gcc" in its name - you
might try umich, if it's there then it is more likely to be in
english.

It really comes down to why you want to learn C++. If you want to
learn the language then go for it, but if your priorities are making
atari programs then imo you'd be far better off with Lattice or PureC
which will be much more productive. Don't get me wrong, I like C++ and
I'm learning it myself. Sadly, not on the atari though. :-|

I'm working heavily with Java under Unix, i. e. I know the resources it
requires.
What I wanted to say is that on standard Atari machines Java will be
slow. Not on machines with an 040 or 060. But on all the others. I guess
the TT is fast enough as a runtime environment but an ST is unusable. 4
MByte might even be insufficient to run Java at all.

Those that can read German manuals should probably have a look at
DISKUS. This hard disk and floppy disk tool supports big partitions as
well as DOS compatible partitions:

The usual way is to get a Frontier or Marpet RAM extension. Easy to fit - use SIMMs. This will get you to 2Mb and then 4Mb.

The ST can only support 2 RAM banks. The 1040 has 2 banks of 512Kb each on the PCB. Both these extensions substitute 2Mb SIMMs in either/both banks.

There is a DIY solution documented by Barry Orlando which involves doctoring chip carriers to connect 1Mbit chips to the PCB insted of the 256Kbit chips which are there ATM. You shouldn't try this unless you are experienced in soldering and finding your way around a PCB. There are about 560 soldered joints to be made. I did it myself but spent a long time tracking down the last 3 intermittent bad joints!

Hmm .. I used to get this. I think it was due to the serial port
sending spurious end-of-message characters. I forget how I cured it
now but I know it improved things if I reduced the serial port speed.

Aha, I didn't know that it could optimize/fix partitions as well. I
thought
it was only a diskmonitor. Does it support VFAT partitions as well?
It doesn't say.

So any chance for a english version? Now when DiamondEdge/Back is gone
there should be a market for it (I guess there would be a market with
DiamondEdge available as well).

> off the hook.

Just to add to this, with yet another STiNG query...

I'm using a very basic setup a 1040ste and a single floppy, with a 2400 baud modem...

My "service provider" is through my university, so it's a standard dialup account which requires a username and password, and once the connection is made sending the command "ppp" switches to ppp.

If I don't use a dial-up script I get "Initializing connection" until the timer runs out. The same IP number is always allocated to the same phone number, so I wrote a simple script that sends my username and password, and then sends the ppp command.

What happens now is that it goes through the login procedure, and I get "Connection Established" in the dialog.

However, there then follows some disk activity, and the dialog then returns to "Initialising connection", which eventually times out. But, I did managed to successfully connect once. I waited until the script was in progress, and then ejected the disk. After cancelling the disk requests several times, I put the disk back in, and suddenly I had a fully working PPP connection that allowed me to ping hosts, traceroute over a wide area, resolve names etc.

My only guess is that the system is attempting to do a PAP style login as well as using my script, but I do have my PAP username and password blank in default.crg and dial.scr. I thought that the login might be timing out before the connection was established, due to using a 2400 baud modem, but setting it to a much longer time didn't help.

I've just read another message and discovered there is a debug.log file - (I only noticed the dial.log file before), so I could bring a copy of this to work if it helps.

Any ideas would be appreciated - it's so frustrating to see it actually work and then not be able to recreate the conditions... ;)

Hi Terry. Its just a standard 14" SVGA monitor. I'm trying to use Thing
1.09 as the desktop. Magxdesk might have run in 256, but Magxdesk kept
corrupting Magx.inf so I quit using it. Under Thing if I change
to 256 rez it just ignores it, and saving the new rez has no
effect. I'm trying to do everything under Magic, but I keep having to
reboot under TOS to do graphic work.

Happy Festivus,
Dave

Hi everyone,
I have a fried who needs a mono monitor for a second hand ST he has
just
bought for running Cubase on. Ideally he would like to buy one new from

somewhere in the UK. Does anyone know who might sell them? I've tried
all the UK links I can find (Power, Hisoft, First, etc.) but none have
monitors.
Is there a ST<->VGA widget which allows you to use a PC multisync (not a

cheap option!).

Any help greatly appreciated.

TTFN, Jason.

George, don't know if it applies to you, but let me tell you what happened
to me! I D/L'ed all the latest files from Peter's Web site, and when I copied
the STing auto folder program into my auto folder, I assumed it would just
replace the old STing program. Well, it did-but it also but it in a very
different order! As you know, STing must be last in the Auto folder-just
make sure you didn't do the same thing I did-because when I ran the new
version, it did exactly what you are describing! Hope this helps... :-)

Well, yes I did mention it to him, and I think he said that the
problem had more to do with Sting (don't you love it when programmers
start pointing fingers at each other?).

Now I don't want to start a flame war, or cause any bruised feelings,
but it would be really wonderful if John and Peter could get together
and sort out some of the routines that each program uses - as if
either of you have the time...

FIRST THE SOFTWARE:

1. Pagestream: Complete with manuals $ 25

2. TRUEPAINT V 1.02 $18 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B\W. to true color.

3. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

4. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio-video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $20 (Falcon).
Needs Multitos.

7. LDW power: Excellent spreadsheet program. It makes all the files you create with
this software compatible with the Lotus 123 format (has acc/prg. covert utility)
$ 2.00 no manual original disk only. (all Ataris).

HARDWARE

1.ST 1040F 1MB ram. This machine has an audio output jack (RCA female) so you
can plug in to your external ampolifier. No need for pre-amp. It will go with
hayes modem/cable.

2. Intel External 144e (14.4Kb) FAX/MODEM with cable for Atari or pc. $39.
(has original PC software)

3.Atari PS for external Disk Drive $10

4.external PS for the 520ST $ 8.00

Free stuff (with the buying of any of the items :) :

Free manuals: HD Driver 4 rev 1.1 1/96
Deskjet utilities pack v 1.2
Calendar and appointments
Atari falcon AFM; D2D; SAM.
SM 124
Imagecopy 2

Pagestream 2 quick start manual
available
omnires
truepaint
Soft-hard:
- Omnires Monitor emulator for the ST.
-External floppy drive 1DD good case/mechanism.
-Falcon F-16 fighter simulator
-STOS the game creator
-Lure of the Temptress
-Jaws of Cerberus
-Knightmare
-Space quest 3

If interested send ZIP code to ask UPS for charges.. For software I can send it for $3.00 US priority mail. (if you are in the US; I am willing to send abroad also) Regards, Phil.

Is this true? Nemesis and/or Screenblaster 2 are not recommended (or is this just with the Afterburner)? I've been using Screenblaster 2 for a while now with my 17 inch monitor, and it seems to work well, though I do get the occasional SCSI error.

Also, does anyone know if Nemesis is 100% CAF compatible?

This could be the problem, as I am using HDDriver 5.10. Anyone know of any specific problems with this version (again, without the Afterburner)? Does anyone know where a US user can upgrade to a newer version?

Hello,

I'm looking for a Syquest 270meg removeable hard drive. It must be in good shape, new or used. Internal or external would be fine. Already have the host adaptor, and the case space. This will go with my STe Thanks

That would be a rather weird ISP. Sure, it can be done, but there's no
point. If your ISP does this, it's good reason to actually change ISPs,
as this is insane.

Normally you can have as many connections as you like. I don't know if
MiNTnet imposes any limits. With STinG you can open connections until
you run out of memory. This can be hundreds or thousands (it'll slow
down due to this though), depending on your ALLOCMEM setting.

> Huh? I thought an 68000 was a 16 bit processor.

All 680x0s, the 68000 too, are internally (this is what software is
concerned with) real 32 bit CPUs.

There are lots of Ataris fitted with 68020 CPUs.

> problem,

You're a jerk ! You want your (hardly noticable) 5 % speedup while
not caring if others would suffer a serious speed loss in excess of
10 or even 20 % ! That's unbelievable ! You're the kind of person
who advocates the exclusive use of the Falcon's DSP for decoding
pictures in CAB, which would make CAB unusable for ST and TT owners.

I think you should reconsider your egoistic "Doesn't matter what others
suffer from as long as I get my benefit, even if it's hardly noticable"
attitude.

> as I suspect most "Web browsing Surfers" use a computer with
> better graphics than that of the humble old ST. ;-)

Where have you got this impression from ? I'd say you're wrong. The
(relative) percentage is certainly larger, but there are lots of
people out there surfing with their good old ST.

Should I mention that I do the STinG development on an ST ?

> My point being, is that these machines are all 030 or greater, so why
> not have a 32-bit version of CAB & ovl for these computers.

Which means your point is obsolete, as CAB and all OVLs always have been
32 bit versions.

> I don't want to criticize Alexander for his efforts, 'cause I think
> he's done a great job, but what is the point of having all this extra
> CPU grunt if programmes don't take full advantage of it?!

Taking 95 % advantage is enough if this means the resulting code is
usable with older CPUs without speed loss. And this means, no 030
optimisation.

Cheers Peter

> still going cheap...

If your serial ports are really dead, then most probably only the buffers
are affected (a pair of 1488 and 1489 chips for each port). They're cheap
and easily exchanged.

> since the DMA interupt has the same priority as the ACSI (level 6).

It has an even higher priority, since the SCC DMA is handled by the
TT-MFP, which has higher precedence than the ST-MFP, which is respon-
sible for ACSI. However, SCC DMA is possible with TT only, neither
Falcon nor the Mega STE has SCC DMA. With the TT on the other hand,
ACSI is generally irrelevant since people normally use the SCSI inter-
face. But still the SCSI DMA is lower priority than SCC DMA.

> In addition, it requires only a fraction of the interupts (1 per
> packet instead of 1 per byte, more or less).

This is for all SCC ports.

> As it turns out, I have written such a driver, but it requires
> modifying the TCP/IP interface to take advantage of the new features.

What is do not understand is the following :

I have a Mega STE directly linked to a Pentium box, using Modem 2 at
115200 bps. I can ftp files with a decent speed with hardly any dropped
packets, even if I use the mouse ! ??

Why has a slower CPU (68000 @ 16 MHz compared to TT's 68030 @ 32 MHz)
doing a much more complex protocol (TCP/IP compared to Zmodem) with a
lot more overhead due to complex headers so much less problems with
mouse movement during data transfer ? The explanation can only be the
Zmodem code. Apparently all available Zmodem implementations are badly
(with regard to timing) programmed. The latter is supported by the fact
that most Zmodems get problems already if the STinG interrupt steals a
few CPU cycles.

> etc. and might not even be needed (!?!??)

That's correct. As long as you're not into LANetworking, you can delete it.

> "Sting protocols CPX": I left everything but the "resolver" alone.
> For this I inserted the two nameserver addresses as
> shown above (or did it show up by itself from the
> "dial.scr" file??),

It is put in by the Dialer after login automatically. So this step is obsolete.
It should work even without touching the Protocols CPX.

> "serial port CPX": Is this really needed? I set this according to my modem
> (pretty straightforward) and pressed <save>.

If you use Atari's MODEM.CPX, then get rid of it. SERIAL.CPX is a much more
functional replacement.

At least it tells that he got STinG switched on. I still keep getting mail
from confused people whose only mistake is that they forgot to switch STinG
active :-(

> That should be enough info. Do they use VJHC? I've had 3 ISP's say use
> PAP, only works with one of'em. All work without it!

Can also be the other way round. The ISP should be able to tell.

> As a side note, when I don't use PAP, I don't need VJHC turned on.

There is no real connection between these two. The VJHC has only recently
been fixed with the SERIAL.STX V1.12. With earlier version it did not work
properly.

> use it :) An alternative is the new CRAP protocol <g>.

Are you after a second mention of you in the HYP ? Maybe for repeating old
jokes ;-)

> Subnet mask isn't needed as STinG "automagically" negotiates routing.

The reasoning is not quite correct. Subnet masks aren't needed for modem
connections, as they are point-to-point type connections.

Hallvard just reported he got his connection working. He did not mention
to me what was the reason.

Anybody who still has problems, should get a new MODULE.LZH from my web page
in a couple of days, in which I fixed another bad bug that prevented logins.
The bugfix is in beta test now and will hopefully go out Thursday or Friday.

Cheers Peter

1169. FS: Winnipeg Atari ST User Group fundraiser blowout! REDUCED MORE!

Newsgroup: comp.sys.atari.st
Date: 1998-01-20 00:00:00 UTC
From: Trevor Cordes <trevor@cyberspc.mb.ca>
Message-ID: <885353755.41C6@cyberspc.mb.ca>
Source record: 109586

GIANT ATARI ST HARDWARE / SOFTWARE / MAGAZINE / BOOK BLOWOUT!

The Winnipeg ST User's Group (STUG) is having a huge fundraiser to help keep our still-going-strong user group in good health, clear out some useful software that isn't getting much use, and help members do the same. The majority of the proceeds from all sales will go directly towards helping the club which has been promoting Atari since 1986 in Manitoba, Canada.

Please look through our list and pick out something you can provide a good home to. All hardware/software is fully guarenteed for 2 weeks from receipt. Everything comes with full email tech support from a knowledgable STUG member, we'll try our best to help you out!

If you want a whole bunch of stuff, discounts are available. Let us know what you think is a fair price. We just want good homes for all this STuff!

Every item purchased includes an issue of Atari User magazine FREE! Please specify which issues you want or random.

All prices are in US$ funds as most sales tend to be to the US and so it makes everything easier that way. Canadian prices should be calculated accordingly.

Shipping is extra and NOT included in the price listed.

Thanks for helping out our user group!

Trevor Cordes - STUG President
trevor@cyberspc.mb.ca

I partitioned the drive with HDRUTIL. I have an Afterburner which does not like ICD very much. The error Diamond Edge reported was a single bad cluster, but interestingly it made no attempt to fix it. That simgle error went away when I repartioned the drive to less than 500 mb sizes. Knife, on the other hand still had/has problems. It has now been retired in favor of DADE anyway.

A strange problem I noticed tonight is that while running HDRUTIL, it reports my Syquest 270 as an Adaptec 4000/4003/4xxx (something) but at boot time it displays correctly. What can that mean?

Greg

> I think you're mixing things a bit here. The four ppp/slip channels
> you're talking about is the number of *physical* connections
> possible with this interface. A client can establish a unlimited
> amount of connections though.
My limited understanding of this is that once you have establish a
connection to your internet provider you can then (for example),
start multiple ftp sessions, but only up to 4. Or say, have CAB
running twice and also a ftp session.
Can someone please explain this?

> > Is there a compiled 32-bit version of CAB 2.6?

> ??? We are talking about Atari software, not PC software. So we
> always use 32 Bit software ;-)
Huh? I thought an 68000 was a 16 bit processor.

> I understand this means a 68030 version ?
I believe a 68020 is also a 32-bit processor, in which case I mean
greater than or = to a 68020, but as there is no Atari 020 (well, as
far as I'm aware) then I guess I'm referring to all the 030/040/060
machines out there. :-)

> > Alexander were stupid if he created one. 68030 users gain

> (Hades, Milan, Afterburner, MagiCMac...)
...T40, T60.
> I think it would make sense to have a 030/040 optimized binary as
> well.
Yes, I agree. The ovl file as well.
One option could be to (on Lattice C at least) get the compiler to generate code for any Motorola 680x0 family processor. The code is optimized for the 68020/030, but does degrade the performance on a 68000. However, I don't see that the degrading performance is a big problem, as I suspect most "Web browsing Surfers" use a computer with better graphics than that of the humble old ST. ;-) Not that an ST isn't more than capable (for the most part) of handling Internet activity (I'm using an STe), but the whole point of Web browsing in my opinion, is being able to view pictures (and I don't just mean rude ones!). Web browsing is visual, and what better way of visualizing this medium than by using a computer with capable graphics, ie: a TT or Falcon. Sure, a stock standard TT running in 640*480 with 16 colours is still crude, but a Falcon in 256 or one of these high end Atari clones is going to look damn good!
My point being, is that these machines are all 030 or greater, so why not have a 32-bit version of CAB & ovl for these computers.

I don't want to criticize Alexander for his efforts, 'cause I think he's done a great job, but what is the point of having all this extra CPU grunt if programmes don't take full advantage of it?!
It is good to see that there is a DSP ovl file. Making use of the extra hardware. :-)

Anyway, just like to thank those who replied to my (demanding) questions via e-mail & this news group. Cheers.

Greetings all, does anyone know if the screensaver programme TwiLight
is suppose to run on an STe in mono?
I have the demo version from September 12th 1994 and all I get are
bombs. The auto programme works, but its main programme gives me
grief as a .ACC or .APP
32-bit code perhaps? Damn! If that's the case, then that's one more
reason why I'll look forward to getting a Falcon. ;-)

No. And there's no 'dramatic' speedup. I think most parts of this
speedup is based on the 68020 code and not on the FPU code. But all
in all, this version should be only a few percent faster.

1177. USA: UPDATE #2 -- Free or nearly free Atari hardware/software

Newsgroup: comp.sys.atari.st
Date: 1998-01-20 00:00:00 UTC
From: benles@powernet.net
Message-ID: <benles-2001982043550001@p1-8.reno.powernet.net>
Source record: 109638

Free or nearly free Atari hardware/software ----------

---- Latest news -----

Most people want the CD-ROM drive, since it has been discovered that it won't cost more than $5 to ship most places. Nobody wants the monitor yet, and two people want the Falcon. In the spirit of Micro$oft, "What do you want to get today?"

The Falcon trade deal has been altered slightly since I found out more about Gemulator 5.5. Please read it.

I don't know if it's clear from what follows, but you can get a complete Falcon030 system (monitor, CD-ROM, computer) as a trade for Gemulator 98/MagicPC and MagicMac 5!

----- Contents -------

1) Free monitor
2) Falcon030 for trade
3) Free 1x CD-ROM
4) Shipping details

====== 1 ======

FREE SC1224 12" RGB monitor to the first person who wants to ship it to him- or herself. Works fine with a Falcon or Mega/ST(e) (likely TT, too), but the case is slightly melted from one hot day in the car long ago :)

====== 2 ======

I will trade my Falcon030 14/80 by employing any of the following trade ideas:

* the latest version of Magic-PC and the English version of MagicMac 5 (which works on System 8). Instruction manuals are a must, warranty cards are desired.

* An Intel Pentium-II 233 processor and Gemulator 98 5.5 without TT ROMS (ROMs of alesser value, even Mac ROMs are acceptable).

* Gemulator 98 5.5 with TT ROMs and either: Magic-PC or MagicMac

If you agree to Gemulator 98, I will keep some of the commerical software listed below (such as the OS).

I will ship the original 4 MB SIMM that comes with the Falcon. I've removed the internal speaker, but I can re-connect it at your request.

The SCSI CD-ROM mentioned next will be included if it is not gone by the time you decide you want a great computer.

I'm open to other trading ideas; the bottom line is that I don't have room to keep the Falcon.

Commercial software included:
* Diamond Edge
* HD-Driver 4.x
* Latest versions of Geneva and NeoDesk, and compatible MiNT
* AtariWorks (with cool timelog, billing, and checkbook databases I made)
* NVDI (latest, I think)
* MultiTOS
* SpeedoGDOS
* Rainbow (art package)
* ExtenDOS
* "Language" disk (note: "System Audio Manager" (SAM) is NOT on here, my Falcon got shipped without it.)

Shareware/Freeware/PD software, unregistered:
* Everest (latest version)
* Address
* MpegDSP
* CPU MOD
* Paula
* Multi-Saver (registered, I made it!)
* CoNnect
* JPEG DSP viewer
* Speed of Light
* Shower (picture shower)
* Look'n'See
* CAB
* If I can find it, the "All Things Falcon" CD
* STiK
* STiNG

Special notes:

Two of the little rubber plungers on my keyboard wore out, so I had to move them to keys I don't use very often (keys duplicated on the number pad). All the keys work provided you have working little rubber plungers. I haven't been able to find any.

You might know, but the 14 MB RAM is actually a 16 MB SIMM. 70ns, I think.

The original internal metal casing has been removed because the 14 MB upgrade won't fit with the casing on. The metal casing will be shipped too.

====== 3 ======

If anyone wants it, they can ship themselves the single-speed, external, SCSI NEC CD-ROM drive, which comes with the SCSI to SCSI-2 cable,

otherwise, it will ship with the Falcon.

===== 4 =====

Shipping details:

Shipping from me to you can be calculated using
http://postcalc.usps.gov/. Choose to ship "a package".

My zip code is 89507. Make sure to use that in the "From" area. Choose whatever type of shipping you'd like.

Rough estimates for weights are:

Monitor weighs ~25 lbs, including box.
CD-ROM weighs ~3 lbs, including box.
Falcon weighs ~15 lbs, including box.

To pay shipping, once we agree on the shipping method, simply send a check to me for the amount made out to the "Postmaster." I can't cash it, but I'll use it at the post office to pay shipping charges. You can write a memo like, "good only for shipment to the xxxxx zip code", if you're nervous that I will use the check for my person shipping needs.

If the shipping charges are a little more or less, we'll call it even. If something was drastically under- or over-calculated, we'll talk some more.

For the Falcon trade, we will exchange phone numbers so we can call to verify the legitimacy of each other. I expect that each of us will pay to have the desired items shipped to us.

I'm just guessing, but a faster machine would probably do the trick. IOW, a Nemesis upgrade would probably allow you to use 115,200.

I have a stock Falcon and I can use 115,200 in lower res modes, as long as I'm not doing anything else at the same time. I get too many errors if I'm multitasking or running in 256- or high-color modes.

Nostrodamus phrophesised this from tross3@hamtel.tds.net to All...

Hi Terry,

t> Organization: TDSNET Internet Services(http://www.tds.net)
t>
t> I'm getting ready to go check out alta vista and deja news, but
t> perhaps someone wouldn't mind answering this question again -
t> I just went out and bought a 33.6 modem. But SERIAL.CPX won't let me
t> select a speed higher than 19.2 - what do I need to reconfigure to

You don't say which computer this is - you won't get anything more than 19200
from a standard ST.

If it's a TT or Falcon ect then make sure that you're using the right driver
from the HSModem package.

Speak to 'ya later!

If you get a MIDI file and play it through a 32kHz WAV player you get this appalling WEEEEEEEEEEE noise. This is because although both the .WAV and .MID files are digital data, the .WAV file is a sample of the sound, where the sound is digitized, whereas in a MIDI file the acutal sound is not recorded, what is recorded is control data for a MIDI playnack device. This is normally a synthesiser or a soundcard, although I believe there is now a program, that can turn an ST into a General MIDI compatible synth, though it can't do much else while it does it ......

Further to my opther post,
You could record the output of a synthesiser playing the MIDI file into something like a Falcon D2D package, or if it wasn't too long, into something like a Mastersound cartridge on the ST. If you used a low enough bandwidth (the sample would be a bit grainy) you could probably get a 3 minute pop-song into a 4Mb ST....

1195. ST -> SVGA adapter

Newsgroup: comp.sys.atari.st
Date: 1998-01-21 00:00:00 UTC
From: Claes Holmerup <claes.holmerup@mailbox.swipnet.se>
Message-ID: <885422330.352292@mn8>
Source record: 109492

Hello everybody,
I had some responses from people who want the schematics for connecting an SVGA monitor to an ST/e, as a replacement for the old broken monochrome monitor.
Because of the number of people asking about it, I believe it's simpler to post it in the newsgroup since there are probably quite a few who are interested.
So here we go:

Atari (13-pin DIN) SVGA (15-pin HD D-type)

4 (mono detect) 4,5,6,7,8,10,11
13 (ground) same pins (connect 4+13 together in the DIN plug)

9 (hor. sync) 13

11 (monochrome out) 1,2,3 (Red, Green, Blue)

12 (vert. sync) 14

That's all there is to it, so you'll only need a shielded cable with 3 leads for your adapter.
In the computer end of the adapter cable, you should have a 13-pin DIN male plug and in the other end a High-Density D-type 15-pin female.
You can only see a monochrome picture even though the SVGA monitor actually is a color monitor.
To be certain that it'll work, use an SVGA and not a VGA monitor. Some old VGA monitors can handle the frequencies, but most can't.

Good luck and best regards,

Claes

Well, I'm about 80% complete on the Community Bulletin Board area of
my site. I could always add a section relating to this.

My site might not be the best place for it, since Geocities seems to
be getting progressively slower which is making it harder to connect.

>Is it possible to convert MIDI files to WAV files?

midi files contain no sample data so you can not do a straight conversion.

One solution. Play the midi file with a normal player and sample the
output. This will require 2 machines. DO NOT attempt to do this on 1
machine as the feedback could cause some serious damage.
(1 of the machines could be a midi instrument)

Source record: 109496

Hi Folks,

As we are all no doubt aware, the most fundamental part of keeping the atari platform alive must ultimately rely on new software being released. This can't happen if a compiled language is not available for purchase.

As I understand it ...

1)
There is never going to be another release of PureC due to the licence problem.

True/False?

2)
Lattice can still be purchased but will never be developed.

True/False?

... and ...

3)
Other languages are irrelevant. Not because they are "irrelevent" but because if someone were to take the plunge and learn to program on the atari tomorrow, the only real source of help, other than assembler, is with the C language.

True/False?

==========

I'd appreciate comments which are restricted to True or False. Yeah, I know we all may have things/caveats to add but that can come later. Consider it one of those horrible psychological tests where you *must* answer True or False, and nothing else; most especially with (3). If you don't want to answer a question then don't quote it/its number.

I'll be taking stock of the answers when the relevant responses tail off.

[I have a plan] And no, I won't be pushed into revealing it!

He probably just compared the feel of MagiC with Windows. It's well known
how badly Windows wastes CPU resources. The guy should compare time consuming
applications, like zipping a large file. This gives a better idea of the
relationsship (although one still can be fooled by the results when doing it
wrong), and maybe that cools down his fanatic devotion of the 68k series.

Misunderstanding. I merely replied to your question. You do need this CPX (or
Atari's MODEM.CPX, but that is so outdated it really should go into the bin)
for configuring the serial port.

> But I've noticed something strange... when having used "Connect", the
> "serial port" CPX always returns to 9600bps (!!?!?!?!). I've set this to

This is a known bug in CoNnect. Many people (including me) hope CoNnect 98
will have this cured.

> I guess if I don't set this back to 38400 before I go online either with
> STing or "Connect" I'll only get a 9600 baud connection, right?

Correct.

This probably happened because you deleted some program in the AUTO folder that
used to be loaded before STinG. When GEMDOS scanned the AUTO folder, it found
that empty gap and used it for STinG, even though the STinG entry prior to this
operation was later on in the folder.

Could be the bug I fixed the other day. Watch my web page for an updated
MODULE.LZH which contains the fixed SERIAL.STX. It'll be there in a couple
of days.

If that doesn't help, send me a DEBUG.LOG file

> What happens now is that it goes through the login procedure, and I get
> "Connection Established" in the dialog.

This merely means the modem has connected. It says nothing on whether PPP
will succeed or not.

> However, there then follows some disk activity,

The DIAL.LOG entry is written.

> and the dialog then
> returns to "Initialising connection", which eventually times out. But,

Which is the same problem as you described in your first paragraph. Check
out the bugfix.

> I did managed to successfully connect once. I waited until the script

I can hardly believe any connection between these two things. I'd bet you
cannot do it again.

I just got a(nother) stf and encountered something I never have. It has a rev-c board and the ram is under the power supply and the roms in front of that (all I have ever seen have roms under the ps and ram horizontally under the keyboar)d. There is a 2 chip set of 1.0 installed. Next to one of the rom sockets are two pairs of pairs of pads a16 and a17. Each pair is labeled 1M and 256k. Both pairs have 1M jumped (w/ a solder blob) Now the stupid question... To install the 6 chip set that I have, are these pads the only alterations I need to make? Are there other pads to find elsewhere? On an unrelated note, if I got a set of 2.06 would they plug in? This unit appears to be an unmodified unit. I scoured the faq and could not find an answer to this. Thanks for any help.

Homepage: http://www.Wizztronics.com

---------------------------------------schnipp--------------------------------
The Good News
We are in the beginning stages of a Wizztronics TOS Computer.
Details will be posted as they become available.
Some Specs:
Microprocessor Motorola (Processor Slot)
68030 50MHz upgradeable to
68060 66MHz
Buss Bandwidth 32 Bit
* Socket for optional 68882 50MHz CO-Processor for 030 based computer
Sockets for 4 72 pin SIMM or 2 168 pin SDRAM on board supporting up to 256MB.
**Support for both EDO RAM and new SDRAM
2 High speed serial Ports (enhanced to support 56k Modems)
1 SPP/ECP/EPP Parallel Port
2 MIDI Ports
4 Expansion Slots (PCI)
Internal ATARI Compatible Cartridge Port
DSP/Audio Card upgradeable 56001 Standard
Standard SVGA Video enhanced Memory Control (upto 8MB VRAM)
SCSI and Ultra DMA IDE support
AT Style Keyboard and Serial Mouse
ATX Style foot print
100% code compatible with existing software
32 Bit Flash ROM's on board (more speed) and easy OS upgrades beyond 4.04

t>
t> I'm getting ready to go check out alta vista and deja news, but
t> perhaps someone wouldn't mind answering this question again -
t> I just went out and bought a 33.6 modem. But SERIAL.CPX won't let me
t> select a speed higher than 19.2 - what do I need to reconfigure to

You don't say which computer this is - you won't get anything more than 19200
from a standard ST.

If it's a TT or Falcon ect then make sure that you're using the right driver
from the HSModem package .

Speak to 'ya later!

Hi there,

>Is there a procedure for attaching a PC monitor to an Atari St to replace a
>broken ST monitor

You can use an SVGA monitor (some old VGA doo work, but I wouldn't bet on
it) with an adapter cable and get a monochrome display. Even though the
monitor itself is a color monitor, you can't get other than a mono display
because of the frequencies that are sent from the computer.
If you need the schematics for the adapter, please tell me and I'll mail it
ASAP.

Best regards,
Claes

Could it be that you use ICD's driver?
As I've understood things, ICD fools around in some sort of "illegal" way with the partitions and handles larger partitions in another way than other drivers. I've heard that it does work with larger partitions with Cubase Audio too, but a potential problem is that the partitions aren't AHDI compatible and therefore I trust HDDriver more - even though the partitions get smaller. I like to play it as safe as possible and don't want to risk anything - even though the risk may be small...

I have an original copy of "STAR STRUCK" the ASTROLOGER by Antic Software for sale for $15.00 which includes shipping. This program requires at least 512K of memory and will work from a hard disk. (I only tested this program on a 1 and a 4 meg ST). (Works on color and B&W)

It prints out and will save charts.
It works faster on my ST than a more expensive program does on a 33 mHz 69030 Mac.

If interested, e-mail me

Hi!

Does anybody have (or even heard of) the HOLTZ Translater
for the Atari? It is a midi-mapper extroidinare.Mr holz has
moved on to other things, like his Halo-beam midi controller.
At one time, he had a whole room of Atari's , and even convinced
Jon Anderson (of YES) to get into his Atari's and his Translater
software. If any body has this software and would be willing to
part with it(Might as well try) or knows where to get it, please
Email me! Thanx

Another question...Does anybody use DR T Omega II or the KCS?
I would like to share ideas..You just don't find this stuff on
macs or PC stuff.

Atarian

Yes, VFAT partitions can also be optimized as well as DOS compatible
partitions.

> So any chance for a english version? Now when DiamondEdge/Back is gone

No, no chance. I don't think anybody is going to translate a manual of
more than 200 pages and the texts included in the program.

Why not?

How much does it cost? I guess you use an external resource file? If
you give me a free copy I will atleast translate the program resource
file. I don't think I can manage to translate the manual but I should
atleast be able to translate the resource file. So what do you say?
Or is it realy that cryptic to use so that I need the manual?

1224. Autoboot TUS hard drive.

Newsgroup: comp.sys.atari.st
Date: 1998-01-21 00:00:00 UTC
From: bales@hol.tagada.fr
Message-ID: <6a4f6u$kn5$1@news.stortek.com>
Source record: 109662

I just got myself one of those TUS IDE boards with a fine little 170Mb 2.5" drive. At last I have a HD on my STE, and internal, which is really very, very neat.

the installation is pretty easy, plug into the 68000 socket and cut a pin, solder 4 little wires, drill a hole or two to. The explanations in the manual are very clear, but I wouldn't suggest doing it if you are an absolute non-tech person.

Anyway, at the moment, I still have boot up with AHDI 6 on a floppy. The manual states that TOS 2.06 can autoboot on an IDE drive, but 1.62 needs to boot from a floppy. What about the TOS 2.05 version I have ? It doesn't seem to want to autoboot on the IDE drive, athough I have set the autoboot the way it should be. I'm sure there aren't too many 2.05 users with IDE drives, but if anybody could confirm that this is normal behaviour, I would be grateful. Is there another way to autoboot the hard drive without a floppy ?

Another question: I'm using fontgdos at the moment. I know it's old, but it's free and I'm not willing to invest in speedo as I don't have that much use for it. Right now it seems to save and load it's assign.sys and extend.sys files from the floppy, and I can't seem to set it to read them from the HD. Does anyone know how I can fix this ?

Cheers,
Nick

I tried to buy one of these Noboxe things. After many MONTHS, I finally got in touch with the guy who markets them: Peter Buick. He told me that he had just ordered some more PC boards and would call me back in two weeks to take my order.

That was in November and I am still waiting - well I am not really waiting because, in the meantime, I managed to trace a used Steinberg SMP 24 which has FOUR more OUTs *plus* SMPTE synch. and it also works very much better with Cubase.

Hope you have some luck too.

John.

Hi,

>Is there a procedure for attaching a PC monitor to an Atari St to replace a
>broken ST monitor?

yes, it's easy. You just have to connect the correct wires (ground,
horizontal and vertical synchro and the monochrome video from Shifter pass
through three resistors to R, G and B signals of VGA). Sorry I don't have
the schematics handy, perhaps somebody else will put it here. If not, reply
me in PM.

Ehhh... New processor, new videosubsystem, new sound subsystem, DSP,
IDE. Well,
the MFP and keyboard are still the same one.

So there are more then a few changes. Add to that the higher clock rate,
and
there you have some reasons.

Hans

Well, it's probably pretty difficult for even a pretty beefy PII to emulate
68030 alone, and DSP's are heavily optimised signal processing chips that are
made to run faster than software can perform, so I can't reasonably imagine a
software DSP running on a pentium AND emulating an 030 at the same time, let
alone the other stuff!

I guess an emulator can decently emulate a pretty fast TOS machine running in
SVGA resolutions (MagicPC ?), but it probably will not be possible to emulate
a complete Falcon before a while.

the second solution sounds terrible but if you have any information about
the frontier or merpet ram extensions let me know on where I could get one.

Any information is greatly appreciated. 2 or 4 megs would really give me
the power I need without running into any problems

I found that the latest version can handle NOS too. Sadly none of
these things can't be used by me. My ISP doesn't support SOUP and
UUCP. Furthermore a few months ago they've installed a new newsserver
which doesn't support the NEWNEWS command so the current NOS version
can't be used either. Until a week ago I was using the public
newsserver of Stuttgart but they also get a new server now which elas
doesn't support NEWNEWS.

Thanks anyway

Does
> anyone know how I can fix this ?

I think it has to do with the fact that you re booting from floppy. If you manage to boot from the harddrive it usually loads assign.sys & CO from drive C...

Good luck!

You've not mentioned the POPwatch problem to me :(
If it's the one I think it is, then it's caused by your signature file not ending in a CRLF. Edit your signature file and add a CRLF at the end.
That should stop POPwatch hanging. This will be fixed in the next release of POPwatch.

Hi Martin

If you're interested, I can send you the latest beta of NEWSwatch.
It handles retrieval of articles by article number now, as well as NEWNEWS.
Thus you can use either method.

The latest NEWSwatch supports individual message retrieval, for those news servers which don't support the NEWNEWS command, and is NOS/OASIS2 compatible. That's what I'm using for NOS-compatible message retrieval from my news server which doesn't support NEWNEWS.

1251. Possible UK Atari Show - update

Newsgroup: comp.sys.atari.st
Date: 1998-01-22 00:00:00 UTC
From: mike@ataricomputing.com
Message-ID: <6a7nkr$20l$1@chlorine.compulink.co.uk>
Source record: 109389

Hi all

As promised here's the first update on our plans for the proposed UK Atari Shows/s.

Unfortunately, I have only received about 15 responses so far, and that is a combined total from postings on usenet, CIX and NeST :-((((

Anyway, from these 15 responses (many thanks BTW!), it appears that about two-thirds of people prefer Birmingham. London is running quite far behind, with some people saying that they would travel to Birmingham anyway from the South!

Most people are going to travel by car so this means car parking space near the venues is required.

Preferred time for the Show/s appears to be in July/August.

As for attractions, most people are in favour of demos and help areas wehre you can be shown how to use comms, dtp and music etc programs.

Sales stands and a swap shop area are also in favour!

There have been some other good suggestions, and these are being actively considered.

Many people have said that the last few UK Atari Shows have not really been very exciting because they just consisted of sales stands. We are therefore planning on our shows to have a lot more demos, hands-on tutorials, and maybe even a few seminars! We are also planning on having stands set aside for you to register your favourite Shareware programs with the UK-based support schemes.

However, we REALLY need a bit more initial support for our plans, 15 responses is not really a good base to plan on. If you want to come to an UK Atari show that caters for you, then PLEASE do get in touch.

Finally, we will be putting a similar questionaire to the one posted below in the next issue of Atari Computing.

Thank you for your support :-))

Anyway, I'd like to get some ideas and thoughts coming back to me, so I'll ask a few questions and ask everyone that is interested to comment here, but please send actual question responses to me via email to avoid cluttering up the group.

1) When is your preferred weekend & month; June/July/Aug/Sept/Oct/Nov
(please give exact dates if possible

2) Preferred day; Saturday/Sunday

3) Preferred location; Birmingham/London

4) Method of transport; Car/Bus/Train

5) What sort of admission price would you pay? (3.00/4.00/5.00 ukp)

6) What would you like to see at the Show in order of preference?
(demos/tutorials/sales stands/anything else?

7) What is your main interest; DTP/Music/graphics/?

8) Where will you be travelling from?

9) Further ideas/comments

Many thanks to all that respond. I'll post a summary of what is sent to me
in due course.

Basically, unless we do get a reasonable level of prior support AC will be
unable to organise an event, so this is everyone's chance to ensure that
there will be a show this year in the UK!

No Richard, I have not. Would use a PC keyboard my self if I had a good
PC keyboard interface for the Atari (i.e. no driver software needed).

Hans

Actually, finding a PC bus mouse nowadays is just about as hard as finding an
Atari mouse. Maybe worse even, because there are no more "286 dealers",
whereas there still are some Atari dealers around.

>Thanks for that posting Hans, My Atari is crying out for a new mouse.
>Do you have any info for connecting a PC keyboard to the Atari?

There are a few commercial adapters for this, but it's probably more than just
a bit rewiring.

Try getting hold of a Mega ST/MegaSTE/TT Keyboard.

Cheers,

Nick.

> you give me a free copy I will atleast translate the program resource
> file. I don't think I can manage to translate the manual but I should
> atleast be able to translate the resource file. So what do you say?
> Or is it realy that cryptic to use so that I need the manual?

It's not cryptic but because there are so many functions that the user
has to be informed about and because the manual explains data structures
on floppies and hard disks and how to analyze and repair data etc. its
absolutely necessary the user has access to this information. There will
definititely be no foreign language version of DISKUS without a properly
translated manual. Other have asked this before but after they saw the
volume of the things to translate they immediately quit. I had told them
before they would quit, they didn't believe me :).

: so he knows quite alot about it. If he manages to do it I guess CAB
: will have a hard time in the future if it does't support Java script.

Well, this will be interesting to see. CAB might do well anyway
though. I know I have Java and javascript turned off on my browser at
work as I find them both too irritating. Java crashes the browser
about half of the time (honestly, it is very unstable, and I have a
pretty robust machine), and javascript, while reasonably solid, is
used primarily to annoying ends. Who needs all this cluttering junk.
Animated GIFs and flashing text are bad enough! But that is just me.
I know some people think all of that is what the web is about.

: We just have to wait and see.

I very much like what I see of Adamas so far, and more power to the
programmer if he can bring javascript or Java to our platform. But
some people might prefer CAB even then. And, meanwhile, who knows
what features will be added to CAB (probably not Java, but who knows
what else, or what is in the future for Java on the other platforms).

AFAIR same thing with SCSI-Tools (where to update it BTW). IIRC the doc
reports it's due to a gemdos bug. The cluster 0x4000 is then marked as
bad for compatibility reasons.

It's probably a 'feature' of your news server. I'd like to say I'm horrified at this censorship, but with a few modifications, I think it would be a great feature. I don't think the percentage should have to be 51% new text, but it should at least be somewhere around 20-25%.

What I'm more horrifed about is that NEWSie doesn't tell you when news or mail does not get posted. That seems like one of the first things you'd implement in a mail/news front end. That makes it almost unuseable for me, because I don't have time to check the log everytime I post a mail or messag

a> STinG 1.12, and having problems. Whenever I enter a URL, it makes the
a> connection OK, but then always reports "error- file not found". It
a> must be something stupid I have disturbed, but I can't fathom it out.
a> Any ideas?

That happens to me on certain sites, but I've always attributed it to
something wrong with the site, or at least an incompatibility with the site
and CAB, since most sites work fine.

If you're connecting to the site, I guess your CAB.OVL is working, but that
would be one thing that would cause that error, if it's not using CAB.OVL or
if you have the wrong one in your modules folder.

DO NOT use the CAB.OVL that comes with CAB 2.5, as it won't work with STinG.
Use it only if you're going to use IConnect. (I use Stoop to automatically
copy the correct one for each setup.)

Make sure you have all the latest STinG files and you're using the latest
CAB.OVL in the modules folder. And, of course, make sure CAB is configured
to find that modules folder.

Someone emailed this to me, but for some reason their address didn't make it,
so I have no way to email them back.

To answer the question, STING.INF should be in the AUTO folder, and it should
simply contain the path to your STING folder that has DEFAULT.CFG, ROUTE.TAB
and all your STX modules.

Here's what my STING.INF looks like:

D:\STING\

If you still get the error, try adding a CR/LF to the end of the path (I'm
not sure if STinG requires that or not).

1267. Background DMA on Falcon

Newsgroup: comp.sys.atari.st
Date: 1998-01-22 00:00:00 UTC
From: outrider@anv.net
Message-ID: <72_outrider@anv.net>
Source record: 109405

I've been having problems with sluggish transfers and background downloads erroring out lately. I was used to getting transfers consistantly well over 3200 cps and had as many as 10 background downloads all going at the same time, with no problems. But lately, my transfers were closer to 2200 cps and having anymore than one or two background downloads going at the same time would cause at least some of them to error out, sometimes even just having one going would not make it.

Well, after pulling my hair out, trying to figure out what I did to cause this, assuming it wasn't hardware related, I finally figured out that it was background DMA, even though I don't even use the SCSI port when online. I turned off background DMA, just on a whim, and immediately my transfer rates shot way back up and I can now download multiple files again in the backgroun

Just something to consider, if you're having the same problem. I guess a stock Falcon is too slow for efficient background DMA.

Isn't one of the reasons Atari failed that they tried to go too many directions at once. What the world needs is a good upgradeable TOS machine with all of the good ideas rolled into one - plus some of the good ideas from the Mac platform (there may even be a good idea or two on the DOS boxes)

What the world doesn't need is a Hades, Medusa, TT60, or a few other TOS machines all in competition with each other. However from what I've seen in the past Wizztronics may have a chance - if only a very slight one.

Time will tell, but not much !

Insert very large, slightly sardonic, evil grin at this juncture.

I've had good luck with it using MagiC 5.11 and STinG. On a password protected site I couldn't access before, I can now access, albeit not without a few problems. I almost always get an error in CAB's status line, and it's quite often a different error. I've written down error numbers 42, 13, 14, 24, 7, 17 and 9 so far. Often, I get a blank page, and when reloading the page, sometimes it works, sometimes it crashes. But unlike previous versions of CAB.OVL, at least I can use the username/password dialogs over and over and over again. Before, it crashed after the third use.

So things are definitely looking up, at least as far as authorization is concerned.

Well, perhaps it is MagiC that is inefficient. The point is, background DMA slows down at least MY Falcon, with HDDriver 7.04 and MagiC 5.11, dramatically, and that's when not even using the SCSI port (I only use my IDE drive when online).

I finally believe (I've been pointed out) that in my case it's "only"
the (in)famous DMA/SCSI problem on Falcons. I thought that I have had
sorted it out but it seems to appear again and more frequently with
Magic :-(

Nothing to do though with the Newsie problem.

As a guide you are supposed to post articles which contain more text
than old, it is to encourage people to cut posts properly, it is a
reasonable idea but it only encourages people to do what you do and
munge the postings even more. As a *rule* it is pretty useless,
especially for short posts, I'm not sure if it is caused by Newsie or
your news server, if it is Newsie, it chooses a pretty odd time to tell
you the problem.

1280. Falcon Package 4 Sale

Newsgroup: comp.sys.atari.st
Date: 1998-01-22 00:00:00 UTC
From: "Daniel W. McAndrew" <mcandrdw@toad.net>
Message-ID: <34c7bbb1.0@news6.kcdata.com>
Source record: 109418

**** Warning **** Long Post ****

I would like to hear what you may consider a fair price,
rather than my asking a desired price up front.

The overall benefit here is that everything is known to work,
and it's likely you'd never get such a complete package
for any system even currently on the market.

All for one low price.

Everything is in excellent working condition.

There are a total of 7 boxes. Two (45 lb each) hold the original
documentation, 1 box holds the modem, Syquest 270 MB HD
and power adapters, 2 boxes (10 & 4 lb each) hold the original
disk media, multisynch monitor (28 lb) and the Falcon (14 lb)
itself. I give the weights should you want to determine S&H.

HARDWARE

Falcon with maximum memory (16Mbytes), original 80 Mbyte hard drive,
15" color multisynch monitor, 270 Mbyte Syquest removable external Hard
drive with 2
270Mbyte cartridges and a 14.4 kbps SupraFaxmodem v.32 bis. Trakball, too.

(If interested in the whole package, please contact me at the following:
mcandrdw@nospam.net substitute toad for nospam, please. Thank you.)

SOFTWARE

Games

Chessmaster 2000

Programming

EsTeem Pilot v2.0
Devpac ST 2.0 (assembler)
ST Assembly books & source code
GFA BASIC v3.5
Prospero Fortran
Mark William's C

VJHC is what the name says, Header Compression invented by Van Jacobson.
It compresses the usually 40 bytes large headers to typically 3 to 6 bytes.
It merely speeds up data traffic, but does not effect at all the link setup.

This is a well-known bug in CoNnect. Since CoNnect has reinvented the wheel
setting the interface parameters itself, it tries to save the parameters and
restores them later on. However this code in CoNnect is buggy. It does not
restore the old baudrate, but 9600 bps.

c> US and how much.

AFAIK, 2.5 is the latest version available in the U.S. (It's up to at least
2.7 in Germany.)

c> I've seen some of the alternative desktops, are there any available in
c> English (besides NeoDesk) like Thing or Jinnee or Gemini, and again
c> where can I get it in the US and how much.

I just bought Ease from SystemsForTomorrow.com and like it very much. Some
prefer Thing, but I believe you have to pay for it overseas (crippled
shareware). Jihnee (or however you spell it) is supposed to be awesome, but
I don't believe it's available in the U.S.

I believe the answer is true to all of the above. The only thing I would like to add is that there is also available the Free Software Federation based products including GCC, Sozobon C, and Sozobon X.

I am not a programmer and can not say how useful these other C variants are, but at least they have the advantage of being updatable.

Source record: 109512

I had a ST 1040 with a weak drive motor, it would work on some disks and not on others. I know it was the drive and not the disk because they worked in my external drive. I was able to make my disks work by prying open the side of the disk and removing the mylar spring that is adheared between the case and the felt (I used a medical hemostat, but very skinny needle nose plires should work). This reduced friction just enough to allow the drive to spin up to 300rpm and read the disk.

Hi all,

I'm still using my ST512 as a sequencer. It does a fine job at it for what I need. I'm using Hybrid Arts old EasyTrak +. The problem is that it won't store bulk dump storage data for my ROLAND sond module an drum maching. The sound module is not really a problem but the drum machine is. I NEED a Editor librarian for it. It's a ROLAND R8 Mkii. Is there anything out there that will handle ROLAND's exclusive messaging? I tried writing a Q and D program in GFA basic and had no success. Is there anything out there? It's either this or I'll have to outfit my P.C. with a MIDI attachment and invest big buck in a package that I'll only use for back ups. Thanks for any help!

Thanks,

Tom

Bonjour Pascal,

Well, there is a lot of variables in play here. With NEWSie v84 I did have corruption problems originally with my MultiTOS/MiNT setup until I switched to the MiNT v1.14.6 and changed my mint.cfg file. I'm not a MiNTNet'er so this took me awhile to sort it out. Now, NEWSie doesn't do anything strange all all while using MAIL,NG,FTP, or URL. I can disconnect at anytime without any problems. I tried turning the modem off at odd times, picking up the phone receiver, etc., anything to break the connection.

That was using MultiTOS/MiNT/STiK. I was able to duplicate some problems using single TOS4.04/STinG1.12/NEWSie84. In the middle of reading NG messages, I broke the connection by picking up the phone. I then couldn't quit NEWSie until I brought up the control panel and deactivated STinG. No files lost/rewritten. The "worst" I could do was to get online and start a reply to e-mail, then let the connection timeout (I have a flat rate :)) This caused 4 bombs on mein Falcon. I had to re-boot, but no files were corrupted. Mailtest.txt was still there, but didn't have my reply notes as I didn't save'em. Again, I use NEWSie with STiK/STiNG and really don't have any problems. It's only under "extreme" circumstances that these "bugs?" occur.

I don't use Geneva or MagiC, so I can't comment other than to say that the conf's can be a mess to setup. My experiences with MiNT really opened my eyes to that <g>. I'm just glad there is a STiK/STiNG/NEWSie/POPWatch/MiNT to keep me online :))) MiNT v1.14.6 is a very powerful prg, so I'll never really understand it. It sure keeps MultiTOS alive for me. I'm still

trying to get STinG to run under MultiTOS/MiNT when I have time. So far,
I can connect and get ping to work, but anything that involves TCP(?), such
as Resolve or Tracer Route, causes the famous pid BUS ERROR. I'll keep
trying. I use single TOS4.04/STinGppp/CABv2.5 with JPS.Net for surf'in
the Net because it's so darn FaST.

CU,

Charles 14meg Falcon/Nemesis/etc.

Well, I opened it up, and it is indeed a 360, one head only.
Amazing that they would even make such a useless drive. The
machine seems kind of cool otherwise, but this kills it until
I find the time to install another drive. I do have a spare Teac
fd-235 hf, which I believe can be made to work, when I get time.

Source record: 109517

Do you want to share ONE Internet connection with the rest in your Family or office?
SYGATE is the software to do that.

With features like Dial-On-Demand, it will connect your LAN to the ISP if
and only if there is access from your LAN to the Internet.

It is easier to use than proxy servers in that it doesn't require the setup in
each and everyone of your applications running on your PCs.

Free download from www.sygate.com

With one phone line, one modem and one ISP account, everyone in your office
or family can access the Internet from their own machine.

It works for Analog, ISDN modem and Cable modems.

Borland developed Turbo C for the Atari. When it was sold to Pure
Software it became pure C. Pure C is _not_ a C++ compiler. It
doesn't even understand C++ comments.

The MSX (no typo) instructions of the Pentium have almost nothing to do with DSP instructions. Signal processors have a special features like hardware circular buffers, bit reversed adressing (needed for FFT) and lookup tables for much used functions. The pentium (with or without MSX instructions) doesn't even come close.

Well, at the time, the mere fact of using a floppy drive instead of cassette
tapes was quite impressive. The amstrad I had before had 180K disks, which
were, I admit, 3 times the total RAM of the machine (you could put 4
full blown commercial games on one disk).

As for the Teac, it can probably be used. Check out Hallvard Tangeraas' text
file for details (you'll find it in the Quick FAQ).

Cheers,

Nick.

I paid it approx UKP100 (interface+drive), shipping from the UK to France
included. The interface on it's own is around UKP60, and you can use just
about any IDE 2.5" drive. You can probably find 2nd hand ones from someone
with a laptop who wants to upgrade his drive.

The drive itself is pretty silent, and these laptop drives have power saving
features so they auto-shutdown after a while.

>just because of this.

Well, I guess it's the case. But I don't think I'll upgrade my TOS just
because of this. Booting on floppy is a minor inconvenience. It just loads
AUTO programs from the floppy. ACC/CPX and everything else is on the HD.

>By the way, 2.05 on an STe???? Have you taken them from a Mega-STE or
>something?
>

Yes, I bought them 2nd hand from a guy who had probably upgraded his MegaSTE
to 2.06. They have stickers with 'Mega STE TOS - France (c)Atari' written on
them, and they are EPROMS.

>I don't know about the legality of this, but if they're EPROM chips,

There's a text file that deals with putting a 2 chip TOS on a 6 chip machine.
A link to it can be found in the Quick FAQ (see my .sig).

Are you sure that your 2 chip TOS is 1.0 ? I was always quite sure that 1.0
and 1.2 were 6 chips only, 1.4 existed in both, and all following versions
were on 2 chips. So that should be 1.4 in your machine.

Cheers,

Nick.

1302. when posting with Newsie-

Newsgroup: comp.sys.atari.st
Date: 1998-01-22 00:00:00 UTC
From: claytone@aa.net
Message-ID: <885460721.938094@slave2.aa.net>
Source record: 109525

I've been frustrated many times when I THOUGHT I posted something to the NG, only to find it never made it. At someone's suggestion, I looked at my LOG file to see if it was considered by Newsie to have been posted or not. Here's what I found after my latest posting:

```
-> post
340 Ok
441 Article not posted -- more included text than new text
```

Now, who made this law about "more included text than new text", and how can I turn it off? ;-) Sure enough, there was definately more included text (from the posting I was following up on) than new text that I was including. Soooo, I tried the same posting, only this time I took the quote signs off of most of the previuos posting so most of the text would "appear" new. This is the result from the same LOG file:

```
-> post
340 Ok
```

I checked, and it went thru fine. Can someone explain what's going on? Thanks!

No matter what you say there is a crazy guy who will try to do it. First
he will have a go on Java script and later Java VM. It's the guy who
is coding on Adamas. Apparently he works with Java stuff and Java VM
so he knows quite alot about it. If he manages to do it I guess CAB
will have a hard time in the future if it does't support Java script.

We just have to wait and see.

> If that doesn't help, send me a DEBUG.LOG file

Thanks, but I've finally got it working now. I think it may be the embarassing problem of not having STiNG activated. I took a look in the "Internals" CPX and saw that the Active box wasn't selected. Putting this on made it work. On someone else's suggestion I added a route to the DNS server to route.tab - I don't know if this helped or not.

Anyway

<blush>

Thanks for the help

Hi, Terry

Can I pick your brains for a minute? I have recently upgraded my Falcon, and am now running under MagiC instead of TOS 4.04. I used to use CAB 2.0 with STiK, which worked fine, but now I am using CAB 2.5 with STinG 1.12, and having problems. Whenever I enter a URL, it makes the connection OK, but then always reports "error- file not found". It must be something stupid I have disturbed, but I can't fathom it out. Any ideas?

Regards, Alan.

I expect it to be worse. It's not unusual that a medium sized Java
application requires more than 10 MBytes of memory. With Java you never
exactly know, of course, how much memory is already sufficient. This is
because of the integrated garbage collection.

Terry May wrote:
>
> Are there any programs for converting progressive JPEGs to normal JPEGs?

You need special software to perform this task losslessly.
Loading and resaving a JPEG image using a general p-JPEG capable graphics
editor will cause an information loss and image quality degradation!

A special tool to perform lossless JPEG conversion is the 'jpegtran'
utility from the free Independent JPEG Group software which can be found
anywhere on the net. A simple Web interface for quick online conversion
can be found here: http://www.reporter.de/jpeg-lab.html (works properly
at least with Netscape).

> Are there any programs other than CAB and 1st Guide for viewing progressive
> JPEGs?

All decent graphics programs which support JPEG at all should also
support p-JPEG nowadays. See the JPEG FAQ at http://www.faqs.org/faqs/jpeg-faq/
(part 2 subject 16) for a list of up-to-date programs.

Regards,
Guido

<snip>

Well, we know all this already... I'm afraid it's not much more advanced than the Phenix, and still way behind the Milan.

I wouldn't hold my breath yet really (unless if I wanted to die from suffocation). It takes quite a while for Apple to come up with a new Mac, or Acorn to design a new RiscPC. I really can't imagine how a small 4 person company could design a whole new machine in less than a few years.

Just a thought: Why don't Falke Verlag, Centek and Wizztronics get in touch with each other and try to cooperate? I mean they are all pretty far away from each other, but it shouldn't be too difficult to share various tasks on the net. I'm not at all sure that there is room in the market for 3 very similar TOS clones.

Do they even know that there are other people working on a similar project ?

Cheers,

Nick.

I'm using ShutDown 1.6 with MagiC 5.11. If I put STinG's SHUTDOWN.PRG in my STOP folder, ShutDown 1.6 says it's executing the STOP folder, but it just sits there and nothing happens. Is this a problem with ShutDown 1.6 or with STinG's SHUTDOWN?

Also, I'm getting exception errors fairly often when trying to disconnect from the dialer. I can run the dialer again and disconnect, but it always takes longer than normal to actually disconnect the modem.

u> affected at all. What software did you use to check the transfer
u> speed?

I'm going by CAB's status line, and also performance with CAB's background download module. But heck, I don't need to look at the CPS rates to know there's a difference. It's very dramatic. Not only are my transfers faster, but there seems to be far less time where CAB waits for data.

It doesn't sound logical to me, either, but there's NO doubt that my online performance has improved quite a bit since turning off background DMA. And the only other programs I'm running in parallel at the time (aside from when I'm background downloading) are Ease and MenuInfo, though I do have some TSRs and ACCs also. However, before I tried disabling background DMA, I tried running on a very clean system and that didn't seem to help, so I don't think my TSRs or ACCs are causing any sluggishness.

And like I said, I'm not even using DMA when online. I only use my internal IDE drive while online. I run in high color while online, and my Falcon does not like to do SCSI while in high color, so I make sure not to use my SCSI drive. (Hmmm...that could be a factor, too, eh?)

Aloha from Hawaii!

I am having problems with connecting with STING...I've read all
your docs and config file set up etc....and all the way up to dial up and
connection with host works fine. But as soon as it attempts to
Link...it says unable to negotiate or something like that.

Also have been noticing that when STING is in operation.....that
my Atari Falcon mouse pointer get's locked up/frozen and unable to move.
Have only noticed this since I Loaded CAB/STinG/Mousie etc.
Have only noticed this since I Loaded CAB/STinG/Mousie etc.

Is this an ongoing problem/bug? Or do I have some kind of virus
(heaven forbid).

I am just about ready to give up.

Aloha again.

Vern

This freezing of my mouse really frightens me...I have notice
whenever I have to deal with the files, such as save, open files
from either universal item selector, or such.

Help please...should I just dump STING/CAB/or whatever.???

Link? What do you mean? Do you mean when you attempt to log onto an area
with CAB? Make sure a STinG-compatible CAB.OVL is in CAB's MODULES folder.

m> Also have been noticing that when STING is in operation.....that

m> Is the CAB_JPEG.OVL file still needed with the latest versions of
m> CAB.OVL??? Does CAB use both?

Yes, they do two different things. CAB_JPEG.OVL is simply for loading JPEGs, and it's needed if you ever want to see any JPEGs online. CAB.OVL is needed for communicating with your PPP/SLIP software. Otherwise, CAB is basically just an HTML browser.

That's a (questionable IMHO) feature of the news server. You can't do anything about it apart from begging your ISP to stop it doing this. It's no good, as this guy experienced, it should instead be performed by the news reader (poster) so that the user sees the problem immediately and can cut away more quoted text.

FWIW
Just a though for those experiencing problems with Newsie doing "funny"
things to files. Check the fast ram flags for Newsie with Proflags or
like program. If the fast ram flags are "on" - try turning them off. I
only started experiencing the kind of problems others have been
reporting with Newsie when I made it run in and use fast ram on my TT. Before I
had it set to only run in ST ram. This is with Newsie 0.84/MagiC 4.0/
Neodesk (release 005)/HD 5/HS_Modem 7/ and the latest versions of STinG.

I've left this switched on, it doesn't seem to make any difference to other
comms progs.

h> The "delay" parameter is set at 60 (I have no idea what this actually
h> delays though).
Me neither! (g)

h> -"sting port setup CPX" : I'm a bit confused about this module. I've
I think that you only need this module if you've a local network. Disable it.

h> -"sting protocols CPX" : I don't know which values I should insert here
Ditto.

h> -"serial port CPX" : this is ofcourse set to 38400 bps/8 bit/no
h> parity/ 1 stop bit and RTS/CTS flow control.
h> in the "driver" part of the CPX, should I set "DTR" on or off?
h> The buffer sizes are set to 256/256.
These values are picked up from those set in HSModem. Leave DTR on, it's the
default for TOS according to HSmodem.

Fill in entries in the default.cfg file as best you can, also read the docs
for the CAB.OVL, CAB picks up some entries that you will need to add to the
cfg file which are otherwise unused by STinG.

Log in with a term. prog and make a note of the questions asked for the basis
of a dial.scr?

HTH!

There are several case styles for the Link2, the one that is buried away in my Tower case has a transparent case, the one that accompanies my other ST has a grey case with "The Link 2" in a nice script. In both cases there is a red LED to indicate that it is powered.

Hi my name is Nick and I just happened to come across this newsnet not
knowing that the Atari was still alive and doing so well. The reason for
this note is as you all know Atari in the US has just about died and at
one time I was an avid inthusiust for Atari products. Any way I have a
bunch of Atari parts, monitors, hard drive boards, mouses , joysticks
and a ton of software. If there is something that I have that you may
need write me an email at vniko@ibm.net. have a nice day.....
Nick

1339. ST to Portfolio: HELP!!!

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: "Oliver S. DePeyer" <saspeyer@reading.ac.uk>

Source record: 109362
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.handhelds

I have an Atari Portfolio and an Atari MegaSTE. I have a parallel
interface for my Portfolio. I want to transfer files to and from the
Portfolio linked to my ST via the Parallel interface.
I can't get it to work.
HELP!!!!!!!!!!

OK, this is the story so far:
I had the German package PORTLINK (now sold with cable by the Portfolio
Club UK, under the badge ST LINK), but my cable seems to be broken.
So, number one, can somebody PLEASE tell me how to make a replacement
PORTLINK cable, or tell me where I could beg/borrow/steal a new one?

I have also got the (Austrian) program STFOLIO. This has a diagram of how
to make your own cable for use with the program. BUT the cable requires an
I.C, 74HC125 (you CAN'T substitute the more common 74LH125). I have been
searching for most of the week and NONE of the major U.K I.C suppliers
sell the 74HC125. SO, point number two, are there more recent versions of
STFOLIO that don't require the 74HC125 I.C? The version I have is dated
1990. If I really need this damned chip, then can somebody PLEASE give me
one or tell me where I can order one? Where could I beg/borrow/steal a new
STFOLIO cable?

Point number 3, is there some other program I can use for ST-Portfolio
parallel transfer, and if so, where can i get it, and what about the
cable?

PLEASE HELP!!!!!!!!!!!!!
Email correspondance preferred... my email address is

No doubt it would.

> But maybe someone will but unfortunatly I kind of doubt it.

Well, I will at least work on the Unix/X version, dunno if it's worth to
make a 'native' Atari port. It would be nice, of course, but considering
typical Atari developments and other porting projects I suspect it
wouldn't be really appreciated in the Atari world, unfortunately,
so the motivation is humble.

Hi,

I'm a new TT030 owner:

Is there is an English version of CAB 2.6 and where can I get it in the US and how much.

I've seen some of the alternative desktops, are there any available in English (besides NeoDesk) like Thing or Jinnee or Gemini, and again where can I get it in the US and how much.

Is there any drivers out there to set up the LocalTalk port with TCP/IP so I can hook it up to a LocalTalk to Ethernet bridge to I can have the TT030 on my PC TCP/IP network.

Last but not least, I heard the TT030 can have up to 256MB of memory, which boards support this and where can I buy one.

Thanks to all for any help you can offer.

Hi Tim,

I have a friend who has a Hotz Box and software, he's willing to sell it,
but together and not seperate, its a VERY cool device, too bad Atari didn't
maintain its music division.

The latest English translation is 2.5. I've been told that it will be some time before another version gets translated, that System Solutions is planning to skip a release or something. But that is uncomfirmed rumor at this point. Anyway, CAB 2.5 lists for $49.99 from Systems For Tomorrow, ChroMagic, ATY, and probably other dealers as well (ATY just suffered a loss and it might be nice to purchase from them to help them get back on their feet, by the way, but that is another thread). E-mail me if you need contact information for any of these listed dealers.

: I've seen some of the alternative desktops, are there any available in
: English (besides NeoDesk) like Thing or Jinnee or Gemini, and again
: where can I get it in the US and how much.

Thing and Gemini both have English versions, I don't think Jinnee has been translated yet. Jinnee is commercial software from ASH (same as CAB), but I don't think it has been imported to the US yet. Thing is shareware and can be downloaded from the Interactive web site at http://www.cix.co.uk/~inactive/. Gemini was shareware, I don't know its current status, or where the latest copy can be downloaded from.

: Is there any drivers out there to set up the LocalTalk port with TCP/IP so I
: can hook it up to a LocalTalk to Ethernet bridge to I can have the TT030 on my
: PC TCP/IP network.

Talk to Peter Rottengatter ;-) STiNG is supposed to support this some day, but doesn't as of the latest release. There is a commercial product called Universal Network that, I think, will do this. It is sold by A & D Software. I will have to dig for the contact information, but if you e-mail me asking for it I can get it.

: Last but not least, I heard the TT030 can have up to 256MB of memory, which
: boards support this and where can I buy one.

I don't know the answer to this at all, but one of the above listed dealers would probably be happy to help you on it.

Well, that's the best help I could be. Surely others in this newsgroup will be able to enlighten us both further.

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of Linux, a UNIX-like operating system
distributed under the terms of the Free Software Foundation's GNU
General Public License, to computers using the Motorola 68020, 68030,
68040 and 68060 CPUs. Current releases support Amiga, Atari and
Motorola VME systems (MVME 147, 162, 166 and 167); porting efforts are
underway to the Apple Macintosh and various 680x0-based workstations
(at present, the HP 9000/300 series, HP/Apollo Domain series, NeXT and
Sun 3 series). Efforts to port Linux/m68k to other 680x0-based
systems are also encouraged.

The current, complete FAQ is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (Master site, The Netherlands)
http://www.clark.net/pub/lawrencc/linux/faq/faq.html (USA)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html (Germany)
http://amiga.nvg.org/linux/mirrors/lawrencc/faq/faq.html (Norway)
http://www.uk.linux-m68k.org/faq/faq.html (United Kingdom)
http://www.se.linux-m68k.org/faq/faq.html (Sweden)

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/
ftp://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/
ftp://tsx-11.mit.edu/pub/linux/680x0/FAQ/ (and all tsx-11 mirrors)

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en francais. On peut le retrouver

1348. Info wanted on 1040STf

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <885522442@acpu.com>
Source record: 109433

Hello. You wrote:
-> I have the opportunity to buy a STf for $60. That includes only
-> monitor, machine, and mouse. No operating system (assuming it is not in ROM).
-> Does it worth it? What are the specs of this machine? What can I do with
-> it?

The 1040STf has an operating system in ROM called TOS. Originally they were shipped with TOS v1.0 and are upgradeable to an improved TOS v1.4 or you can buy Magic v5.0 or whatever is available to replace TOS with a multitasking environment.

Despite the age of the machine (about ten to twelve years old now) you can still do quite a bit with them. They include MIDI (musical instrument data interface), to connect to a synthesizer to create music, desktop publishing (although not very fast), even connect to the internet with CAB v2.6 and STiNG (internet browser and dialer).

The machine utilizes the Motorola 68000 16 bit processor running at 8 mHz. That may not sound fast but it is very efficient compared to the IBM and clone processors. With certain shareware software accellerators they'll appear to run as fast as an IBM 386 33 mHz.

It has a DMA (direct memory access) port to connect a hard drive but you'll need a host adapter for that which runs about $100. U.S. or so. You need a hard drive to use it on the internet. The screen resolutions are 320 X 200 with 16 colors low, 640 X 200 with 4 colors medium, and 640 X 400 with two colors in high resolution.

The memory can be upgraded to 4 megs. It includes ports for a modem, parallel printer and the internal floppy drive is most likely 720k.

It makes a decent game machine as well as for productivity. I used mine to make printed circuit transparencies to fabricate my own boards. I also had a hand scanner to digitize images I drew by hand into my computer to place on those boards.

I can go on and on but my time is limited. Good luck with your choice.

Later,
James

There's also the JPEG v6 software that can handle/convert progressive
JPEGs. IIRC Tommy Anderson compiled it for the ST/TT/Falcon and it should
be available on his website. His home page is:

http://home3.inet.tele.dk/tommya/

When you get there, you'll have to have a quick look around since I don't
know the exact page it's on.

Yes, it would be tricky as all companies have problems at times, and sometimes honest mistakes are made. However bad apples can be pinpointed and honest companies will do their best to correct a negative situation.

A simple rating system similar to the STAR system for hotels is all that is necessary. Thus if a company sees their rating low, they may try harder to get a better rating. Worldwide I think their is still enough Ataris to make some profit.

***** Excellent prompt service, software, hardware in stock, knowledgeable serves all languages and countries.
**** Good Service, software, hardware can be ordered with certainty and refunds are given for goods not delivered.
*** Serves the community, will order hardware, software, needs prodding to refund or supply goods
** Has some inventory, fabricates other vapourware, rarely refunds without pressure and harrassment, general poor service, not knowledgeable, simply trying to make money at your cost. STalls vs telling the truth about a product, such as knowing full well it no longer excists.
* Lies, doesn't deliver, never/rarely refunds. Essentially COMPUTER FRAUD and should be subject to persecution according to the law. Avoids this by the confusion of international purchasing. Worst rating to the WORST offender.

Obviously those in Catagory of the 2 or 3 star rating should want to improve to a 4 or 5 star rating, to keep customers. Those with a one star rating don't follow atari newsgroups or websites and will continue their decadent ways. Hows that for a start?

Thanks to all who gave me the email address for Ian and Mark.
Incredibly the authors are still supporting Family Tree and a memory bug fix
should be in the works. A problem that becomes apparent on a 520ST with low
memory. Also some comments for improvements are being considered.

I don't think anyone is dissapointed that you use your OWN program. It is
also nice to know that you have the ability to import/export with Family
Tree files.

Is this program in German only? You have my curiousity. Is it commercial
shareware, freeware or personal?

Brian.

Is there an Atari Viewer that can read the Adobe PDF files. I am running into numerous catalogues etc that require the Adobe viewer.

Even something that can strip out the control codes would do.

There are some motorcycle catalogues I need to read that are only offered in this format.

Thanks in advance.

I have problems with FTP to my NT server. In the NEWSie log, ALLO
indicates a file size of 6k (example). The server comes back saying
there is not enough room on the hard disk for that file (3gb
available). Maybe somewhere there is a problem reporting inaccurate
file sizes within the connection/client. However, on another provider
running Solaris 2, the ALLO command is ignored by the server and there
is no problem.
I haven't had any overwrites, but file names apeared within my MiNT
partition longer than the system could read (32 char). It eventually

required me to reformat the EZ cart that I so carefully use while on line:).

Mike

1354. STinG serial CPX ques?

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: grovem@odlidridgecrest.ca.us
Message-ID: <6a9iba$m61$2@ash.ridgecrest.ca.us>
Source record: 109439

Hi (Peter:),

Lately, with STinGs PPP connection, I am starting to see the modem compression between the modem and the Falcon. Where I used to only see about 3k/sec, on a lonely night I see burst well over 4k and up.

I went back to Setter.TTP to increase the buffer size for HSModem7 and thought what the heck, I have 68mb of ram, i'll set it to the maximum (65534 according to the selection text). After I did this I notice that in serial cpx, the buffer value was read as -2. Is there an error in the configuration text of HS modem (should the buffer size be 65536), or is it a problem with the cpx? This is a A/B Falcon, STinGs latest (as of tonight:) modules, MTU 1500, 33.6 Supra. Should I even worry about a buffer this size? I also have the fast ram flags set for drivn and scc. In the docs it states that this can cause timing problems, but I haven't noticed any bad side effects. Do you have an opinion about this?

What got me started on this was listening to the time it took my EZ135 to write data comming in through NEWSie. There was somewhat of a connection (lag?) between disk writes and serial through-put. I increased the cache size for the hard disk driver, but just wanted to make sure there were no other bottlenecks.

Thanks, Mike

One thing I noticed tonight was my configuration file. Using several
servers, sometimes I mess up the IP addresses. I discovered tonight
(no fault of NEWSie) that if I enter the IP#, I can read the NG, but
the server refuses to accept posting (as read in the log file). After
placing the domain name (news.dumb.server) everything went ok. Your
reading this, are you not?

Mike

Marking a cluster bad is what the manual refers to as "clever coding"
:). For TOS 4.0 this cluster doesn't have to be marked as bad. But it
doesn't matter if it is.

> company could design a whole new machine in less than a few years.

Well it's actaully not that hard to make a computer these days. I don't
say
that I can do it, but a person with knowledge can put together a
computer
in a few months. There are so many ready to use chips now so it's like
building Lego. Take a CPU, a memory controller with integrated PCI bus
and a UART and some other stuff and you have got your self a computer.
The main problem is the cost. It's not that cheap to make a PCB and
produce just a few motherboards. But you can do it.

> Just a thought: Why don't Falke Verlag, Centek and Wizztronics get in touch

> TOS clones.

Why not? Maybe they will sell like hotcakes and we will be a few million
TOS
users by year 2000. ;-)

Another problem for Wizztronics is the OS. It has delayed them in the
past
and I would think that it can delay them again. Apparently they can't
sell
the computer with a modified version of TOS (a 040 and 060 requires it)
as
they need a license for doing so in the US. And I guess we all can
figure out
how easy that would be with the current state of Atari/JTS and who owns
what
in TOS (I'm thinking of the Digital Research/Novel/Caldera mess). For
Centek
this is no problem as they develop their own OS, or this _is_ the

problem.
For the Milan they say they have got a license for modifying and
developing TOS
further.

> Do they even know that there are other people working on a similar project ?

I think they know.

Hmm. I don't think this is possible. I think it is technically
impossible to slow down the DMA process this much. At least as long as
there is no heavy processor activity (i. e. a lot of programs running in
the background) during DMA, the transfer speed shouldn't be affected at
all. What software did you use to check the transfer speed?

I have not heard of such program for the ST (except the old program EPSS
for the
STe/TT/Falcon which could be used for it in a limited way) but there is
one
for the Falcon called MIDPLAY by SOFTJEE.

Well it would be nice to read the manual if you had one. With my upgrade
of HD-Driver to 7 I didn't even get a manual only the disks. I guess I
still have the manual for version 6 though.

Well I have the problem with being on the other side of a firewall so
neither Java or JavaScript works at all so I have it turend of as well
or I will get alot of annoying error messages. On our intranet I can
use JavaScrip and when used correctly it can be very nice indeed. With
Java I have no experience. I still think it's very nice to have the
option
to use it and it's also nice to have atleast 2 good browsers to choose
from. Also I think Peter and the Adamas guy should talk to each others
so
that we can use Adamas with STiNG in the future. Now it uses it's own
Berkely socket interface and as Peter said that he will include support
for it in the future, Adamas should work with STiNG as well which would
be nice.

> : We just have to wait and see.

Ofcourse will people still use CAB as it's a brilliant program but
the ability to choose is worth alot. Or do we want a Microsoft situation
on the Atari as well? Only one big player on the field. Not that Alex
is near as bad as Bill... yet. ;-)

1366. Re: Holz Translater

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: Steve <stevej@linkport.com>
Message-ID: <34C86561.5591C963@linkport.com>
Source record: 109451

Actually, the guy's name is Jimmy Hotz. At one time, he had convinced Atari to waste a buttload of money developing the 'Hotz Box.' The translator software for it doesn't do much good on its own (it might have some very LIMITED use alone), but rather was designed to read 'Hotz Code' (the idea was to get record companies to encode their artists' CDs with info regarding the keys/chords/time signature/tempo of the music that is playing) so that the 'Hotz Box' would do what it's supposed to (brainless user interaction with the music). Luckily, this this stupid idea never fully came to fruition, but unfortunately Atari DID waste a good chunk of money on development. None of the software for the project was ever officially released, but there MIGHT be some beta/evaluation copies of it somewhere out there.

Argh!
I'm using SCSI-Tools. Could Magic don't like it ? Hope I'm wrong.
I've no problem at boot up with NVDI enabled. And only on the I:
partition where are stored my internet related progs.
So I guess it's a SCSI problem. But is your C: on SCSI or IDE ? Cause it
seems I've no (or less, need further experiments) problems with my IDE
drive.

1369. Reviving an Atari 512 STM...

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: mapleson@gamers.org
Message-ID: <885550085.1331822603@dejanews.com>
Source record: 109454

I've obtained an old Atari STM from a friend who no longer wants the machine. It's old, but apparently in good condition:

- the usual mono monitor,
- main keyboard unit,
- original mouse,
- external floppy drive,
- all cables.

But there are no manuals.

I have some ancient Atari disks from my old Uni days, including an assembly language word processor I wrote which I'd like to get going again (it's a bit like Tempus, but with a different feature set. Just as fast with direct screen accessing in asm). However, on boot up, the system does not appear to be recognising the existence of the external drive. :(

Everything is plugged in ok, but no icon for the drive appears and the menu option to install a drive is never available. Note that on power-up the light on the drive does indeed come on. I'm pretty rusty on the operation of Ataris even thought I used to know their working very well, so if I'm missing something trivial I'm afraid it's eluded me.

Does anybody know what might be going wrong? I would dearly love to get the machine running again.

Btw, I did have a hunt for an Atari web site and found many (looks like there's a good user base out there), but none with the kind of info I'm after, ie. basic trouble-shooting. Is there a FAQ for this newsgroup? If so, where can I find it?

Well, hopefully, I can get this machine running again. I miss programming in 68000 - one of the easiest languages I've ever had to use.

Thanks!

Ian.

PS. This is unlikely, but has anyone here ever had to connect an Atari ST to an SGI Indy? (or other SGI) If so, I'd like to hear from you.

1370. Can an Atari 520ST be connected to a PC network?

Newsgroup: comp.sys.atari.st
Date: 1998-01-23 00:00:00 UTC
From: Terry@no_email.thanx
Message-ID: <34c86e99.16894121@news1.newscene.com>
Source record: 109455

I have several pc's on a network and would like to connect my ST to it
also. (If it can be done) (Stock 520ST no/HD)

My lan is 10k eithernet. (3com cards)

If it can be done, what software/hardware would I need for the ST.
Or if you can point me to a link with some info.

Note: I'm not interested in sharing printers or other hardware just
want to be able to transfer files so I can back up my Atari stuff onto
CD-R or Zip Disk.

TIA,
Terry

> Try getting hold of a Mega ST/MegaSTE/TT Keyboard.

I would echo that! I'm not sure what exact keyboard it is, but my
tower-cased Falcon has a keyboard that is equal to, if not better than,
PC keyboards. It's got a Fuji in the top corner but other than that
there's no identifying marks.

Also, I use a trackball instead of a mouse and find it much easier.

I'm adamant that I'm not going to have anything vaguely associated with
a PC around my Atari!

No, not thru ethernet, as there are no ethernet cards available. You can make
a TCP/IP serial connection though with STiNG...

>
>If it can be done, what software/hardware would I need for the ST.

Is that all ? Just get ghostlink (serial connection) or PARCP (parallel port
connection, requires a special cable, easy to home build).

Both can probably be found on ftp://ftp.lip6.fr/pub/atari

Cheers,

Nick.

If I remember well, there are two connecteors on the external drive so that
they can be daisy chained, make sure you are connecting the right one. The
power supply should be ok (because of the led), and usually when a drive is
bad, it does make some sort of noise, even if it can't read any more.

Maybe you could try swapping the drive mechanism against a new PC HD one.
Check out the Quick FAQ (see below) for that.

>PS. This is unlikely, but has anyone here ever had to connect an Atari
>ST to an SGI Indy? (or other SGI) If so, I'd like to hear from you.

You can connect an ST to the internet with TCP/IP, so I guess a TCP connection
is possible somehow. Probably someone else knows better.

Cheers,

Nick.

Subject: Netscape Client is Free; Source Code to Go Public - DevEdge News Special Bulletin
Date: Thu, 22 Jan 1998 12:24:28 -0800

****

Today Netscape unveiled several announcements regarding our
client software and development direction. Because our developers
are so vital to our success, I wanted to make sure you all were among
the first to know. Therefore, we're sending you this special edition
of DevEdge News which tells you about our plans to make Netscape
Communicator source code and client software free, an unlimited
distribution policy, and what this means for existing customers. I think
you'll find these developments as exciting as we do in bringing us all
to the next level of Internet software development.
-- Sincerely,
Marc Andreessen
Co-founder and Executive VP of Products

Netscape DevEdge News Special Bulletin
~~~~~~
An alert for the Netscape developer community
~~~~~~
January 22, 1998

* Netscape To Make Source Code and Internet Client Free
* Netscape Everywhere -- Unlimited Distribution of the Client
* Promotional Offers for Existing Customers

* NETSCAPE TO MAKE SOURCE CODE AND CLIENT FREE
Netscape announced today that before the end of the first quarter of
1998, it will make its source code for Netscape Communicator 5.0
freely available on the Internet and that effective immediately its
world-class Internet client is free.

This bold move enables Netscape to draw from the creative power of
thousands of programmers on the Internet by incorporating their best
enhancements into future versions of Netscape's software. This strategy
is designed to accelerate development and free distribution of future
high-quality versions of Netscape Communicator to business customers and
individuals, further seeding the market for Netscape's enterprise solutions
and Netcenter business.

Availability of source code will start with the first developer pre-release of Communicator 5.0 expected by late March. Netscape intends to host the source code licensing on its web site and create a premiere place on the web for the developer community to post their enhancements, engage in discussion and receive support as they greatly accelerate development of a world-class Internet client.

Effective immediately, the Netscape client is available for free on the Netscape web site. Netscape Communicator Pro, with its expanded features, will be sold, but at a reduced price. The move to a free client makes it easier for individuals and enterprise customers to choose Netscape solutions plus online services offered within Netcenter.

More about this announcement is available in a press release at: http://home.netscape.com/newsref/pr/newsrelease558.html

Netscape Navigator standard edition and Netscape Communicator are available from the Netscape home page where there are easy instructions for downloading at: http://home.netscape.com/download. For a nominal fee, CD versions can also be ordered through the download site or by calling personal sales at 650-937-3777.

It is platform-independent, portable software and prepared to run straight
on an Atari.
You could ask your 'software supplier' for a solution, if (s)he is decent.
I would help registered 1stGuide users here, but I won't make a public
binary distribution since I did not develop the software and only use it.

However, I WILL provide a public binary distribution for the next official
release (v6b, currently in Beta stadium), since I contributed some features
and took over the Atari port.

> g> conversion can be found here: http://www.reporter.de/jpeg-lab.html

This provides some additional features which will be available in the
next release (the code is based on v6b-beta1 currently).

Well, but then it's not decent from my point of view (same as other Atari
graphics programs, unfortunately).

From: sonik@zetnet.co.uk
Message-ID: <6aa4fe$h8c$2@roch.zetnet.co.uk>
Source record: 109464

Greetings all!

Many of you may be aware that Dan ackerman has released a new OVL
file for CAB, 1.2805, and while it claims to cure a few bugs, I found
it wasn't co-operating with my CAB 1.5/STiK 1.12 setup and I kept
getting strange 'network is down' messages.

A cure maybe at hand though: if you've been troubled by this problem,
then try what Dan suggested to me...

Edit the DEFAULT.CFG STiK file and change the Carrier Detect variable
to FALSE. Reset your system (cold boot recommended) and see what
happens. There's a new dialogue box which asks you as CAB boots if
the system is online or not. The new docs for the OVL fully explain this.

If this doesn't work, Dan would like to hear about it at:

baldrick@zeus.netset.com

Thanks - that will be all

Hohohh... so now we will get Nestscape on the Atari, if someone has time
over to port it.... which will be a HUGE task. But maybe someone will
but
unfortunatly I kind of doubt it.

Talking about free software, do you all know that Id has released the
sources
code for Doom as well? I havn't heard of anyone porting that to the
Atari
either even if it's being ported to about anything else with a CPU in
it.

: Sounds like a bug in MagiC. Bugger Andreas about it.

Can't be, because the disk routines come from the HD driver,
MagiC does not have a disk driver itself (except DMAread which
is only used during the boot process).

Deactivate DMA background. If everything then works, your Falcon
has a hardware bug.

I assume he means that the OVL tells lies in the User-agent: string it
sends when connecting to a site. Some sites use this to decide what
version of their documents to serve you, and will give you rubbish or
nothing at all if they don't recognise the name. Some even give a
"Server Error" message (e.g. Barclays Bank).

Personally I do not consider such sites to be part of the WWW.

Yes, but if I understod it alright it worked with HD-Driver and not
with other drivers, so somewhere there is a problem.

> Deactivate DMA background. If everything then works, your Falcon
> has a hardware bug.

Yes, this looks to be a safe bet. Always turn of background DMA. I guess
noone will notice any difference anyway.

BTW. Have you changed anything in how MagiC handles the FRB buffer in
the last updates? If I remember correctly the problem had something
to do with that MagiC locates the FRB buffer it self and doesn't say
where it is located so it's impossible to prevent caching of that
memory area as you don't know where it is.

I didn't use any special benchmark-utilities, as I don't trust any of them.
I just copied a 160Mb tar-archive between two SCSI-disks using Kobold and
timed it with my wristwatch :-) It was significantly slower (about 90%!)
with background DMA enabled in HD-Driver (v6.30).

I was quite puzzled by this result so I switched off the Falcon, switched
it back on and tried again. Almost exactly the same result.

This could have something to do with my Afterburner, as MagiC's peculiar
DMA-transfers (hidden DMA-buffer which makes it difficult to use with
Afterburner and other machines with dedicated fastRAM and 040/060) means
that I have to make *all* ST-Ram non-cacheable for SCSI to work.

Hi Ian.

Try to boot with other disk in the drive. May be you got a disk
with a corrupted desktop.inf or it does not have any drive icons on it.
Alternatively you can boot without any disk on the drive, it will take a
while and the default desktop will pop out containing icons for drives
(volumes) A and B.
I have not experience with connectivity and networks, but given
your system, the options should be to use the ST as a VT100 terminal
or to use TCP/IP trough STING...

Hope this helps... and welcome back to /|\ :-).

Regards.

Daniel.

Uhhh! We have a pattern here. What HD driver do you use, Pascal? If I
use an old (v4.5) release of HDDriver I get NO faults. The faults only
occur with CBHD.

>Argh!
>I'm using SCSI-Tools. Could Magic don't like it ? Hope I'm wrong.

Oh, does this have it's own driver? It's looking as though Magic 5.11
is not happy with some drivers. I don't know much about the i/fs
between Magic and drivers, if Uwe is listening (??) he may have some
thoughts about this.

>So I guess it's a SCSI problem. But is your C: on SCSI or IDE ? Cause it
>seems I've no (or less, need further experiments) problems with my IDE

Yes. My C: is on the TT SCSI ID0. Hmmmmm

j> the convention for usenet and internet mail-messages *is* hard-
j> formatted text. 65-72 columns is the recommended width.

So if you have the capacity for 132 columns, you're still stuck with 65 columns. That's backwards thinking in my book. I see no reason for hard format text in a message, unless you have tables that require it. Why not let the end user taylor messages to fit their own needs?

j> Most terminals will wrap lines, but it doesn't look particularly good.

It looks fine if the lines aren't hard formatted. Where it looks bad is if you word wrap at, say, 70 columns, and every line is coming in hard formatted at 80 columns. But if the entire paragraph is unformatted, it looks great when you wrap.

j> The viewer's task is to display the text as it was written, *not* to
j> reformat it in any way. It's a viewer, not a DTP-program.

Since when do only DTP programs reformat? There's nothing wrong with a viewer reformatting to fit your screen. But there IS something wrong with a viewer that won't allow you to see all the text in a message, because it neither wraps nor allows horizontal scrolling.

No it isn't. A line should never be longer than 80 characters long, you
should aim for around 72 characters for fresh text. Most mailers and
newsreaders know that the likes of Microsoft and Netscape regularly
screw up lines and compensate for them.

I disagree with this, completely. Ideally, all paragraphs should come in with NO hard CR/LFs, because you have no idea how many columns the destination has. Any decent FidoNet reader realizes this and wraps lines according to your settings. Why should Internet software be any different

I personally find any reader that doesn't wrap lines, or at least allow you to scroll them, unacceptable. If someone sends 132 column lines, and you're limited to 80 columns, that's 52 characters per line you can't see. If they send entire paragraphs unformatted, you miss even more. Unacceptable.

Wouldn't that RAM be better served for your RAM cache, with your disk cache on hard disk? The way you surf, if you call the same site every day, you have to download all its graphics every day. I have a 30 meg disk cache, and the only reason it's not bigger is I don't have the room right now. My RAM cache is 6 megs (no bigger for the same reason).

Because the convention says it should be. Fidonet isn't internet. And yes,
paragraph-formatted texts are nice if you need to reformat it somehow (e.g.
you want to print it in a magazine or something.), but the convention for
usenet and internet mail-messages *is* hard-formatted text. 65-72 columns
is the recommended width.

> I personally find any reader that doesn't wrap lines, or at least allow you

Most terminals will wrap lines, but it doesn't look particularly good. The
viewer's task is to display the text as it was written, *not* to reformat
it in any way. It's a viewer, not a DTP-program.

I *believe* (ie haven't tried it) that the last version of Atari
Ghostscript could read multiple page PDFs, though I seem to remember a
long discussion about tricks needed to get it to work. It probably
won't do Acrobat 3 PDFs though.

One option to avoid manually stripping the text out (even if that's
possible), which should also work with Acrobat 3 docs would be to try
using Adobe's proxy server (access.adobe.com) for web documents. You
set it up like any other proxy server but when you select a link to a
PDF it converts it into HTML (but without pictures I think), which you
could then save out from CAB. This is aimed primarily at visually
impaired users using lynx with a screen reader, but will *probably*
work with CAB. Again, I haven't tried it so no guarantees, but it's
worth a try. Full details are available from the Adobe web site at:

http://www.adobe.com/

though you'll have to poke about in the search bit (look for Acrobat
Access as a starting point) as I can't remember the exact URL at
present (saw it at work the other day).

Not sure about the From problem but the passwd file has to have your username(s) and real name(s) in it. Okami ignores all mail to users which aren't listed in the passwd file. Just copy/edit the example line and change the relevant bits (Okami only uses the username and real name, it ignores the rest of the line but presumably expects it to be there.). See also the relevant section in okami.hyp.

You might need to edit sigs.inf if your sig isn't working properly, or possibly edit the relevant bit of o.inf so it finds sigs.inf and applies the contents in the way you want (ie before editing the message, after editing it etc).

>BTW: Somewhere in the o.inf I must fill in "mail.exchanger". What is
>this suppose to be?

I think it's your SMTP mail host. That's what I put in at that point to make the NOS-type messages Okami exports look like the ones Oasis 1 produces. Whether POPwatch actually uses that bit I don't know (Gary?). *AIUI* POPwatch always uses your mailhost anyway rather than trying to connect direct to the addressee's site. NOS does try to go direct if possible, IIRC.

Dennis McGuire <mcguired@erie.net> wrote:

> Is the CAB_JPEG.OVL file still needed with the latest versions of
> CAB.OVL??? Does CAB use both?

CAB_JPEG.OVL and CAB.OVL are two differend things. CAB_JPEG.OVL
is used to decode JPEG images. CAB.OVL is used to access the TCP/IP
stack (STiNG/STiK/PPP-Connect/MintNet). So you'll need both.

> I disagree with this, completely.

SO-RFC 1036 disagrees with you:

4.3.2. Body Conventions

Although body lines can in principle be very long (see sec-
tion 4.6 for some discussion of length limits), posters
SHOULD restrict body line lengths to circa 70-75 characters.
On systems where text is conventionally stored with EOLs
only at paragraph breaks and other "hard return" points,
with software breaking lines as appropriate for display or
manipulation, posting agents SHOULD insert EOLs as necessary
so that posted articles comply with this restriction.

NOTE: News originated in environments where line
breaks in plain text files were supplied by the
user, not the software. Be this good or bad, much
reading-agent and posting-agent software assumes
that news articles follow this convention, so it
is often inconvenient to read or respond to arti-
cles which violate it. The "70-75" number comes
from the widespread use of display devices which
are 80 columns wide, and the desire to leave a bit
of margin for quoting etc. (see below).

Reading agents confronted with body lines much longer than
the available output-device width SHOULD break lines as
appropriate. Posters are warned that such breaks may not
occur exactly where the poster intends.

> Ideally, all paragraphs should come in
> with NO hard CR/LFs, because you have no idea how many columns the
> destination has. Any decent FidoNet reader realizes this and wraps lines
> according to your settings. Why should Internet software be any different

Why do you assume that the reader has any more software than a telnet client?

> I personally find any reader that doesn't wrap lines, or at least allow you
> to scroll them, unacceptable.

It is because there are so many broken newsreaders about.

> If someone sends 132 column lines, and you're
> limited to 80 columns, that's 52 characters per line you can't see. If they
> send entire paragraphs unformatted, you miss even more. Unacceptable.

It is, which is people shoudln't be sending lines longer than 80 characters.

1426. Happy New Year from Floppyshop

Newsgroup: comp.sys.atari.st
Date: 1998-01-24 00:00:00 UTC

****
PRESS RELEASE FLOPPYSHOP
17TH JANUARY 1998 ABERDEEN, SCOTLAND
****
Happy New Year from Bonnie Scotland (well it's a bit dull and drab at the moment, but you know what I mean!). Since last October's Atari Shows, not much has been heard from Floppyshop, so what exactly are we up to? Hibernation's out of the question, this winter's been far too mild for that, even this far north!

Well, we've not been resting on our laurels for starters! In fact quite the opposite if truth be told. I'm always reluctant to discuss new products too early but there's just so much going on that I feel it's time to let a few cats out of their respective bags. Between now and the end of April, we are planning to release Positive Image 2, a Falcon specific CD-ROM, two other CD-ROMs (one of which will be cross platform but with a strong Atari bias) and three exciting new music based products. That's in addition to the re-launch of the popular Easy Text Professional and Easy Text Pro Vector DTP packages. As the year progresses, we will continue to bring you exciting new products for your Atari computer.

I see 1998 as a year full of opportunities as far as the Atari market is concerned. Many ST owners have purchased a Falcon (new or secondhand) over the past couple of months and are ready to further enrich their computing experiences. New Atari clones (Phenix and Milan) are set to burst forth onto the market this year offering power beyond that ever thought possible for Atari machines. The Hades is becoming affordable and there's a whole lot more exciting developments going on behind the scenes. If this all sounds a bit high end, do not dismay, all (except the Falcon CD!) of our new releases are ST friendly and will push your faithful friend (the ST, not me!) to its limits.

Full details of our new releases will be made as the products become available. If you are on our catalogue mailing list, you will receive these notifications automatically, otherwise they will make their way to comp.sys.atari.st and your favourite BBS. Our full ST and Falcon catalogues are available for download directly from:-

http://www.users.zetnet.co.uk/sdelaney/downloads/downloads.html

Details of the first five of these products (available now) will be posted in a few days' time. In the meantime, please remember our seasonal sale ends on 31st January 1997. Here's a quick rundown of the special offers. Please note all prices are in UK pounds. Overseas

customers should make payment by credit card (Access, Visa, Mastercard, Eurocard) or in UK funds by way of a bank drawn on a UK bank, International Money order or Post Giro.

DTP+Graphics CD-ROM #25 + P&P (#2 UK, #3 Europe, #4 ROW)

CD-ROM Bundle (DTP+G, Suzy B Vol 1 & Vol 2) #65 + P&P (#4 UK, #5 Europe,
#7 ROW)

EZ-Art Professional #5 + P&P (#1 UK, #2 Europe, #3 ROW)

Easy Stitch #5 + P&P (#1 UK, #2 Europe, #3 ROW)

Family Roots II #10 + P&P (#1 UK, #2 Europe, #3 ROW)

Steinberg Pro 24 III #10 + P&P (#2 UK, #3 Europe, #4 ROW)

Ten Star Games Pack #10 + P&P (#2 UK, #3 Europe, #4 ROW)

Masterplan Spreadsheet #10 + P&P (#2 UK, #3 Europe, #4 ROW)

I regret all other special offers in our Christmas catalogue update are now completely sold out.

Grab these bargains while you can and keep a look out for more exciting new developments from Floppyshop as the year progresses.

Regards

Steve Delaney

1427. Electronic Cow Appoints Floppyshop as UK Distributor

Newsgroup: comp.sys.atari.st
Date: 1998-01-24 00:00:00 UTC
From: Steve Delaney <sdelaney@zetnet.co.uk>
Message-ID: <6adasp$5ci$2@irk.zetnet.co.uk>
Source record: 109308

```
**************************************************************************
PRESS RELEASE FLOPPYSHOP
17TH JANUARY 1998 ABERDEEN, SCOTLAND
**************************************************************************
ELECTRONIC COW APPOINTS FLOPPYSHOP AS UK DISTRIBUTOR
**************************************************************************
Floppyshop are pleased to announce the aquisition of exclusive UK
distribution rights to the entire range of Electronic Cow music
products. Electronic Cow are a small English software developer
dedicated to producing high quality applications for Atari based
amateur and professional musicians.

Apart from a few honorourable mentions in Atari Computing and the
music press, Electronic Cow have gone relatively unnoticed, despite
producing three impressive packages over the past couple of years. It
is with this in mind that we at Floppyshop have set out to remedy the
situation and make these excellent products available to the masses.
Our commitment to supporting these products even extends to a free
technical helpline which will be manned by Electronic Cow to answer
any questions you may have about the use of their software.

The three packages in question are MIDI Arpeggiator (create arpeggio
style mini-sequences or use as a live sequencing tool), Sound Chip
Synth (harness the power of the Atari's soundchip for use in your MIDI

compositions) and Snippit Synth (create your own library of
extraordinary sounds for Cubase with this granular synthesiser). All
three require a 640x400 display as a minimum requirement, so you'll
need a high resolution monochrome monitor if using them on an ST. They

all run in both colour and mono modes on the TT and Falcon. All
products are available and in stock. Here's the full feature list for
each product.

**************************************************************************
MIDI ARPEGGIATOR by Electronic Cow

Program Type:- MIDI Sequencer
System: ST(FM), STE, Falcon and TT.
Memory Required: 1 Mb.
Display Type: Mono monitor on an ST. Any display type on TT or Falcon.
Price: 15 pounds
Postage: UK 2 pounds, Europe (including Eire) 3 pounds, ROW 4 pounds
**************************************************************************
PRODUCT INFORMATION
**************************************************************************
```

What does it do?

Use MIDI Arpeggiator to create arpeggio-style mini-sequences for use in your compositions, by saving the parts as standard MIDI files (both

type 0 and 1). MIDI Arpeggiator can run as either a desk accessory or normal program, so it can be open at the same time as your favourite GEM sequencer (memory permitting). Alternatively, use MIDI Arpeggiator

on its own as a live sequencing tool with its many real-time functions

and play modes...

MIDI Arpeggiator's main features include:

* Two sixty-four step tracks, divided into four arrangeable patterns

* Built-in three channel MIDI mixer with two user-programmable auxiliaries (preset for GM effects reverb and chorus)

* Program change, volume, pan, and MIDI channel settings for each track

* Auto-pan, track muting, and left/right markers for looping sections

* Lots of play modes: forwards, backwards, ping-pong, random, and chord mode

* Auto-harmony part with four different algorithms

* Real-time input (using on-screen or MIDI keyboard) and MIDI output

* External MIDI clock sync (master only), and MIDI sequencer start/stop responsive

* Save single patterns as type 1 standard MIDI files

* Record entire performances to disk in real-time as type 0 MIDI files

* Load and save arpeggio data from and to disk as an *.ARP file

* On-line help (utilising ST-Guide) and eight-page manual

* Free user support

****
****

SOUND CHIP SYNTH by Electronic Cow

Program Type:- Music (Audio and MIDI)
System: ST(FM), STE, Falcon and TT.
Memory Required: 1 Mb.
Display Type: Mono monitor on an ST. Any display type on TT or Falcon.
Price: 10 pounds
Postage: UK 2 pounds, Europe (including Eire) 3 pounds, ROW 4 pounds
****

****
PRODUCT INFORMATION
****
****

What does it do?

Use Sound Chip Synth to unlock the burbling sonic potential inside the

ST's built-in FM sound chip, and create some rasping analogue-style noises. Sound Chip Synth's great as a monophonic sound source in a MIDI set-up, but can equally be used as a sample generator for other software to play your burbles with...

Sound Chip Synth's main features include:

* Square wave oscillator (30Hz to 125KHz) with two sub-oscillators

* Noise generator (4KHz - 125KHz) mappable to any oscillator

* Oscillator volume, detuning, and octave shift controls

* Amplitude modulator with depth, rate, and four waveforms

* LFO with depth, rate, and four waveforms, and pulse effector

* Four-pole envelope shaper mappable to amplitude and/or pitch

* Real-time MIDI control, with portamento and omni-mode support

* Export sounds as AVR/AIFF/SPL format samples (8 or 16-bit)

* Variable sampling rates: 16, 22, 33, 44, 48KHz and user-definable, with digital audio playback on the STE/TT and Falcon

* Load and save patch data from and to disk as a *.SYN file

* On-line help (utilising ST-Guide) and eight-page manual

* Free user support

Sound Chip Synth will run on any Atari with at least one megabyte of memory and a mono or colour 640 x 400 (or better) display.

****
SNIPPIT SYNTH by Electronic Cow

Program Type:- Music (Audio and MIDI)
System: ST(FM), STE, Falcon and TT.
Memory Required: 1 Mb.
Display Type: Mono monitor on an ST. Any display type on TT or Falcon.
Price: 16 pounds
Postage: UK 2 pounds, Europe (including Eire) 3 pounds, ROW 4 pounds
****
PRODUCT INFORMATION
****

A Granular Synthesiser - for all Ataris

What's a granular synthesiser?

Granular synthesis is a method of sound generation that uses small sonic events to create a composite sample. In Snippit, you have complete control over each sonic event (or grain), including the type,

and its placement in the three axes of audio: time, frequency, and amplitude. Use Snippit Synth to create a vast library of extraordinary

sounds, for use with sample sequencers, professional audio applications (like Cubase Audio), or as a source for your MIDI sampler.

Snippit Synth's main features include:

* Five different grain types (square, sawtooth, triangle, sine, and custom)

* Import AIFF or AVR samples, or any raw data to use as a custom waveform

* Up to five hundred grains per chunk, with four chunks per sound

* Mix, sequence, ring or amplitude modulate chunks

* Create samples up to 400,000 sample points (roughly 12 seconds!) long

* 20Hz to 20KHz frequency response, with pitch sweeping

* 20Hz to 20KHz frequency sweeps with various polarity settings and shapes

* Five different amplitude envelope shapes, with relative gain setting

* On-screen waveform display with four draw modes and colour options

* Variable sampling rates: 12.5, 16, 25, 33, and 50KHz, with digital audio playback on STE/TT and Falcon

* Saves samples in eight or 16-bit AVR, AIFF, or SPL formats

* Alternatively, save the data settings as a *.SNP file for later use

* Supports MIDI sample transfer with drivers for SDS-compatible samplers, and the Akai S900/950

* Sample auto-crop and optimise tools

* On-line help (utilising ST-Guide) and eight-page CD-booklet style manual

* Free user support and upgrades

Snippit Synth will run on any Atari with at least one megabyte of memory and a mono or colour 640 x 400 (or better) display.

1428. Hensa Micros FTP site

Newsgroup: comp.sys.atari.st
Date: 1998-01-24 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <6adatm$4hp$1@newsbell.bellglobal.com>
Source record: 109309

Of course, The Author of Family Tree directed me to the Hensa Ftp site to get the latest version of Family tree that was uploaded there. This being my first visit I was surprised to see that they are ELIMINATING the Amiga and ATari sections because of a lack of interest.

If I am correct DEMOLITION begins on the 27th of this month.

Now, If each FTP site continues in this trend, then soon all valuable archives will be lost. Heck this is why I am on the internet is to find this stuff and each place seems to be disposing of the very information I came on to get.

Is there anyway to transfere these files to other FTP sites or find a SITE that can be certain to be a safe haven for Atari programs in the future?

I am not certain what the most popular Atari FTP site but I would not be surprised if one day they say, "we are demolishing the Atari files to create an intergalatic information hiway....now drink these 8 pints of beer..,"(hitchhikers guide to the internet:-).

Having only used this site once, today that is , are most of these files on other FTP sites?

Also I do remember reading something about an FTP site being closed soon, awhile back, is this site the one that was being discussed?

Well, that should be all. Thanks.

Also, who do I email at the Hensa FTP site to discuss the matter of retrieving the files or moving them to another location?

When I first got on the internet, I tried to use CAB with the Cache in Ram thinking it would be way faster then off a floppy. However I never could get it to work properly and gave up, hooked up my HD and never thought about it again. What kind of Ramdisk are you using? I am just using a standard non recoverable, ramdisk without any fancy formatting features that some have.

Yes, so do I, but maybe for a short while you shorten the rows somewhat so
that I don't have to load in a text editor to see what you have said.
Please be helpful to fellow Atari users:-).

>Ask John Rojewski, the author of
>NEWSie to implement this feature.

Please John. Implement this feature. However I rarely run into to many posts
that need the rows shortened.

Am I wrong about this? Think not.

No I don't believe you are wrong, Its a fact at the moment.
Freeware users are pretty patient and NEWsie updates appear pretty frequent
so its a very good system. While we wait updates come faster than I can install
them:-).

Sorry to bud in here, but perhaps a question I asked one month ago can be answered since, this conversation has brushed upon an earlier problem I have discussed.

I have an early STe that was manufactured with some sort of dma problem. Atari issued a fix that I never received. Anyways, the STe will corrupt harddrives because of this bug. What I need to know is, can I be safe with an IDE harddrive on the STe? If DMA has nothing to do with the IDE drives, can I use an internal IDE drive without the corruption? I would prefer to use the STe on the internet vs this 520 simply because of the blitter and newer TOS.

What version of Dynna Cadd do you have? I have demos for version one and version to. I haven't seen version 2 demos on any ftp sites by the way, so if anyone wants me to upload it somewhere I will try. It is four disks. The last version I have I pick up at the TAF show in 1992.

I have a selection of Atari ST titles for sale.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...

SCSI SC-ROM drive, Atari CD ROMS, 16-bit sampler cartridge/hardware.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) 3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) 4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) 5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 3

Superleague Soccer (1d,ss) 3
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 4

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2

Aloha again All!

Does anyone know if 'Studio SON' has English Docs? I think it is in German and I am (sorry to say) that I do not understand the Language.

Please if anyone kbnows please let me know. Looks like a fantastic program.

Aloha

VErn

I'm currently working on an area on my site. This is on the web, not usenet, but I will make arrangements to have the info available to people without web access. I'll have more details soon. See also "Re: Rotten Atari Dealers" for some comments from Hallvard Tangeraas and Brian Van Tilborg on this subject.

You can get the shareware program from Dr. Bob to do this. Its an icon
editor and it will allow you to expand and edit your resource files...

I tried about six different links on the main page with CAB 2.5/CAB.OVL
1.2805: all lead to a page requesting a password. It sounds like you're
using an older overlay.

Source record: 109328

Phantom of the Laser allows the SLM 804 to be left off when not in use without fouling up the DMA. It used to be sold commercially, but then he started selling it as a do it yourself instruction brochure for about $15. I went that route, and still have my copy. Since it may be copyrighted still, it would be best to see if it can still be purchased from the author rather than make copies of mine. I'll post the address when I find it.

I don't know anything about RSC030, but what I use is Resource Master 2, available from:

http://www.cix.co.uk/~inactive/

Look in the "Software" Link for it. It is VERY easy to use. Just open the new_icon.RSC file, and you will see iconified sections of the file. Double-click on the appropriate section(s), and you should see the actual icon(s) you want. Then do the same to open your DESKICON.RSC file. Once both icon lists are showing, you can just "drag and drop" the new icon into your DESKICON.RSC file. Save the file, quit the program, reboot or change resolutions, and you're all set! You can even edit the icons if you want! This program is very visual, very easy, and pretty fun to use! Try it!

Mike Freeman

1451. Thanks, Re: Serial upgrade problem

I thought I put my oar in here. I was one of the first people to buy an ELectronic Cow package, the original MIDI Arpeggiator, and I wouldn't be without it now, it makes putting togethr bouncy basslines so easy it's silly. The new versions are stunning, especially now you can run it as an accessory. If you make music with an Atari, buy it now.......

I've also got Granular Synth, this is a good program to play with when drunk as you won't care that you understand nothing of the maths behind it, if you use a sampler then the odd-ball, twisted and unique samples you can make with this package will be of ton's of use to you, and unlike a sample CD, no-one else will have them....

I do know Danny (McLeer, the programmer behind them) and he's a nice guy and you ought to buy his software.....

chrisc

Until the problem is properly sorted out, allow me to suggest my
own work-around which preserves the apps, even when received data
may become corrupted:-

Whatever partition you use for the Application and its needs,
use a separate partition for all stuff received from the outide world.

For example, I use partition N for Newsie (and other clients), but
partition P for: Newsie\Mail\; Newsie\Offline\; Newsie\Work\.
Similarly for CAB I use P:\WWWCACHE\.
And for FTP, P:\Download\.

I do hope this helps, temporarily.
Charles.

Sorry, no! I have fiound the same problem.
But here's a related problem which someone may solve too: that some posts
do not show in Offline Reading with word-wrap. It is necessary to find
the relevant ###.txt and reformat it to see it properly.
It's a real nuisance!

1459. 4 bombs with Pacifist.

Newsgroup: comp.sys.atari.st
Date: 1998-01-24 00:00:00 UTC
From: Gareth Davies <garethd_@dial.pipex.com>
Message-ID: <6abc5edhv1@plug.news.pipex.net>
Source record: 109366

Just a quick plea for some help!

I'm trying to use Pacifist and having set up the config file properly (and tried many Tos versions) Pacifist is still bombing out - 4 bombs with monotonous regularity. I don't even have to load a prog - just moving the mouse pointer seems to do it. I'm trying to run it on a K6 200 under Win95 with 32mb.

Can anyone help.

Thanks.

Gareth.

: register in the U.S. Because none of these are true, I don't use
: it.

I've never had a problem using 1st Guide under Geneva. It seems to multitask fine. I never had much of a problem with the language situation either, as there is only the one menu in 1st Guide and the only features available in it are zoom in and zzom out, labeled "+" and "-" respectively.

I do stilluse Gem-View myself though, because I want to be able to convert from one file type to another and 1st Guide doesn't have any kind of save feature, it is just a viewer. Plus, I had already registered Gem-View when I first discovered 1st Guide. But as time passes and 1st Guide gets update and Gem-View doesn't, I'm sure the day will come when I will switch over and register the new program.

Certainly not the most suitable, but not totally inept either when it comes
to graphics. I do my web surfing with the 520ST and a mono monitor. Generally
with graphics off, as you never know what kind of page you are going to and
some of those animated gifs and what have you can be deadly. However when I
hit a good site, I turn graphics on and watch the minutes count by:-). Then
I load the picts into my STe and view with either speed of light or photochrome
and have a happy day. The pictures in photochrome in particular are good enough
to impress my Windows friends. Of course its a comprimise, but it works.

>
> comp.sys.atari.st

> this should be dropped, why? Because it's not just
> ST's anymore.

Now that would change everything for the better? :-).
I also want comp.sys.atari.ST and a
comp.sys.atari.STe
comp.sys.atari.TT
comp.sys.atari.falcon
comp.sys.atari.hades
comp.sys.atari.vapourware
comp.sys.atari.TOS 1.0-1.2
comp.sys.atari.Mint.
comp.sys.atari.blah blah blah......

No, wait, lets just assume that comp.sys.atari.st is really
comp.sys.atari.TOS
or just comp.sys.TOS.
because they don't have to be ataris

Aw, what the heck, why don't we just leave it the way it is.

Good then.

I downloaded some *.DXF files that I wanted to use with DynaCadd from a web page. There were 3DS files (which I haven't found a way to read on the Atari yet) and DXF (autocad std) files available. The DXF files were self extracting compressed files labeled foobar.exe. I took the chance and renamed them to foobar.zip, and bingo, ST Zip extracted them no problem at all. I'm sure the smart ones already know this, but It was new to me. DynaCadd loaded them happily and converted them to 3D2 where they were imported into Raystart and rendered quite nicely.

Mike

: loading a pic. I can't imagine why it would act any different under Geneva

No, you're right, it takes over the system. But at least it works in a window (unlike the Apex viewers, which don't even have as good an output, explain that). OK, I agree, in a perfect world, 1st Guide would give a few cycles back to the OS every second (perhaps a setting to do this so single-taskers don't take a speed hit).

: I guess you've never used Control-A.

Dang. No I hadn't. OK, I agree with you 100% -- English documentation is a must. I didn't even realize there was all this stuff under the hood. I never looked a second time at the text files that came with the program -- they were all in German. I still have no idea what the program is capable of. But I tried ^C just for the heck of it and got some drive activity, so I checked my clipboard folder and guess what, 1st Guide does have a save feature. But it looks like it only copies the file in its original format, still no conversion ability. I'll have to see what I can make out of the documentation now. The program doesn't have a resource file though, so translating the dialogs isn't going to be as easy as it could otherwise be.

Wait a moment. You mean that the HDDRIVER DMA background switch has an
effect on IDE performance? This is absolutely impossible because IDE is
not related to DMA at all and this switch has no meaning for IDE drives.

> not like to do SCSI while in high color, so I make sure not to use my SCSI

You don't have a clockpatch installed?

Yes, this can be related to the Afterburner, indeed. The Afterburner is
no good choice for making tests of this kind because with the
Afterburner the system behaviour on that level is quite different from
what you get with other Ataris.

This doesn't matter because the manual for version 6 is basically the
same in this respect. It makes no sense to combine each update with a
new manual because this would only lead to higher costs for an update
which the user would have to pay. Of course you can get an additional,
new manual if you pay for it. Contact System Solutions about this.

Are you referring to GEM or Linux? To GEM it will surely never be
ported. Did you ever look at the complexity of this program? Depending
on the platform the binary has a size of about 10 MByte. This is more
than the main memory most Atari users have. And for a Linux version: Do
you have Motif 2.0 for your Atari? Surely not. But as far as I can see
Motif 2.0 is required in order to port Netscape.
I think you haven't yet thought about very basic things required for a
port. It needs more than the sources to do this. And remember: Java
sources (at least for Java 1.02) are available from Sun and there is
still no Java port for the Atari. The situation will be similar with
Netscape.

I use Magic most of the time and I don't have any problems with Sting. I sometimes have the odd problem with Stik, when I don't turn 'pre-emptive' off.

As for lost files/clusters, I sometimes find Newsie hasn't deleted the articles when it should have but deletes them from the 'xover.txt'. So far I've had no lost clusters. I'm not sure why the files aren't deleted, could be because I'm using long filenames on that partition, then again it could be something else.

Hi all!

I have moved my Atarirelated homepage to the largest Internet community in Sweden, Passagen http://www.passagen.se/ You will find the new pages at:
http://hem1.passagen.se/atari/

Thank's for all the mails sent to me about that.

Some of you have notified the long rows made by me (ASH Emailer).
The point is that it looks good in Emailer, MS Outlook Express, Netscape etc. Emailer wraps the text fine. Its up to the mailer app to wrap text, I
know that NEWSie doesn't do that. Ask John Rojewski, the author of NEWSie to implement this feature. Am I wrong about this? Think not. If you use
QED or Everest to create mails then the text wraps fine, that's why mails looks fine sent by NEWSie. But the opposite?

>has a hardware bug.

Hmm .. I'm responsible for starting all of this <blush>.

I could not remember which change I made caused the error 'Read Error on C:' after Magic V5.11 had loaded and just before it processed the /XTENSION/ folder. The same error occured with NVDI v4.11 R6 after it started initialisation but before it read the installed TTF/SPD font files. These errors did not occur if I used HDDriver v4.5 but did occur with CBHD v5.02.

Today I cleared C:, re-installed C: and copied back the old contents - no change.

I then re-installed Magic and NVDI on C:. This booted up with no errors.

It looks as though there is something in C: (15Mb of stuff!) which causes the error. I have tried most of the obvious experiments but the error persists. I am now about to begin the LONG job of progressively rebuilding C: on the base of Magic/NVDI until the boot-up error occurs.

But ..... tell me more about DMAread. The errors I'm getting only occur during boot. Is there any reason why DMAread should not be happy with CBHD? BTW, DMA background is de-activated.

Here is a new game from reservoir gods, the guys who brought you
double bubble2000, tautology, Skyfall etc.
Static is a a Solitaire type game (the cards), of course a little
revisited, :) extra little things.
This is shareware but is not really restricted, you can enjoy it until
you register.
All I can say is, VERY nice game, good music, easy to concentrate, all
graphic true color, etc.

You'll find a link from my web page to theirs.

>Anybody know where in Seattle I can get my Atari 520ST repaired? I think
>it's the drive... also, where can I get software...

Yes, Find a used drive. Probably can be had for $20 for a SF314 DS 720k diskdrive.

Please give a description of your problem. Also do you have an internal or external drive on your 520ST? On the external drives STs sometimes the 6 inch drop is very effective in getting the floppys attention to boot. If you are having a hard time reading floppy disks, then their could be a number of factors. On 520STFs the internal floppy drive belt has been known to fall off. Put the belt back on and go again, also find a program on the FTP sites that test floppy drive speed.

Commercial software, their are a number of dealers in the United States and Canada still selling NEW Atari software. There are also many posts from vendors Selling NEW OLD STOCK Atari software that is from 2years to 13 years old.

Public Domain, shareware and commercial software can be found at Many FTP sites, and Web Pages supported by the software authors or a support Web Page.

Ram upgrades and Atari service parts can be found at Best Electronics.
email bestelec@concentric.net

I believe B&C computer vision also has the list of what you need.
off hand I think it is
http://www.mycomputer.com (however don't hold me to this:-).

Good place if you want to upgrade your 520ST to 1 or 2.5 Meg of ram and use it for the Internet.

Each month an FTP listed is posted in this Newsgroup giving the latest Atari supporting FTP sites.

There are a lot of good ones with the most current software. You may want to go to
http://www.umich.edu/~archive/atari/

Get Starter.TOS for the latest in zip/lzh/arc/zoo compression software. Since you are using a 520ST you will need to use the smaller jr versions of these compression programs without the shells.

If you have an IBM you can unzip files there with it and copy the files to
a 720K disk to use with your atari after you have successfully got the
drives working again.
>
>Thanks much,

1486. STing/Xcontrol/Toronto Atari Federation

Newsgroup: comp.sys.atari.st
Date: 1998-01-25 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <6ag4alpbc6@newsbell.bellglobal.com>
Source record: 109193

Last Wednesday I attended my very first meeting of the Toronto Atari
Federation. It was well worth the drive, and having ran a computer club
for a number of years I know the work that goes into creating a newsletter
getting guest speakers, and simply having everything work so people are
well informed and entertained at the same time.

M. Racine was there demonstrating, the STing/STik CAB/NEWsie and Mint combinations
and I can tell you he did an excellent job.

I didn't really know how many ST users want to get their Ataris on the inter
net and still think they can't. Since I use a 520ST with TOS 1.0 alot of
users came to me with very basic questions on Set up of STing.

While STing is alot easier to set up today it still isn't obvious to the
very basic user. I found many who still live in a Cave and their STs software
is still in the 1980's.

One user had STing configured perfectly except for one thing. He showed me
his STing.inf and told me everything loads but he couldn't find the STing
Cpx serial window or the other modules. Actually he just pointed to a picture
of STing control panel in the TAF newsletter and said it didn't come up.

Well surprise, he was the first of 3 users that night with old STs that didn't
have the XControl panel. I honestly suggest that Xcontrol be distributed with
STing on club disks as well as on Internet Web pages.

Another user of course had HS modem all wrong when he copied it into the Auto
folder. Luckily this is what users groups are all about:-).

Other users , seeing Taf users with Falcons and TTs on the web honestly
believe that an ST can't get on the internet. Even though they are told it
works. I can't confirm it, but I think I was the only person there with an
ST on internet. I think this is why they came to me after I mentioned I have
my 520ST working just fine with TOS 1.0. Some people didn't know they could
exit the dialer after establishing a connection.

The TAF newsletter has an excellent article written by Dan Dreibelbis
on setting up STing and has examples of his dial.scr and default.cfg included.
This compliments the article written by Frank Lockwood in October 1997.
Again the only thing overlooked was simply the need for the xcontrol panel.
I think these article should be distributed more broadly than TAF.

I intend to write a follow up article for a future newsletter covering the
basics of getting the old ST on the internet. Since getting on with version
STing 1.06 I have successfully connected to 3 other internet providers with
PPP/PAP on the first try.
Of course I only do this for test purposes.

Its a long post, simply to say good work, and lets not forget about Xcontrol?
Brian.

>the DMA chip works.

Yes it is 100% certain. JMG compushoppe had some to fix mine under warranty,
but for some reason I never found the time to take my STe in to get it fixed.
What a fool I was. I will in future hunt down a DMA chip and replace it.

>Yes, this should work fine. That is, if it's really the DMA chip that is
>causing your SCSI problems.

Thats great news. Since I am incredibly lazy and always take the path of
least resistance. So I will try to find one of those internal ide kits.
I will note that the Bad dma chip doesn't affect my SLM804.

Thanks Uwe, you have all the Hard Drive answers and have confirmed my
limited problem solving abilities:-).

>>
>>Me ,too, if there are any UK sellers.

Obviously there are alot of TTs out there now without graphics cards.
I will be purchasing a TT before the year is done, and I most likely will
be looking for a graphics card as well.

Now as if I haven't made enough comments. Here is another idea to add to
the many ideas I am getting into.

A web page with a list of TT owners SERIOUSLY looking for a graphics card.
Then taking into consideration the response, purchasing/ordering/manufacturing
a said lot for those who order. I read earlier the post saying HOMA systems
would need an order of 100 boards. Correct me if I am wrong here, I can't
prove the post, so consider it hearsay for the moment, however I believe that
the figure could be me internationally.

Just a thought. I believe QFunk is also looking for a card too.

The latest version was dated April 18, 1991 (at least, that was the latest I ever got) and does indeed run fine on the Falcon, even in Falcon resolutions, although I think it crashes in modes above 16 colors. Also I remember it running much better after I switched from TOS to Geneva. Anyway, I don't use it anymore, nor do I know where to get the latest version of it, sorry.

From: Chris Koebel <ckoebel@sympatico.ca>
Message-ID: <6ag7ej$25j$1@news21.bellglobal.com>
Source record: 109200

Hi All!

I have recently acquired (last weekend) an Atari Mega ST4 system with a single floppy, mouse/kb and an SC1224 monitor. I had it running yesterday, trying out differnet programs I was finding on the net, and left it sitting at the GEM desktop screen. I went to look at it again later, and the screen was blank. All the power lights were on, but nothing on screen, not even a glow. The monitor makes the right noises when I turn it off and on, but will not display anything. I have tried shutting the system down a number of times... Do I have a dead monitor, or does it sound like something else??

Thanks in advance!
Chris

3DS is Autodesk 3D Studio file format. Rosetta dosen't do a very good
job with DXF files, unless the geometry is very simple and dosen't
support 3DS (which wasn't developed until after Rosetta was released
way back when).

>The last version I have I pick up at the TAF show in 1992.

I have DynaCadd V2.04.06 that I purchased from a gent in Canada. So
far it hasn't failed to load any DXF files that I have thrown at it.
It does however have problems converting some complicated DXF to 3D2
format resulting in an error report. It works fine on my A/B Falcon
and NOVA graphics, but won't run under MagiC Mac or MiNT-NAES. I think
the memory allocate feature in the latest MagiC might help as D/C hogs
all memory when launched, but I cannot test this.

I will be getting RayStart soon from Germany which features direct DXF
import.

I have been thinking of posting to my FTP some converted (DXF to 3D2)
files for those to use that have Phoenix or another app that accepts
3D2 format only, if anyone is interested.......

Mike

The last time the subject was mentioned (quite a while ago now - 18 months?)
the answer was no.

o> I'd *love* to have 3.5, especially with the long filename support. I
o> stopped using 2.5, for the most part, because of the lack of long
o> filename support.

Perhaps with the commercial release of CAB in the UK through SysSol, the more
widespread use of long filenames and the ability of Magic 5 to handle them,
this decision ought to be reviewed.

AFAIK though, Kobold v3.5 is about 2 years old and may not be being worked on
anymore. Any German readers know?

@= nuclear explosion oo someone's headlights are on
~:-( net flame (for sysops) <^_^> raised eyebrows

Smiley's enable you to gauge the expression/reaction/emotion of the person
you're talking to, but isn't there also a long line of abbreviations or
Acronyms that lie in wait for the new Comms user? The purpose of acronyms
centres around reducing your online time.

This list was compiled, not invented by d8^{Q

t> them.

Same situation here. The cables to the motherboard are connected to the back of the removable plate.

I've nothad time to go into this, but I have managed to file the casing down underneath the VME card and refitted the Serial 1 & 2 ports to the motherboard, with the plate hanging out the back. This works, but the plate does interfere between my parallel port cable and the monitor lead that fits into the VME card. It's not entirely satisfactory, as you can imagine.

>> If you are sending/receiving uncompressed data and want the modem to
>> do the compression you will need to set DTE (TT-port speed) to about
>> 3 times the DCE (modem-modem speed).
t>
t> I'm looking into this. The modem gives 115k2 & 230k4.

Same here again. Some makes of modem do support the wierd Modem 2 port speeds and may go up to 230k6, but the Serial 2 solution appears to be the most straightforward.

Hi Ben, on 21 Jan 98 you wrote: ...respect, brethren
b>
b> Does anybody know if there is an Atari usergroup near the Bristol
b> area?

Not to my knowledge.

But why not join forces with Colin P - maybe twist the arm of John Whalley
too and share the load between you?

At one time there was a very strong contingent of tarians in that part of the
country and I'm sure they haven't all disappeared.

The commitment is often a little too much for one person unless they are
particularly dedicated to the idea, but a group of two or three can easily
make the job a viability.

Please give it a try!

>> that this is normal behaviour, I would be grateful.

It was a surprise, untilI spoke to Dave at TUS at the last shows, that TOS 2.06 has built-in IDE support. Whether this was finalised in 2.06 rather than 2.05 is unknown to me.

>> Another question: I'm using fontgdos at the moment. I know it's old,

sp> I think it has to do with the fact that you're booting from floppy.
sp> If you manage to boot from the harddrive it usually loads assign.sys
sp> & CO from drive C...

I don't think so. I would expect this information only to be taken from ASSIGN.SYS.

Has the first line of ASSIGN.SYS been modified to read:

PATH = C:\GEMSYS\

?

If you get an STE, you don't care if it's 512K or more, since you can
upgrade the memory with standard SIMMs.

Hi Hallvard, I haven't a clue on how to make a web page. I am just a user
here. It is a good idea though. It is time I learn to create page.
There is merit to this idea, so I will monitor the response, and then
look into how to make the whole thing work. There are a number of ways to
tackle it.
Later Brian.

1509. Gnu Zip the saga continues...

Newsgroup: comp.sys.atari.st
Date: 1998-01-25 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <6agid7$55q$3@newsbell.bellglobal.com>
Source record: 109216

Well after many minutes of continuous trying, I thought I would let everyone
know that my attempts to decompress a file with GZIP or Compress TTP have
been a complete failure.

Question:
I have downloaded these sound files from the michigan ftp site, and
they are all in extended long filenames.
IE PEEWEE.SND.Z
When I download them they are
PEEWEE.SND files as the .Z is dropped.
I have tried to decompress them as above and also by changing the name to
PEEWEE.Z and then tried to decompress.

Now I haven't had any luck with a file that is non extended either
such as
HAL.Z

I can create Gzip files but cannot extract the ones I have made.
All files are in same directory on the root of drive F
I have tried in command line

F:\-d peewee.z
F:\-d peewee
F:\-d PEEWEE.Z
F:\-d PEEWEE.
F:\-d PEEWEE.SND
F:\-d PEEWEE.SND.Z
F:\-d peewee.snd.z
F:\-d peewee.snd

Also

-d peewee.z as above without the drive F reference

also tried

-d F:\peewee.z continue in this format as above.

Well I am at a loss here.
I could use arc.ttp ok
and LZH.ttp ok
and normal ZIPJR.TT

but I have never had success with either ZOO orGzip from a commandline.
Luckily I was saved by a shell for zoo, but now I am stuck.
I am not dumb just incompetent. It has all been explained very clearly to
me and I have read the docs too.

I can call up zip help, with -h but any functions such as test -t and that donot work for me.

Any other ideas? Anyone else ever got sounds from UMICH?
Would long filenames cause a problem?
I am running out of ideas. Is there another library of sounds somewhere with similar files in ZIP/LZH/ZOO/anything but gzip/. I like these sounds because they seem to come from an era I grew up with. I have the SAM accessorie and want to have all the HAL sounds attached.

I know what would happen

1)double click on gzip.
"I'M sorry Dave, I am afraid I can't"
2)double click on compress.ttp
"..It can only be ..human error..
3)double click on gzip again, type -h for help
"That is something I cannot allow to happen"
4)double click on gzip again type -t
"Are you sure youre making the right decision"
5)double click on gzip again type -d
"I am completely operational"
6)double click on gzip again -d plus file name
"I feel much better now I really do"
7)double click on ......
"GOODBYE"

I guess I want to get to operation 5 and 6:-). So that I can attach all these valuable HAL sounds from 2001 to my system calls.

Anymore help would be greatly appreciated.

Brian.

> this parameter together with a PPP/PAP connection?

You must use the latest SERIAL.STX for this to work, which is not part of
the main distribution. You can get the latest from my web page, download
MODULE.LZH for this.

Once you've installed that, with PPP you only need to activate the flag in
the Dialer. PPP takes care of the remote end. With SLIP however the remote
end must be told (configured) to use VJHC too.

It should not make any difference to ANY other properly written programs.
Only with programs relying on having 100 % CPU share (as many Zmodems do)
which is really a dirty thing to do, it should be switched off. Zmodems
often do other dirty things too, like accessing the ports directly etc.

> h> -"serial port CPX" : this is ofcourse set to 38400 bps/8 bit/no

Which is not sensible at all. But you can leave it that way, it does not do any
harm.

Are you one of those advocating violation of well-established standards ?
IIRC the standard of using max. 80 characters a row is even required by
the mail RFC. Not even Microsoft tried to challenge this.

I have no problem reading this format. But editing a reply containing quotes
is a pain, and recently already a few times I did not bother anymore to reply
to personal mail formatted in one line a row..

You have even less of an idea whether the reader will be able to wrap the
lines. So lines not exceeding 80 characters are a *must*.

> Any decent FidoNet reader realizes this and wraps lines
> according to your settings. Why should Internet software be any different

Silly question. Summer's warm, which is nice. Why should Winter be any
different ?

> I personally find any reader that doesn't wrap lines, or at least allow you
> to scroll them, unacceptable.

Ok, then maybe you find my mail reader unacceptable. But when you write some
mail to me, then you're interested in me reading it. Which I won't because
it's not easy with my reader. If you like writing in vain, sure, go ahead.
If you want me to read and reply, use a decent format, which is the one asked
for by the RFCs for instance : 80 characters a row, not more.

> If someone sends 132 column lines, and you're
> limited to 80 columns, that's 52 characters per line you can't see. If they
> send entire paragraphs unformatted, you miss even more. Unacceptable.

I do not care about people who think they can enforce their own standard.
They'll fail, that's for sure. If I don't get their mail it's not my problem,
but theirs.

Cheers Peter

PS.: Next time I send you mail, I'll talk into a microphone and record my
voice, and send you the sample file. Since a mail-reader that is not
even capable of playing the sample is unacceptable. And, of course
I'll use my own sample format, because it's gonna be the best of the
world. Any mail-reader that is not able to read that format is unaccep-
table.

I do not quite agree. The likelyhood is small, true, but it can be done,
if there is someone with a lot of time, and who is ready to do a hell of
work.

> Did you ever look at the complexity of this program? Depending
> on the platform the binary has a size of about 10 MByte. This is more
> than the main memory most Atari users have.

So what ? 14 MB is a Standard size which is used by many Falcon users,
and many Falcon and TT users have RAM sizes up to 128 MB, maybe even
beyond. Memory is cheap nowadays, and nobody meant that everybody needs
to be able to run and even compile it.

Apart from that, nobody said that only the full beast would be of interest.
I'm sure the binary can be shrunk a lot by putting aside some very memory
consuming parts, like the Java bit.

> And for a Linux version: Do
> you have Motif 2.0 for your Atari? Surely not. But as far as I can see
> Motif 2.0 is required in order to port Netscape.

No. Motif is needed for a straight recompile. But we were talking about
porting it, and why should nobody be able to replace the Motif bits by some
other X library ?

> I think you haven't yet thought about very basic things required for a
> port. It needs more than the sources to do this. And remember: Java
> sources (at least for Java 1.02) are available from Sun and there is
> still no Java port for the Atari. The situation will be similar with
> Netscape.

It appears there will be a significant difference. For obtaining the Java
stuff from SUN, one has to sign a license agreement, which in some aspects
is rather strict. I'm sure this was one of the key factors that delayed
the Java port for so long. Contrary to this, according to recent news, the
Netscape source code was intented to be truely free.

Due upgrading and lack of space I have the following equipment for sale in
the UK (Reading):

1* >FALCON030 32BIT/32Mhz UPGRADE TOS4.01 4mb RAM 60mb HD 1.44mb FDD
, DSP needs adjusting due to upgrade.
Ideal for WP/DTP/GRAPHICS
(inc software: xboot, Pagestream2.2UK DTP plus loads more)<

>plus VGA Monitor for use with Falcon inc monitor adapter<

250 pounds ono
(or 300 pounds with the items listed below)

2* >DEKA2 Detachable Keyboard Extender (allows connection of virtually
any 'PC' type keyboard to the Falcon or ST, via adapter)<
50 pounds ono

3* >VIDI-ST 12bit all-in-one Video Grabber (allows grabs of still
/Full motion video on Falcon in True Colour)<
50 pounds ono

4* >Falcon Truepaint (boxed with manuals)< 20 pounds ono

For ALL items 1-4, I ask 300 pounds ono.

I'm open to offers on these prices.

Please email Dave at stu95djn@rdg.ac.uk to make an enquiry/offer for any
of the above. First come first served.

PR>
PR> Silly question. Summer's warm, which is nice. Why should Winter be
PR> any different ?

The point I was making was FidoNet is very old technology, and you'd think that as we progress we'd become MORE flexible, not less.

PR> Ok, then maybe you find my mail reader unacceptable.

I didn't even know you wrote a mail reader. Or do you mean the one you use?

PR> I do not care about people who think they can enforce their own
PR> standard. They'll fail, that's for sure. If I don't get their mail
PR> it's not my problem, but theirs.

Maybe they don't know what they're doing, or maybe their software is the problem and not them. They may have something useful to say, which would make it the problem of everyone not equipped to handle >80 columns.

PR> PS.: Next time I send you mail, I'll talk into a microphone and record
PR> my voice, and send you the sample file. Since a mail-reader that is

PR> course I'll use my own sample format, because it's gonna be the best
PR> of the world. Any mail-reader that is not able to read that format is
PR> unacceptable.

That's silly. We're talking about simple text that just happens to be formatted to more than 80 columns. And GEM horizontal scroll bars are not exactly new technology. I don't see what the problem is. Even if we all agree that 80 columns SHOULD be the max, and we should ALL strive to achieve that end, a reader should STILL be able to handle messages from those who do not adhere to our agreed upon standard. Again, they're not necessarily flaunting our standard. They could be ignorant of the standard or their software could be poorly written. Heck, it could be neither. A CR could have been lost somewhere along the line. None of those conditions necessarily equate to their message being not worth reading.

Yes, I thought that was weird too, since the Mega STE always had SCSI
support. Unless maybe Atari had hesitated between IDE and SCSI at one point,
which I doubt since apparently 2.05 does not support IDE. Well, it works
fine once AHDI is loaded.

Yes, I have changed that, but it just seems to think that the boot drive is
A:, since that is where the fontgdos.prg is loaded from.

Well, never mind...

Probably, but check your monitor cable. Pull it out and look at all of the pins, make sure they are straight, then plug it back in and try it again. If you feel adventurous, and know what you are doing around electricity, pop the case on the monitor and look for a fuse that is blown. Replace it and try the monitor again. Chances are it will blow again, but sometimes you get lucky.

Date: 1998-01-25 00:00:00 UTC
From: Chris Whitelock <chrisw@newton.dialix.com.au>
Message-ID: <885688684.335260@newton.dialix.com.au>
Source record: 109246

I am interested in people's thoughts on Texel as I am contemplating buying
it. In particular:
- which version of Excel does it compare to?
- can it load and save Excel-format files/worksheets?
- does it support 'workbooks' and external file links?
- what are its printing capabilities (I have NVDI 3.02 on my Falcon under
Geneva)? ie. can it size to fit, print portrait or landscape, etc.
- are there keyboard shortcuts which are the same as Excel's?
- is it available in English?

I have accessed the web pages of its distributors, but (unfortunately) my
German is very very limited...

Thanks

Hmmm, obviously the value is unsigned 16 bit (65534 that is), but is inter-
preted as signed 16 bit. If I recall correctly the HSMODEM docs state that
the corresponding Fcntl call uses an int variable instead of an unsigned int.
I need to check this.

> Is there an error
> in the configuration text of HS modem (should the buffer size be

> worry about a buffer this size?

No you don't. Buffer sizes up to about 16 kB may be sensible in very special
cases, with weird software and using the port at it's uppermost speed.
Normally I won't set the buffer to any size larger than 4 k. I consider
buffer sizes larger than 16 kB a waste of memory.

This is not true. I know of at least one that is still commercially available.
There have been about a dozen different models of Ethernet adapters in the
history of STs, maybe you'd succeed getting a second hand deal. Software may
still be the problem, as I suspect the PCs run Windows which normally does not
use TCP/IP on the network.

I'm a bit disappointed with the lack of responses so far though Hans!

I'll add a bit more. At the moment it is not the solution that
concerns me but the amount of response. After all, if there are no
potential programmers out there then having a discussion on anything
else is in itself pointless.

Nope. I tried to word the posting with as few words as possible, on
the basis the more I said, the more likely it would be I would say
something I didn't mean or which could be misunderstood. ;-)

What I'm interested in atm, is how many people out there would like to
start programming and *would* seriously consider it, if there was a
supported compiler.

I've no doubt we'd be hard pushed to find anybody who knows more about
STOS than yourself Tony but I have good reason to be biased toward C
aside from any obvious reasons. It is the only language for which
source code exists freely.

It's almost certain your ISP has a brain dead news server. It might be
so brain dead that it only counts lines and looks at the first char on
each - so you might fool it by with some carriage returns, or better,
by fooling it into thinking some other character is the "quote" by
changing the first few to something else.

It would be interesting to know how it treats MIME. It would not
surprise me at all to find it lets html stuff straight through!

I didn't take the time to see who asked this question, but it's still
worth answering. If I understood right from Oregon Research's webpage,
they are discontinuing development of the Lattice C package. However,
there's not mention, if I missed anything or not, of updates to the last
or latest version.

>>> 3)
>>> Other languages are irrelevant. Not because they are "irrelevent" but

Not just C, but also Basic, Pascal, and assembler. There's plenty of
websites to visit for programming help.

Remember Steve Yelvington who wrote the little FAQ on how to program the
ST to use the modem port? He's still around. However, that little file is
a bit dated. Any updates to it?

>I'll add a bit more. At the moment it is not the solution that

>else is in itself pointless.

Maybe a FAQ on where to find all the resources you need would help, as
well as updates to those older files we come across that are not much
help. Source code helps, but some of it doesn't have enough documentation
and/or remarks in the source.

>
>If you've installed the Extras when you installed MagiC you'll find the clock
>in the extras folder (quite deeply nested)...

... and you can move it about. This may not be immediately apparent to
english users as I've never seen any docs on it. I found by accident
you can drag an edge then shrink the opposite edge. Eventually you end
up with it where you want. Click on the clock to ensure it is the top
window then hit ctrl-s (iirc) to save the position and size. ctrl-u
terminates it I think, should you ever want to.

If you're lazy just hit ctrl-s then hack the file it creates
(clock.inf) in the root directory with a text editor. The X & Y
co-ords go from 1-10000 not rasters.

There's probably a way to turn the chime off but I don't know how.
More hacking of clock.inf will no doubt get you there in the end, if
you're really desperate. Or just try the other 24 ctrl combos but
could take 25 hours to find out that way!

On the other hand someone could look in the german docs and tell us!

As far as I know, Oasis does not have the possibility of setting a
fixed mail exchanger. It takes the name of the mail exchanger from the
recipient's address, as Okami does when the variable "mail.exchanger"
is not set.

>Whether POPwatch actually uses that bit I don't know
>(Gary?). *AIUI* POPwatch always uses your mailhost anyway rather than
>trying to connect direct to the addressee's site. NOS does try to go
>direct if possible, IIRC.

That's correct. So it can be easier, and faster, to choose a fixed
mail exchanger, ie mail server, to send all your mail messages,
instead of having to connect to different mail servers for each
message individually. Which is what NOS does if you fill in nothing
for "mail.exchanger".

> No, that's not what I'm saying at all. I'm saying it has an effect on SERIAL
> performance.

Ah, I see. In this case this must somehow be related to MagiC as the
hard disk driver doesn't do anything related to the serial ports. And
this is surely not a problem most MagiC users have. I know a lot of
users that run MagiC and background DMA all the time and that regularly
use their serial ports: no problem. On the other hand I heard of a few
users with a MegaSTE (or ST/STE) that had problems with their serial
ports, indeed, when running background DMA. This was an effect that
didnt't seem to exist with old versions of MagiC.

Yes, this should work fine. That is, if it's really the DMA chip that is
causing your SCSI problems.

Kind of a waste to download 4 Megs of data just so I can view a 37k single government page! :-(I understand most of the 4 megs is font data, but there could be a way to extract an IMG from the PDF file. Not that I have any idea how to do it, but it must be possible.

I'm not so sure. I tried replacing the 256Kb SIMMS in an Amiga 1Mb upgrade
and it acted as though they were still 256Kb SIMMS. If they act the same
way, they should act as though they were 1Mb, rather than 4Mb.

On my set-up it's hiding at the following location:

\GEMSYS\MAGIC\EXTRA\UTILITY\CLOCK\CLOCK.APP

If you've done a full install, including the extras, it should be at that
location.

I find that I need to turn STing off when I use a comms prog. It seems to
muck up the data sent to the modem it it's on.

> h> The "delay" parameter is set at 60 (I have no idea what this actually
> h> delays though).
> Me neither! (g)

I'm probably going out on a limb here, but I thing the delay is the time
between interupts, that's if STing is (partially) interupt driven. I've
tried altering the delay from 10 to 900 and it seems that it's more
responsive as the delay gets smaller. I used to have it set at 10, but
since I'm now using Magic, I've set it to 50. That way Magic seems to
get more time.

> h> -"sting port setup CPX" : I'm a bit confused about this module. I've
> I think that you only need this module if you've a local network. Disable it.

I don't know about this one for certain, but it has my IP address, which
is fixed, my MTU which I think it the maximum packet size sent by STing,
and the PPP/SLIP setting. It's basically mirrored from the dial script,
but it's useful if I have to do a reboot while online.

> h> -"sting protocols CPX" : I don't know which values I should insert here
> Ditto.

I've ignored most of the settings in this. The only ones I've altered are
the GMT lag (ICMP) which I've set to 0, and the nameserver and domain
(resolver). The nameserver is Demons DNS and the domain I've set to
my-ste.demon.co.uk although I'm not sure if this is correct. The domain
entry doesn't seem to make any difference so I'm leaving it as it is.

> default for TOS according to HSmodem.

I don't use this one. HSmodem has 4Kb buffers with the DTR left on. I don't need to set the speed since it's hardwired to 38400, and since TOS is kind enough (?) to set to port to 8N1, that's how it's left. I've not needed to turn on the RTS/CTS as yet, might try that later to see if there's any difference.

>STOS than yourself Tony

Hey there are a list of people who I turn to for help in STOS mate, quite regularly :)

>but I have good reason to be biased toward C

Your a student then..?....sorry couldnt resist :)

>aside from any obvious reasons. It is the only language for which
>source code exists freely.

Its this bit I hate and will always argue (in the nicest possible way), your statement is absoloute rubish!

STOS Has over 35 dedicated diskmags full of tutorials, how to's articles, idiot guides and source code, check out the stos file site to see them at http://members.aol.com/phansoft/Index.htm

STOS Source code can be found in any PD Library in the UK and EASY outnumbers C meg for meg

STOS is still under development , still gets new versions, expands and becomes more compatable every month, get the latest versions of the stos prg (not full package) from http://www.users.zetnet.co.uk/jacquesa/

GEM? although I hate gem :(there is now a add on that allows you to access it, and all that goes with it, Internet and modems, check out paul jones the hisoft AC writers page for all that, http://www.users.zetnet.co.uk/pjones/home.htm

STOS has its own file site at http://members.aol.com/phansoft/Index.htm that contains all the

extensions and masses of source code,

STOS has a mailing list with STOS programmers from around the world,
people would be suprised at some of the people on there new and old
names from the past:) check out the stos faq for more details at
http://www.users.zetnet.co.uk/users/paxton/stosser/nov_stos.htm

COMPATABLE, I just released a new version of Diamond Ice (game) that
runs perfectly on TT's and accelerated Falcons (tested under nemesis),
just run it and thats it, a program that runs on every machine tested,
and properly, must be compatable..

Theres a lot more that can be found in the STOS FAQ that includes
input from the original authors of STOS, Show me an ATARI specific
language that has more support than this,

Please don't say C is best because... and not expect a response :))
you know me better than that swampy :)

>potential programmers out there then having a discussion on anything

I see you are interested in getting people to join the small band of atari programmers and start learning.. well thats a big job mate, its hardly the platform to attract wannabe programmers is it,

This is admmitedly where C has the advantage over any other language, people can get an ATARI and learn C and then go to other platforms, simply using us as a stepping stone, I have seen this happen over the years, we all have, we can't stop that, but if we can get some decent software off them before they go ?...Plus even the above is getting thinner as C++ and visual C takes over, so we arnt even getting the users anymore :(

I think you would get more joy and more programming done by re-awakening existing programmers, theres a lot of people out there who can.. but dont any more :(I mean look at all the people in c.s.a.programmer and in here who say they program and seem to know enough to prove they can.... but what are they making ? Nothing, well not for ATARI anyway......

Get existing programmers busy on the ATRAI is what I say.... how ?... dunno, have a compo or summat, some incentive, get them off there bums :))

u> that didnt't seem to exist with old versions of MagiC.

I wouldn't be surprised if it has something to do with the fact that I'm running in 768x480xHC, either. That is already pretty taxxing on the system. I'll bet if I went to 16 colors, my performance would improve, even with background DMA on. I may try it one of these days (though only as a test, because I'm not going to give up 768x480xHC for surfing). I'm guessing a Nemesis upgrade would help, too.

This thread is echoing a subject I proposed some months ago
on a local network. I can't agree with this idea more
strongly. Someone should force the guys to get together, for
their own good, and ours :)

Their cannot possibly be a big enough market for all of
them, and because of the small market, the element of
cooperation NOT competition is what's needed.

Get the right machine at the right price, with a core of
decent INTEGRATED s/w from the likes of
Seiwet/Rottengatter/Clauss/Little etc etc and who knows a
minor miracle Atari rebirth ???

Does anyone know if it's possible to connect an Eizo multisync monochrome monitor to a Viking Moniterm card? The card is made for the SM194 monitor. The Eizo can handle both analog VGA and ECL signals has these frequences:
H. scan: 31.5KHz, 48 - 55KHz and 64 - 78KHz
V. scan: 55 - 80Hz

It works fine on a TT in TT-high res, but I don't know what kind of signal the Viking card sends...

1567. Registered Shareware Programs!

Newsgroup: comp.sys.atari.st
Date: 1998-01-25 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19980125164700.LAA22837@ladder01.news.aol.com>
Source record: 109283

THE COMPUTER DUNGEON is proud to announce that we have added more Full Registered Shareware Programs to our growing list of products. Our Shareware listing includes:

Running from RDT Software
Mole Mayhem from Croftsoft
Trader II from Croftsoft
4 Game Pack from Cybernation
Deadland '96 from Justin Bloggins
Curse of Azriel from A.A. Covell
Heat Wave from Mikael Lundberg

Each of these programs are fully registered (which means that the authors receive payment for their work) and come with printed documentation.

Check out our website for more information on these programs at:

http://www.mcs.net/~isis/dungeon/dungeon.htm

More full registered Shareware programs will be offered in our listings as soon as we receive permission from the authors to distribute them.

The Computer Dungeon is proud to offer these high quality programs to Atari users everywhere and believe that you will enjoy each and every one of them. Your purchase of these programs not only makes sure that the authors receive payment for their work but helps support the Shareware marketing system and gives incentive for authors to continue to develop programs for the Atari platform.

NOTE: if you are an author of an Atari Shareware program and would like The Computer Dungeon to distribute your program here in the U.S. and North American, please contact us at either our website or Email us at "ComDungeon@aol.com"

Thank You for taking the time to read this and we look forward to helping you with all your Atari needs!

Al Horton
The Computer Dungeon

Chris,

Get yourself a copy of the demo and try it. It's available in
English. I bought it when it was first availanle in English
but have been disappoionted so far. The first release I received
would not print without crashing. After several months, it was
upadted and now works. I could never get charts/graphs to work --
it always said "an error has occurred", or something like that when
trying to paste one in. It turns out, the program doesn't do
any charts on its own, although it has a very elaborate dialog
box for designing them. You need to buy ArtWorx (in German only)
to get graphs -- Texel will pass your parameters over to that
program to do it. This was never mentioned in ads, or even in the
docs. I thought I'd already bought that capability but found out
I had to spend another $100 or so to get it. There are other
problems with the program such as slow data entry under Geneva.

All in all, a very slick looking package that doesn't really hold its
own against LDW Power 2 which came out 10 years ago! If you need
number cruncing, get LDW Power. If you need nicer output, get
Texel. If you need graphing, also, get LDW.

>Thanks much,
>EJ
>.

Hello EJ,

As far as I know there are no more Atari shops in the Seattle area.
The last one I know of was Xanth Computer operated by Bud Berg, but he
has since retired. Also I can't think of any places to buy software,
but there is lots of freeware/ shareware on the net. Try some of these
ftp sites:

ftp.informatik.uni-muenchen.de/pub/comp/platforms/atari
ftp.uni-erlangen.de/pub/.files/ftpatari/LOCAL
ftp.on-luebeck.de/pub/systems/atari
ftp.ibp.fr/pub6/atari
atari.archive.umich.edu/atari
f.ms.uky.edu/pub2/atari
ftp.siliconvention.com/pub/atari
acp5.chemie.uni-kl.de/pub/atari
ftp.rhein-main.de/pub/atari
ftp.teleport.com/pub/users/atari
ftp.funet.fi/pub/atari

If you need help with repairs, let me know and I may be able to refer
you to someone. If your disk drive is bad, it shouldn't be too
difficult to replace - the drives are not Atari specific. Take your
old one out and take it to a computer store and ask for a replacement,
again, if you aren't sure how to do that email me and I can possibly
give more help. Good luck!

MagiC does no background DMA on IDE drives.
It never did and will never do.

```

Der Hintergrund-DMA ist in allen Einzelheiten in der Doku zu MagiC 3
beschrieben. Der aufrufende Task macht einfach ein "waiting for I/O".
Wenn der Interrupt vom SCSI- oder ACSI-Chip kommt, wird der Task wieder
aufgeweckt.
Die Interrupt-Maske wird w�hrend des Wartens nicht ver�ndert. Der
Interrupt-Handler f�r ACSI/SCSI ist so klein und kurz, da� das auch
nicht kritisch sein d�rfte.

Well the difference at this level wont be that big! ST-RAM access is
slower,
but not that big and DMA transfers wont involve the CPU at all anyway.
Blaming
hardware for every strange effect i stupied. Try to solve the problem
insteed.
Other people have the same effect with background DMA without an AB040
or not. Also regarding MagiC and it's FRB buffer there is a problem with
040 CPUs as it's impossilbe to locate it and mark it non-cacheable.
As the AB040 is the only 040 machine with Fast-RAM which MagiC works
with
I guess Andreas wont look at it either.

1579. looking for replay/16 cartridge

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: sunset
Message-ID: <6ahkn4$42p@snews1.newsguy.com>
Source record: 109095

I'm looking to purchase a used replay/16 cartridge with software and manual preferably near the San Francisco area. If you've got one you'd like to sell email me tkk@sunset.net

Also does anyone know exactly what sample formats the software with the cartridge is able to play back? i.e. can it play back .aiff and .wav formats?

Thank you in advance.

Well it compiled but does not work. The latest approach is to use the
Amiga version and let them do the hard work and we just change what is
needed and it looks promessing so far.

It will probably not be integreted into BM as noone has got the time to
do it and
it would probably not work anyway. BM is heavily optimized to run on a
4Mb stock Falcon. Doom will need more memory than that.

For the future of BM, nobody knows what will happen. There are some
activity now and then, but it's pretty dead now since Doug got a not
Atari related job.

I still don't see a problem. I did say that you would need ALOT of time,
but surely can it be done. Maybe not all of Netscape, but the regular
html stuff and java script. Then if someone WILL do it, that's another
question.

If we were goint to listen to you not much would be done on a Atari
at all, but fortunately people doesn't.

I can't sell it tou you 'cause I use it every day

>
> Also does anyone know exactly what sample formats the software with the
> cartridge is able to play back? i.e. can it play back .aiff and .wav
> formats?

This cartdrige is able to play at 16 bits/50 khz and every
frequencies you ould to choise but one of it problem's is its (I don't
know the word for "lenteur" in french :)) none-speed when you want it
to aply some effects....

the formats are avr (Audia visual something, the useal formats of
microdeal) and rpl (the raw format of replay 8bits)

but you can upload five to five which is a great translator beetween
every kind of sound format (aiff, iff, avr, wav and others...)

you can find it at ftp://ftp.lip6.fr/pub/atari/sounds (or musics ?)

Hello,

I suggest you to download the starter kit in some ftp (starter.tos)

then after doing this, download two in one, configure it as well you
can, it will choise the appropriate uncompress tool....
but it sounded me that the ".z" files have to be uncompressed with
gunzip, no ? maybe you may have to find it ?

Another things then I left : one times I did download some things from
umich and the files was corrupted so pearheaps it has happened to you
?

Happy new year from France and 'scuse my dirty poor english, away from
my high school

Well impatience and bull headedness wins out. After removing the rf shielding, I found a 3rd "jumper" next to the mmu (I assume.) I changed all 3 jumpers, put it back together, and it was fine.

Is there an appropriate place where (if I get to it) I can upload a text file documenting the change? Would anyone be interested?

Thanks to all.

Ed

Aha. Are there more calls like this in MagiC? Are they documented
anywhere? It would be nice if new calls would be documented so that
others AESs could support them as well, like N.AES and Geneva. I
think it's good when new calls are added if they are usefull but then
they should be documented so that they work with other AESs/OSs as
well. Hmmm... looks usefull but as they don't work with other AESs
I can't use them.

Sure, word wrap could be implemented, but it would take its toll on
the simplicity of text line scrolling, etc. Some have also requested
a horizontal scroll bar, which could actually be a simpler solution.

If, however, the text editor that the author uses, handles the word
wrap, then NEWSie doens't need to, which is where we are today, with
the exception of some (like ASH Emailer) that don't.

Message-ID: <6ah3ri$c9j@newsops.execpc.com>
Source record: 109109

I finally have my 1040STe hooked up to the net thanks to Peter's last release of sting. I have been plaged by the dialer hanging on ATZ just as described in the FAQ. The problem is I don't have a falcon so that solution didn't work, nor did the time delays suggested. What does work is to hack around in the hsmodem program mfp.prg. I used a sector editor to change the word "MODEM1" in sector five byte 76 to "Modem 1". I tried this and everything else I could think of last fall with no success, but it works with Sting now. Evidently this is a rare problem with the STe because I hear alot of you out there are using them. I anyone else has had this problem I would be interested to hear.

Now I have some questions.

What are the best clients out there for mail, news and the WEB?
Where do I get them?

I have TOS 1.06 what can I do to upgrade the TOS and what will it do for me?

Does the TCP/IP protocol in sting work with the TCP/IP protocol in windows 95 and direct cable connect?
If so can I hook a CD ROM to the ST and get to it through the connection?
(I have an older notebook PC with no CD)

Thanks again
Scott Ainsworth

1594. CRC errors with STinG and FTP

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: rosco@game-master.com
Message-ID: <6ah4i8qda1@wagner.videotron.net>

I think it was already posted that the last update to Word Perfect is
dated April 18, 1991. This does run very well on the TT and does
work in TT High (1280 x 960) correctly. It runs on the Falcon as
well, but I think it has some problems with it, and will not work
with certain accessories on the Falcon.

By the way, I have MS Word on my Power Mac at Work. The display is
buggy so I use Papyrus under MagiCMac.

Opssss... this isn't nice! So it can't output charts? What a bummer!
Regarding the price for ArtWorx it's more like $60 but I guess it's
still a bit expensive to get chart support.

Have you tried version 2? I guess it hasn't got chart support either?
It looks very nice though but that doesn't help either.

We know but he said that it even slows down the computer when he doesn't
use the SCSI port. So SCSI or not, activating background DMA slows down
the computer no matter what you do.

It's called MMX (MultiMedia eXtention).

>with DSP instructions. Signal processors have a special features like
>hardware circular buffers, bit reversed adressing (needed for FFT) and
>lookup tables for much used functions. The pentium (with or without MSX
>instructions) doesn't even come close.

You can use the new MMX instructions as a DSP because many of
instructions cover the same area as a DSP.

This is a very short description that I found at Intels homepage of
what the MMX instructions is designed to do:
"MMX technology includes new data types and 57 new instructions to
accelerate calculations common in audio, 2D and 3D graphics, video,
speech synthesis and recognition, and data communications algorithms"

Go to: http://developer.intel.com/drg/mmx/appnotes/
for more info/demo on MMX instructions/apps.

Atari Germany had a company called Reibel (Not sure if that is the correct spelling) develop VME and MegaBus ethernet adapters for the Atari Mega's, Mega STe and Atari TT030 computers, I know Atari Unix System V.4 has the drivers built in to use this, but I've heard there were drivers for TOS TCP/IP as well as IPX drivers for TOS, does anyone know where the drivers are for these cards, I have 15 of them and if I can find the proper drivers I would be willing to sell them to anyone interested.

There was indeed an update and I saw it. I never received any updates
past 1988 and a someone gave me the 1989 aug update. I remember running my
1989 version on a TT to test it when someone showed up with the new version.
IT handled the NEW 640*480 and 1280*960. Otherwise it would work in Normal
ST modes on the TT. I never did try it on the Falcon, though I am told it
works with the update.

Disconnect the keyboard from the computer. If you hear a continues
'ringing'
sound most of the computer is still alive. Also check the drive led (on
the
keyboard) (when connected), if it's flashing (very faintly) most of the
computer is stil working.

Succes, Hans

1608. Animated GIF utilities

1613. Newsie/Magic Scrolling Bug

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: lockwood@freenet.calgary.ab.ca
Message-ID: <6airnc$k6e@ds2.acs.ucalgary.ca>
Source record: 109129

When using Newsie 0.84 under Magic 5.11, I find that the program crashes when I attempt to scroll through a longer message using either the arrow (up/down) keys or by dragging the scroll bar. Clicking in the scroll area appears to work alright.

When it crashes, I get two bombs and a message stating that it is a 68000 exception, Error -#69.

This happens on or offline (I use the latest Sting in PPP config) on my TT030. Under TOS 3.06 this doesn't happen. Following some of the other Newsie threads, I have deactivated Background DMA in HDDRIVER (7.12) and I have checked that Newsie is NOT using Fast Ram.

Any ideas?

Thanks,

1614. PRESS RELEASE - THREE NEW ATARI CD-ROM COMPILATIONS

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: Steve Delaney <sdelaney@zetnet.co.uk>
Message-ID: <6aiucf$g8i$1@irk.zetnet.co.uk>
Source record: 109130

```
**********************************************************************
FLOPPYSHOP, ABERDEEN
14TH OCTOBER 1997
PRESS RELEASE - TWO NEW ATARI CD-ROM RELEASES
**********************************************************************
Apologies for the late posting of this item. I have been unable to
access Usenet for several
months.
**********************************************************************
*
```

Floppyshop are pleased to announce a "Trans-Atlantic cooperation" with Suzy B Software, America's leading supplier of Public Domain and Shareware software. The result of this will be three CD-ROM compilations of the best Public Domain, Shareware and Freeware software ever produced for Atari computers, now being made available in the UK and across Europe.

The first two titles are already completed and will be released at the Atari Shows in Birmingham and London on 18th/19th October 1997. The third title is as yet unnamed and will be available around the end of this year. All three CDs have been compiled by Michael Burkley, proprietor of Suzy B Software, probably best known as "The Unabashed Atariophile" of Z*Net, ST Report and Atari Explorer On-Line.

When Floppyshop announced their first CD-ROM title, DTP+Graphics, they did not realise how large a task they were undertaking. Two more Floppyshop "branded" titles are still in the pipeline but the sheer amount of time needed to create a quality (rather than shovel-ware) production has meant these will not now appear until after Christmas.

Like Floppyshop, Suzy B Software take pride in their work, cataloguing ever= y program on the CD. What's more "The Unabashed Atariophile" knows what he's talking about, unlike most CD compilers. Michael Burkley lives and breathes Atari, and his attention to detail rivals only our own! When selling a Suzy B CD-ROM we can be assured our customers are getting a good deal. That's why we were so keen to work with Suzy B's.

Floppyshop will handle the manufacture, packaging and distribution of these titles within the UK, ensuring their usual fast and efficient service on all orders. Suzy B Software will do likewise for North America. Distributors are likely to be announced for other European countries in due course. In the meantime, either title may be ordered directly from Suzy B's or Floppyshop for immediate despatch worldwide.

The first two releases are detailed below. A further press release will give information on the third release nearer the time.

****
Suzy B's Atari Software Treasury #1
****

When it was originally released, this double CD set was hailed as the best compilation of English language Atari software to date. The downside was the price tag at over 50 pounds. This re-release of that popular CD includes the complete contents of the original 2 disc set archived to fit onto a single CD at the much lower price of 25 pounds plus P (UK 2 pounds, Europe 3 pounds, ROW 4 pounds). Much of the software on this CD is American in origin and has never made its way onto the Internet, BBSs or PDLs. Categories include Games, Utilities, Children's Programs, Falcon software, Databases, Comms software, Screen Savers, Picture Manipulation Tools, Financial Software, MiNT Utilities, Midi Files and much more besides, with each program catalogued on the disc. An Aladin's Cave of Atari software at an affordable price. No Atari CD-ROM owner can afford to be without it!

****
Suzy B's Software Treasury #2
****

With 9 years' service to the Atari community, Suzy B Software know more about PD and Shareware than most. This followup CD-ROM contains almost 1 Gigabyte (when uncompressed) of the very latest Atari software. The CD contains everything which could not be squeezed onto the first compilation as well as all the new software they have collected in the past three years. As with their first CD, much of the software is of American origin and has not received widespread distribution outside of the States. An absolute gold mine of top quality Atari software, this CD has the contents of over 1400 floppies! Available now from Floppyshop for just 25 pounds plus P (UK 2 pounds, Europe 3 pounds, ROW 4 pounds).

Payment should be by way of cheque or PO made payable to Floppyshop. Credit card (Access, Visa, Mastercard, Eurocard) are also welcome. Overseas customers not paying by credit card should ensure payment is in UK funds and make payment by International Money Order, cheque drawn on a UK bank, Eurocheque, Post Giro or Canadian Postal Order. Send/Phone orders to:-

> (user.yel) into oaddr.inf format?

I did it with Everest and some search/replace operations (plus a
little manual editing) as the Okami address book has a simple ASCII
format. You just need to strip out some stuff (mainly redundant spaces
and the mailing list flags) from the Oasis file and make sure your
commas are in the right places.

I've just checked again and you're right. Don't know where I got the
idea from that Oasis put the mail exchanger in its .WRK files.

>>Whether POPwatch actually uses that bit I don't know

>instead of having to connect to different mail servers for each
>message individually. Which is what NOS does if you fill in nothing
>for "mail.exchanger".

For anyone who is still using NOS with Oasis, I seem to remember that
it is possible to force NOS to always use the default mail host rather
than going direct (there was a discussion in demon.ip.support.atari at
one time). You set one of the timeouts to zero, IIRC, so that it
doesn't bother trying the direct connection. This might be useful
information if you want to speed up your mail connections and don't
have the option of your mailer doing what Okami does.

Cheers,
John

1617. specifications

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: jim <jim@studio9.demon.co.uk>
Message-ID: <34CD02E9.FD2509E8@studio9.demon.co.uk>
Source record: 109133

I'm constructing a web site for atari midi musicians, working title 100% TOS Atari Music Resources or similar. This will be a no nonsense site with lots of FAQs, links to shareware/freeware, general atari links and some limited technical support. Aimed at the midi musician new to the platform I hope to collate all the information and resources re atari+midi together in one place. Here is some copy I have already been working on ...

Congratulations! Atari and music go together like cheese and pickle. Chances are you picked up an STFM or STe for a bargain price. But don't

be fooled you have an extremely capable MIDI workstation.

Here at Atari Music Resources we are interested in celebrating the resilience
of the Atari platform to rapid changes in technology and enjoying the creative productivity still to be had from our stalwart of MIDI sequencing.

... and so on in a non-jingoistic non-technical fashion

I'm sure there will be some more postings as this project gets underway but for now I am looking for **accurate** specifications for all atari models; ST, STF, STFM, STe, Mega ST, Mega STe, Falcon, TT. From my own knowledge I think I may have some inaccuracies wrt Mega models and TT in particular.

TIA,
Jim.

Hello Atarians,

Alex Yu, of ATY Computers in Oakland California, is back and in business again after being robbed at gunpoint and losing nearly everything in his shop, including PC, ATari computers, parts, chips, diagnostic tools, etc. Thanks to the kindness of some fellow Atarians in the form of donations of parts, $, etc., he was able to open up a shop at a new (and hopefully safer) location. Alex did my Nemesis installation, Steinberg audio mods, and has been a friendly source of info for me. If he has done any work for you, or has been helpful in other ways it may not be too late to help him out. He asked me to post his new address and phone info. His email remains the same.

>The robbery was a terrible thing. Yet I feel a lot better now knowing
>I have so many caring customers, no I mean friends, out there helping
>me get back on my feet. All your warm encouragement and help will be
>remembered for the rest of my life. I have since moved to a safer
>location and here is my new address and phone number:
>
>ATY Computer
>320 10th St., Suite 130
>Oakland CA 94607
>(510) 836-2309
>
>my email is still the same: atycom@pacbell.net or atycom@infinex.com

This incident was referred to in posting #113139, which was rather long so I won't repost it. I'm very glad to see that Alex didn't just give up. For PC and Atari needs, give him a call!

Thank you for your attention... ;-)

1619. Help! Cardfile Path???

Newsgroup: comp.sys.atari.st
Date: 1998-01-26 00:00:00 UTC
From: willard@headwaters.com
Message-ID: <6aj0t2mlf1@newsbell.bellglobal.com>
Source record: 109135

Does anyone know how to set the cardfile.cfg file to point it to a sub-directory?? I was going to edit it but it appears to be a binary.

Got some printer questions too!

Any help appreciated!

Willard.

C> a converter (eg: Imagecopy 4, GEM-view) to convert it.

But most games etc are *not* GEM applications. AFAIK, the only solution is
something like the 'Ultimate Ripper' cartridge (there may also have been a
software-only variant of this). You may also need to make up an adaptor for
your serial port that shorts together pins 20 and 22 (ring indicator) at the
press of a switch to halt the game in progress so that you can grab the scree

The hardware used to be available from Power Computing, but you may only be
able to get second-hand versions now.

Regards
/Peter/

m> fd-235 hf, which I believe can be made to work, when I get time.

When you do, make sure that you plug in the 34-way Shugart cable the opposite way round to the way it is on the PC. Also, some SS drives (Chinons?) had an interface board between the Shugart bus and the drive - you can safely scrap that. You may need to fit longer or extra spacers on the 3 fixing bolts and the stand-off pillar, because the old drive will almost certainly have been half-height where the new one is likely to be one-third height. Also you may have to cut out part of the top casing disk slot to clear the new eject button.

Is it really longer than, say, the Scooter-PCB manual I translated? That ran to some 140 pages, though with a lot of images (which all had to be re-done in English!). But see my posting about HP_OPTIMIZE in this group.

m> power-up the light on the drive does indeed come on.

Just a guess, but yours might be one of the very early Ataris that only had part of the operating system (TOS) in ROM and needed a special boot disk to load the rest. I judge this from the 'M' suffix and mention of external floppy drive - I presume there is no internal drive? In that case it's likely that this drive is single-sided (360k). Try switching on with no disk in the drive and waiting a minute to see if the desktop (with 2 drive icons) appears. If not, then either I'm right or there is a fault. I am not certain whether this type can be upgraded to later TOS versions -- all later versions with TOS only in ROM can.

Mike,
I saw your post regarding converted DXF files, and i would like to see some of those 3d2 files you've converted. What is your ftp site??
I agree that Rosetta was pretty pathetic attempting to convert any DXF object file of any detail.
I have a library of 3d2 files from disks, BBS, public domain, etc, but I am always looking for more.
Although I haven't dabbled too much lately, I used the 3d2 files for Phoenix2 and Chronos.

Thanks very much.

>thanks all
>.
HI!
the only things I can think of, and this is for all midi devices, is to
make sure the correct midi channel is set on the recieving unit, also any
'Protection" should be off. and SYSEX enabled. For example, on an old DX7,
you have to do all those things., the same with an FB01. The only thing
I am unsure about are Roland instruments which require "handshaking"
proticols.

This cannot be unless you've switched the corresponding port to active
permanently. Don't do that. Go to the "Port Setup" CPX and switch it off
and save.

Still, if your setup "mucks up the data", then the comms program is at
fault, because it ignores the locking of the serial ports done by STinG.

>> h> The "delay" parameter is set at 60 (I have no idea what this actually

50 is a sensible value for a smaller machine, like the 68000 based ones.
For TTs there is no reason to not use the 10 ms setting. In fact, the use
of 10 ms is required if one want's to use the whole bandwidth offered by
Ethernet.

>> h> -"sting protocols CPX" : I don't know which values I should insert here
>> Ditto.

Don't change them unless you know how TCP, UDP etc. work.

No. You're confusing a buffer and a cache, which are completely different
things. What you say is true for a cache, but not a buffer.

> What about send buffers? Shouldn't they generally be low (1 or 2k)?

Yes, they can be a bit smaller than the receive buffers.

Quite many ISPs configure their news server this way nowadays, so I don't
know if it's a good idea to just call it braindead.

It might be
so brain dead that it only counts lines and looks at the first char on
each - so you might fool it by with some carriage returns, or better,
by fooling it into thinking some other character is the "quote" by
changing the first few to something else.

I believe they can be fooled by using different quote characters.
My ISP's can be fooled this way at least ;-)

XCONTROL.ACC can be found on my web pages since a couple of weeks now.

> Another user of course had HS modem all wrong when he copied it into the Auto
> folder. Luckily this is what users groups are all about:-).

This is a point where people err more often. However, it's all in the HSMODEM
docs, and I don't see the point in writing it up once again for the STinG docs,
since, if people managed to ignore the HSMODEM docs, they'll do the same with
the STinG docs.

> my 520ST working just fine with TOS 1.0. Some people didn't know they could

ARGH! I was replacing the internal 40M HD with a newly purchased 2G HD.

After having some problems, I returned the original 40M HD.

Now whenever my system boots as soon as it reads any disketter (Floppy or
Internal SCSI or external ADSI(sp?)) the system either lock or I get
multiple bombs (sometimes I just get the top of the bombs).

So I can boot up my system to get to the desktop if I have no diskette in
the drive (A) and by pass all the HD (disconnect them all).

But if I double click on the floppy drive I lock up.

I have a 2M ST RAM, 16M TT RAM, TT030 with CaTTamaran.

I've tried to boot from the Internal HD, Floppy the External. (The
external is fine as I book with it for my STE which 'm using now.) But
I'd really like to get my TT going again.

Originally, when I booted I use to see ADHI 6.061 start before the bombs
and the system would lock up. But now I don't even see this.

Anyone have any ideas? Please, if possible reply to me directly at

>seen a posting in it.. dead as a dodo, you can post to it, they wont
>bounce, but they wont appear either, I don't think anyone knows..

If I remember correctly this was a moderated group and after a long
period with almost nothing being submitted to it the moderator
(someone at lexicor software? or was it Annius Groenink the Edith
guy?) asked in here if anyone wanted it and the original .binaries (or
was it .software?) group. In the absence of any interest whoever it
was decided to close the groups down, so they shouldn't actually be
active. To post in them the message had to be approved by the
moderator and there isn't one, so they just disappear into oblivion.

This must have happened since January 1995 as that's when I first got
on the net and I remember the closure notices some time afterwards.
There was an attempt within the last 18 months or so to set up a new
unmoderated binaries group in the alt hierarchy but I think this died
the death as most providers didn't carry it.

Cheers,
John

I'm looking to purchase a used replay/16 cartridge with software and manual preferably near the San Francisco area. If you've got one you'd like to sell email me tkk@sunset.net

Also does anyone know exactly what sample formats the software with the cartridge is able to play back? i.e. can it play back .aiff and .wav formats?

Thank you in advance.

Yes, on a message just go in the "file" menu then hit "save to..." then
"add only".

oaddr.inf is an ascii file that you can edit by hand.

And please, RTFM... ;-)

Has anybody (probably in the UK) apart from me noticed these Atari logo T-Shirts cropping up on TV and the street?
Must be a cool brand now. What's really going on is the trendy clubber Playstation crowd need to say they played Pong when they were kids now video games are fashionable. Still though, it's a longshot, but it would be great if some Falcons/Hades/Milans were sold off the back of this. You've got to say it's remarkable. I've never seen a brand sell itself posthumously! Still the Atari logo really belongs on computers, nice as it is.

BTW, has there ever been an Atari clone with a Power PC chip? I heard of a Mac/Amiga dual OS PPC out of Germany. And if not, why not??

I purchased the last WP upgrade (last day that it was available). It
does not have provisions for the higher screen resolutions. First Word
Plus 3.0 or later does support the higher screen resolutions. (I prefer
1st Word Plus to WP even though the former has more bugs) Neither
program can hold its own against Microsoft Word! (I first used a Mac
version MS Word on a 4 Meg ST running System 6 with Spectra GCR)

No, this is not true. Hard disk background DMA doesn't use the blitter.
It's the DMA chip and no other chip that is responsible for the data
transfer.

g>
g> Then make a counter-proposal. RFC 2026 explains how.

I doubt very much if I would get anywhere. And frankly, it's not important enough to me to pursue. What I care more about is having a reader handle any amount of columns you throw at it, and I already have such a reader.

>> >Whether they should or shouldn't, the fact is that many DO. And thus,
>> >readers should be able to handle them.
g>
g> That I would agree with. Be strict in what you send, and liberal in
g> what you receive.

That's been my point throughout this thread. We got sidetracked on the SO-RFC 1036 issue, but my main beef is readers that don't allow you to see >80 columns. I still don't like the 80 column line restriction, but that's not nearly as big of a deal.

N> And Usenet is a GEM only 'technology'?

We're discussing two different threads here, and they've gotten mixed up.

The "technology" comment was referring to was the technology of
sending/receiving/reading messages. That was for the thread about if there
should be a restriction on the length of lines.

The "GEM horizontal scroll bars" comment was in reference to certain readers
specific to Ataris. That was for the thread about whether or not readers
should handle lines >80 columns, regardless of any restrictions noted in the
thread above.

N> The problem is that some newsreaders are broken and allow people to
N> send arith lines >80 chars out into the big wide world.

Agreed...that's why a reader should handle >80 columns.

N> The problem is that of not being able to read it.

Thanks for agreeing with me. :^)

W > to a sub- directory?

I'm not sure about this, but I do know that you have to trash the
old .cfg to change the directory you are running from. Save the old
.cfg as a different name, and re-configure Cardfile. No reason it
shouldn't run from a sub-dir.

Re: _Word wrapping in Readers_, Peter Rottengatter wrote to All on 27 Jan 98:

PR> That point I was making is that Internet happens to be this way, and
PR> there is no easy way around it. 99 % of all mail readers want in some
PR> way 80 characters a line messages. Simply starting to ignore this
PR> means pissing off all the users of those mail readers.

I have no problem with mail readers conforming to a strict policy of not sending out any lines longer than 80 columns, particularly after being informed that that is indeed the accepted standard. However, I still maintain that if messages are received with >80 column lines, a reader should allow you to see the entire line.

>> And GEM horizontal scroll bars are not exactly new technology.
PR>
PR> I say it once again : Not every mail reader is a GUI client with
PR> windows. In fact there are probably more mail clients that have no GUI
PR> than clients with GUI.

You missed my point. I was referring to GEM readers that don't support lines with more than 80 columns. I wasn't suggesting that Internet policy should be changed because of GEM. I was only suggesting that GEM readers should support lines with more than 80 columns, because standard or no standard, many messages DO contain lines exceeding 80 columns.

It can only be turned down with XControl's SOUND.CPX. I don't think there's
a way of turning it down independently from other system beeps.

g> ... and you can move it about. This may not be immediately apparent
g> to english users as I've never seen any docs on it.

I've extracted this from the German manual:

+ Overview of the keys used:
Help Display switch-over
Undo Read settings from CLOCK.INF
Insert Time setting
Home Move window to top right corner
Shift-Home Restore colours to black and white
Cursor-Up Colour setting-up
Cursor-Down " " "
Shift-cursor-Right " " "
Shift-cursor-Left " " "
Control-cursor-Right " " "
Control-cursor-Left " " "
Control-S Save settings in CLOCK.INF
Control-C Write date to the Clipboard
Control-U Close window
Control-D Change between Normal-and 3D-display

g> On the other hand someone could look in the german docs and tell us!

God, I hate it when someone says that...

Ok, I've just translated it (be gentle with me - I got tired towards the
end...)

==========
CLOCK.ACC, version 1.9e Copyright 1989-1991 by Stefan Hintz
is a Clock Accessory. It is Shareware.

+ CLOCK.ACC
Runs in a borderless window and displays the time as Analogue or
Digital.

+ The clock continues to run correctly, even if it is partly concealed
by other windows.

+ With the 'Help' key you can switch between the following displays:
0. Analogue
1. Analogue and digital date
2. Analogue and digital time of day and date
3. Analogue and digital time of day
4. Analogue, digital time of day, date and alarm time!
5. Digital date
6. Digital time of day and date
7. Digital time of day

+ Window move:
To move the window keep the right mouse key pressed; in this way the
window can also be moved beneath or between other windows.

+ Status save:
If 'Control-S' is keyed, the current position and status is saved in
the file CLOCK.INF on the boot drive. On rebooting the saved position
will be recalled.

Explanation of an example CLOCK.INF file:

Version Identification : @(#) Clock.Info 1.9
Relative X-position : X 10000
Relative Y-position : Y 10000
Width : W 64
Height : H 64
Status : S 0
Object Colours : C 6,1,2,3,7,4,14,9,10,11,15,12
Auto-Open : O 1
3D-display : D 1
Alarm Time : A 0700

+ Window close:
The window can be closed with 'Control-U'

+ The window can be moved to the top right corner with the 'Home' key.

+ Undo:
The 'Undo' key will recall the saved position and size from CLOCK.INF.

+ Time Entry:
With CLOCK.ACC you can obviously also adjust the time, by double
clicking the clock face:
Now you can edit the date, time of day and alarm time.
The 'Return' key completes data entry.
Incomplete or nonsensical dates cause no change in the time of day or
the date.
Auto-open:
The field "Auto-open" is switched on and off with the mouse.
In this way it can be configured whether the clock window should open
automatically in every GEM program or only in programs that understand

the AV_PROTOKOLL, eg: in Gemini.

+ The 'Insert' key also calls the Time Entry section.

+ If the clock window is open in a program, it will also be automatically opened after a Program change. (See also: "auto-open")

+ CLOCK.ACC
Tries, in the automatic opening of its window, to be the second top-most window open.

+ Alarm Time:
CLOCK.ACC can now send an announcement to Gemini, at a configurable time, that the file CLOCK.MUP on the boot drive will be executed. You should enter the program to be started and its parameters in the file CLOCK.MUP. In this way you can set, for example, an alarm call or call your BBS Mailbox. This only works if Gemini is active and the clock window is open.
If you prefer that the alarm function is inactive you should leave the alarm time input field empty.
A small marking appears in the clock face if the alarm time is active.
After changing the alarm time the current Status should be saved with 'Control-S' so that the new alarm time is not lost at the next reboot.

Structure of the command line that will be passed to CLOCK.MUP:
$0 : Contains the full path name of the CLOCK.MUP file
$1 : Contains the version number of CLOCK.ACC
$2 : Contains the full path name of the CLOCK.INF file
$3 : Four digits of the alarm time
$4 : Six digits of the time of day
$5 : Eight digits of the date

In CLOCK.MUP you can overwrite the files CLOCK.INF and CLOCK.MUP with other files, so like this eg. a new alarm time and a different alarm program can be preset.
If CLOCK.ACC receives the VA_PROGSTART Message, CLOCK.ACC reacts the same as with the 'UNDO' key. The possibly altered CLOCK.INF file will thereby be re-evaluated. In this way it is, for example, possible that several programs can be called at different times of the day. It is also possible this way to have differently timed alarms on successive days.

+ With the pure analogue clock display the mouse pointer will only be turned off if it is located inside the window; thereby it stops the disturbing flickering of the mouse pointer in the ticking of the second hand.

+ CLOCK.ACC
Runs in all resolutions, on all Atari ST/TT Models and with all graphics cards that support GEM.

+ CLOCK.ACC matches the window position automatically to the screen size; also to the switch-over of AutoSwitch-OverScan.

+ CLOCK.ACC
Can also be renamed CLOCK.APP, it then runs as a program. In this case the AV_PROTOKOLL will be used under MultiGEM too.

+ CLOCK.ACC reacts to the Message number 0x4711
(VA_START like, for example, that which Gemini sends out to ACCS if you Double click on an ACC-icon) while the window is being opened or closed.

+ CLOCK.ACC uses the AV_PROTOKOLL.
Sent:
AV_PROTOKOLL, AV_ACCWINDOPEN, AV_ACCWINDCLOSED, AV_SENDKEY and AV_STARTPROG
Received:
VA_START, VA_PROTOSTATUS, VA_PROGSTART
For the precise meaning of these messages please refer to the Gemini v1.2 documentation.
Suffice to say; the whole thing relates to key presses that the CLOCK.ACC can't use that are passed onto the main application running. The main application will also be told if CLOCK.ACC has an open window, with which the top program can include when changing windows (in Gemini with 'Control-W').

+ Clipboard:
With 'Control-C' the current date will be written in the Clipboard as file SCRAP.TXT, but only if a different program (e.g.: Gemini, Wordplus) has already set up the Clipboard. The other SCRAP.* files are deleted.

+ Colour setting-up:
On repeated request from an individual gentleman (J.R.) you can now freely choose the colours on the clock face. This function is only accesible from the keyboard.

Background colour:
'Shift right-cursor' = Colour Index 1 raised
'Shift left-cursor' = Colour Index 1 lowered

Foreground colour:
'Control right-cursor' = Colour Index 1 raised
'Control left-cursor' = Colour Index 1 lowered

Altogether, colours for six objects are adjustable:
Pointer
Background
Second hand
Slash (these are the markings for 3, 6, 9 and 12 o'clock)
Points (these are the markings for the remaining hours)
Alarm time marking

With 'cursor-up' and 'cursor-down' you can choose between these six objects, along with 'Control right-cursor' and 'Control left-cursor' for the colour these objects can be adjusted to.

Return colours to black & white:
'Shift-Home'

If you do not like to see certain objects (eg: Second hand or Alarm time marking) give them the same colour as the background.

+ 3D-display:
The 3D-display is only possible with a graphic resolution of at least 16 colours. The 3D-display is achieved through light and shadow on the objects. From there the colour is adjustable for every one of the six objects - additionally for the illuminated page.

In this example 'Shift-Home' causes a restoration to coloured colours. Using the Standard GEM colour palette results in the following:

Pointer: Yellow, Light Yellow
Background: Black, Dark Grey
Second hand: Red, Light Red
Slash: Green, Light Green
Points: Magenta, Light Magenta
Alarm time marking: Blue, Light Blue

The Standard GEM colour palette for the first 16 colours we see the following:

Colour Index: Colour:
0 White
1 Black
2 Red
3 Green
4 Blue
5 Cyan
6 Yellow
7 Magenta
8 Light Grey
9 Dark Grey
10 Light Red
11 Light Green
12 Light Blue
13 Light Cyan
14 Light Yellow
15 Light Magenta

+ CLOCKCOL.CPX
In order to simplify adjustment of colours in CLOCK.ACC, you now get a CPX-module for the modular control panel XCONTROL.ACC.
XCONTROL.ACC is contained in the standard pack of all newer MegaSTe and TT computers. It is only meaningful to use CLOCKCOL.CPX with 16 colours. Obviously, it is silly to have a CPX which controls the operation of a desk accessory.

+ Changing the size of the clock face:
The size of the clock face can be changed with the left mouse key pressed. Click either on the border of the window around one of four

edges to move, or in one of four corners of the window to change.
If besides the analogue clock face the digital time report is also activated, the width cannot be changed.
The size can be varied between 16 and 80 pixels.
During the alteration the size will be displayed in a small box in the middle of screen.

+ On an STe or TT, with which digital DMA-Sound is available, a small church bell sounds at every full hour. It rings 1-12 times, depending on the time of day.
To regulate the volume/tone use Atari's XCONTROL.ACC.
DMA-Sound will not be activated if you decide to load CLOCK.ACC into TTRAM.

+ For people who do not have a battery-backed System-clock available CLOCK.ACC compares, by reading the CLOCK.INF file, the file date with the system time. If the system date is older than the file date, the system date will be changed to the file date. Besides changing the clock in this case, look for the right time to feed in. With 'Undo' the adjusted Look can then again be reached. The file date can be put into the system date with 'Control-S'.

+ Overview of the keys used:
Help Display switch over
Undo Read settings from CLOCK.INF
Insert Time setting
Home Move window to top right corner
Shift-Home Restore colours to black and white
Cursor-Up Colour setting-up
Cursor-Down " " "
Shift-cursor-Right " " "
Shift-cursor-Left " " "
Control-cursor-Right " " "
Control-cursor-Left " " "
Control-S Save settings in CLOCK.INF
Control-C Write date to the Clipboard
Control-U Close window
Control-D Change between Normal-and 3D-display

Ghostscript does indeed allow you to read or print PDF (as well as
PostScript, well most of them anyway) files. A web search will get you a
handfull of sites from where it may be downloaded, however some of them don't
have the later version 3.53B.

Configuring it is somewhat tricky, it has been covered a few times in this NG.

Well done, that's the main hurdle jumped.

m> It says I have successful connection, also I only can hook up
m> at 9600 baud? curious since my unix and same modem...I run at
m> 28.8?

Activate the serial.cpx that came with STinG and check the serial port settings. If you have an ST it should be set to 19200, 8N1 and RTS/CTS.

You should also have the HSModem patch in your Auto folder in the order:

DRVIN.PRG
MFP.PRG
STING.PRG

m> Anyway...where do I go from here...? After exiting the Dialer..
m> then what do I do?

Whatever you want, FTP, newsgroup or mailing with Newsie, Web browsing with CAB.

j> use without fouling up the DMA. It used to be sold commercially, but

Ah right, thanks. I saw this or a similar item on sale in an Atari store (I forget where now, it's long since closed), but it was so expensive that I built my own. It's not difficult, I built a short cable with Dway connectors so that I could disconnect the 5V feeds from the printer and feed the controller directly from a regulated 5V supply. I even had remote LEDs for repeating the info on the SLMC804 controller so I could leave that dangling behind my desk. The project was published in an early edition of ST Applications.

My Falcon/MagiC 5.11/NVDI 4.11r9 combo scrolls fine, however garbage from the bottom of the window gets scrolled into the message rendering it illegible.

I've made a fix by turning window buffering off (and emailing John with a bug report), perhaps this might help you too.

That's right - I came across them when working on ST Format - the ST version of Protext was quite groovy too, IIRC. It got a bit of stick, though, because it wasn't as presentation-intensive as the other WPs around.

The real old 520 ST's with no TOS in ROM had some nice grafix on bootup
asking
you to insert the system disk into the drive. If you want to see that
original
Atari ST boot screen get a copy of the TNT FNIL demo. The reset screen
emulates
the ST-without-TOS behaviour.

Bye, Hans

The ring indicator trick will work only when the interrupts aren't
changed. The
best way is having the Ultimate ripper cardridge (don't know if there is
a Falcon
version), an other way for the ST is using Pacifist to grab the screen.

Bye, Hans

1672. NVDI's FONTNAME

Newsgroup: comp.sys.atari.st
Date: 1998-01-27 00:00:00 UTC
From: rcain@zetnet.co.uk
Message-ID: <6akthv$24l$1@roch.zetnet.co.uk>
Source record: 109042

I always get annoyed when I call FONTNAME to make some font installation adjustments to find that it comes up with an empty browser window which I then have to fill with Add... Add Folder etc. before I can start any work.

This seems screwy to me! After all, FONTNAME knows where all the fonts are because you tell it in its installation. It could also have a good guess at where to find the uninstalled fonts (/fontpath/HIDE) because that's where it puts them if you dont tell it any different.

On top of this NVDI spends time maintaining the .FIF file.

So .... why does FONTNAME act so dumb when you call it up? It could just as well discover all installed/uninstalled fonts and report them in the browser window.

Am I missing something? Are there some ENVs which can be set to make it behave better? Is there a better tool for managing TTF/SPD fonts?

I've read the NVDI manual and the NVDI docs from back to front but can't find any clues.

Roger Cain, Manchester, UK NeST:90:100/103

There's a couple I know of. F_S_dump.prg & Snapshot.prg both work on a
Falcon.

> C> For GEM applications you can use "That's Snap!" which can grap
> C> sections of the screen and saves it as an IMG file. You'll then need
>

Snapshot goes in the Auto folder, so it should work, unless its a game
that just takes over the entire computer. I don't know that much about
games, though.

> The hardware used to be available from Power Computing, but you may only be
> able to get second-hand versions now.

I actually have an Ultimate Ripper for sale. It will definately _not_ work
on a Falcon.

1st-Guide reads them if I remember well... available on most FTP sites.

>2) If I'm using an emulator, where do I put .ACC files so they'll
> appear on the desktop?

Put them in the directory you have set at 'harddisk' directory, or if that
doesn't work, make a boot disk image, and put them on there.

>
>That's it for the questions; if you are interested in why I'm asking

I'm not sure if anyone has ever acheived connecting a PaCifiST emulator to the
net... I'm not even sure that the serial port hardware is emulated enough.

>

You didn't forget the CAB.OVL file, did you ? It is necessary to make a link
between CAB and STiK/STiNG.

I would suggest giving up STiK, and using STiNG instead, as it does PPP and is now pretty stable and easy to set up.

>
>(In case you're wondering how we got him almost online with no

>Summary:
>In order to be able to make screen snapshots on an Atari emulator, I
>need to know how to install .ACC files (on either TOSBOX or PacifiST);

Not really, you can use the 'print screen' key function of the PC (with Alt or Shift or something, I don't remember...) to copy the current screen, then paste it into whatever graphics program you're using.

>also, some Atari documentation is in .HYP format and I need to know

It's more than 200 pages and for a translation expert knowledge about
hard disks, floppy disks, controller programming, data structures on
hard disks and how to repair them etc. is required.

There were major changes, especially the integrated generic SCSI driver.
But as important as this feature is, for the user it's only an
additional option in a dialog box. And as I already said: You can buy a
new manual if you want one.

If you enable background DMA in HDDRIVER and no SCSI drive is connected,
nothing at all will happen. For IDE drives HDDRIVER doesn't even check
if background DMA is activated or not.

Direct Cable Connection (DCC) works between PC's, you cannot use it to connect
to an Atari. You can use TCP/IP to connect to a PC, Sting should work fine.

You will need to use the Windows Dial Up Networking option.
I use this with MiNTnet & it works well (ftp, telnet).

>If so can I hook a CD ROM to the ST and get to it through the connection?
>(I have an older notebook PC with no CD)

You are talking about using the ST's CD-ROM on a PC.

To do this, you would need some sort of network file system (NFS) between the
ST & PC. Peter has not written an NFS for Sting yet.

It is much easier to put a CD-ROM on a PC & use it on the ST; a program called
Ghostlink will do this.

>Who were Compo software again? That name rings a severe bell.

I heard that they were a partnership(?) based in Huntingdon, who were established suppliers to the Atari-using fraternity. The version of the story which seems as close to the facts as we'll get (unless someone knows better) is as follows:

When Arnor Ltd went belly-up, Compo approached Mark and Gavin (the copyright holders of the Atari version of Protext) and offered to buy the existing manuals back from the liquidators and relaunch all the 16/32 bit versions of the program, with a share of the profits going to M & G for their interest in the program.

Reprints of the manuals would be done as required on an on-going basis.

Apparently, neither Mark nor Gavin saw *any* division of profits for the 12 months (approx) that Compo offered the program, even though the stock of manuals *were* used up by the end of that time, presumably on sales of Protext.

Compo went out of business rather suddenly (usual story; not responding to messages on the answerphone, not answering the phone, then line disconnected)
and, as I was aware of their existance as we were referring customers to each other for the various versions we were each handling, I talked it over with Peter Campbell and we approached Mark and Gavin about doing the job properly.

Which we now do.

If any of the above allegations do not accord with the facts, I would be pleased to hear another version (in or out of the newsgroups)

> On a TT it is only used for floppy access to/from TT-RAM.

Well I would guess the FRB is used for all _DMA_ operations (except
sound ofcourse) as you can't use Fast-RAM for DMA operations. As
floppy _and_ SCSI access both are DMA operations (atleast on the
Falcon) you must use some kind of buffer or it just wont work.

As I'm not the expert on this (but I do belive that the above is
correct) I will ask someone who is. But for now I would say that the
above is correct. Shouldn't Uwe know a bit more?

For IDE drives there is no problem ofcourse as it doesn't use DMA
but floppy and SCSI does.

How does the TT handle SCSI acces to/from Fast-RAM? Isn't it a
DMA operation on the TT?

1692. TT hardware questions

Newsgroup: comp.sys.atari.st
Date: 1998-01-27 00:00:00 UTC
From: Julian Coleman <J.D.Coleman@ncl.ac.uk>
Message-ID: <6al17ebsc1@ucsnew1.ncl.ac.uk>
Source record: 109062

I'm after a few hardware recommendations for my TT. The first is a new disk. I think my existing DEC 1Gb is going to die soon (it's making loud squealing noises - I presume the bearings are going), so I'm looking for an internal boot disk (2Gb or larger). Does anyone have any particular recommendations?

The second is memory - I currently have a Systems Solution expansion board with 20Mb installed (4 x 4Mb*9 80ns, 4 x 1Mb*8 70ns). When running NetBSD, it falls over with MMU faults. I think this is a memory problem, but I'm not sure if it's the expansion board or the memory. Shuold I go out and get an aixTT board?

The third is typing problems. If I type quickly enough, I can be pressing one key while still releasing the previous. If I have the left shift key pressed, and one key is 's' and the other 'w', 'e', 'd' or 'x', I end up with the equivalent of <shift><F1> being pressed. This is very annoying - I end up typing 'NetBS^[~10D' :-(I tried using a Mega ST keyboard instead of the TT one, but that made no difference. Also, it's not software - it's the same with/without auto folder/accessories, etc. Can anyone else reproduce this, or is it just my machine?

Thanks,

J

1694. Re: NVDI's FONTNAME

Newsgroup: comp.sys.atari.st
Date: 1998-01-27 00:00:00 UTC
From: Michael Clemmetsen <m.clemmetsen@sunderland.ac.uk>
Message-ID: <34CE1528.D66DA057@sunderland.ac.uk>
Source record: 109064

The only explanation I can think of for FONTNAME to behave the way it
does is that if you have a large number of fonts installed on your
system, it would take a long time to display all of them on a standard
ST as each one was loaded and rendered. This is why I have show fonts
turned off in the Papyrus fonts panel.

1697. csound for 68030+fpu?

Newsgroup: comp.sys.atari.st
Date: 1998-01-27 00:00:00 UTC
From: sunset
Message-ID: <6al5rf$eb@snews1.newsguy.com>
Source record: 109067

Does anyone know if there exists a 68030+FPU compiled version of csound somewhere? As is, the normal version of csound is pretty painfully slow. If there isn't one, is it very difficult to compile such a version given the source code? Actually I think the source code is readily available from the csound ftp sites.. only I don't know C.

Thank you in advance.
tkk@sunset.net

>At the moment they produce browsers for PC, Mac and are adding Amiga! If we send them enough emails they may support the Atari ST, but only if they get the interest, so get emailing now .

John,
I download a version for both the PC and the Mac. Really is a well thought out program and the file size is very small. just over a meg for the IBM version. Why couldn't wintel IE be this good? Anyway I let them know that I would be very interested in have this program for the ST computer. Come on guys here is your chance to make a difference. Drop these guys a note and let them know we want good software like theres for our Ataris. Go visit there site at> http://operasoftware.com/alt_os.html Let them know that there is a GOOD Atari market for quality software. Come on help us make a difference, vist them today.

Well, maybe I might be persuaded to reduce it a bit to just
"brainless" then. <G>

># It might be
># so brain dead that it only counts lines and looks at the first char on
># each - so you might fool it by with some carriage returns, or better,
># by fooling it into thinking some other character is the "quote" by

>I believe they can be fooled by using different quote characters.
>My ISP's can be fooled this way at least ;-)

Have you ever experimented to see if it lets mime, or more
specifically all that html through? If it applies equally to that then
I'll have to change my opion to "it's a good idea but not quite
implemented right" ;-)

>had a list prepared. :-((

Anything that is still there Sunday morning I will get and burbn onto CD at work. And I mean everything, we've got a dual-ISDN fixed link to our ISP from work, at 7am Sunday the net should be quiet, I'll be getting LAN quality speeds out of the FTP software. The company doesn't mind, the fixed link costs about 4K a year to have but nothing for use, as long as I provide my own CD's I'm OK...MAybe I'll have atrawl round the rest of the decent FTP sites over the next few weeks (any and all adresses to me via email please) and do the same. God knows what I'll do with it all, but at least it'll all be somewhere, if anyone does find new FTP site to upload it to...

>turned off in the Papyrus fonts panel.

Hmm .. I would be prepared to wait for any particular font to be
rendered if I selected it but basically FONTNAME would have to do
little more than NVDI does on initialisation to be able to show a list
of (un)installed fonts i.e about a second to search for the files and
read their headers.

Still bemused.

That's true, but it depends what you want from a word processor (features or fonts) and plenty of Protext users are quite fanatical about it. Sales of the Atari and PC versions confirm it is still "the mutt's nuts" as far as many users are concerned.

THE COMPUTER DUNGEON is happy to announce that we have just received a small supply of HD Driver 7, NVDI 4, and CAB 2.5 today.

Prices are:
HD Driver 7 - $49.00
CAB 2.5 - $49.00
NVDI 4 - $89.00

Above prices do not include shipping. VISA and MasterCard accepted.

As I said, we have just a few copies in stock now but we should be receiving more copies of each program very soon.

Give us a call at 708-547-7085 or visit our website at:

http://www.mcs.net/~isis/dungeon/dungeon.htm

Thanks for taking the time to read this and we look forward to helping you with all your Atari needs.

> that as we progress we'd become MORE flexible, not less.

That point I was making is that Internet happens to be this way, and there
is no easy way around it. 99 % of all mail readers want in some way 80
characters a line messages. Simply starting to ignore this means pissing
off all the users of those mail readers.

> PR> Ok, then maybe you find my mail reader unacceptable.
>
> I didn't even know you wrote a mail reader. Or do you mean the one you use?

The latter.

> PR> I do not care about people who think they can enforce their own
> PR> standard. They'll fail, that's for sure. If I don't get their mail
> PR> it's not my problem, but theirs.
>
> Maybe they don't know what they're doing, or maybe their software is the
> problem and not them.

Sure. In the few cases where I did not bother to reply to the contents of
such badly formatted mail, I've sent the hint that their mail readers does
bad formatting which prevents me from replying. I know it's the programmers
of those readers who are to blame, not the users.

> PR> PS.: Next time I send you mail, I'll talk into a microphone and record
> PR> my voice, and send you the sample file. Since a mail-reader that is

> PR> unacceptable.
>
> That's silly. We're talking about simple text that just happens to be

> formatted to more than 80 columns.

Which is not much different. Just like what I said, this is violating
standards. The only difference is - and that is why you call this silly -
that you happen to be able to deal properly with mail containing lines
longer than 80 characters, while your mail reader does not support samples.
It's simply taking over your calling a mail reader unacceptable that is
not able to deal with non-standard things.

> And GEM horizontal scroll bars are not
> exactly new technology.

I say it once again : Not every mail reader is a GUI client with windows.
In fact there are probably more mail clients that have no GUI than clients
with GUI. If you have a terminal connection (a Telnet, or a Terminal emu-
lator hooked up with a serial line), you're stuck if you got mail with lines
longer than 80 characters.

Cheers Peter

From what I read in the 2.5 manual about HOW it achieves its speed, I would think it would at least mostly apply to VFAT partitions, too (at least relative to the speed of MagiC/etc. using VFAT partitions).

Anyone with 3.5 care to comment on the speed issue?

Hi :)

Is there a program for an Atari ST that can take say gif 87a and change them into gif 89a format - making it possible to have one color transparent?

1719. Toner for LAser Printer

Newsgroup: comp.sys.atari.st

Hi Steve.

Well, I got to the page where I register, then CAB 2.6 craches, and send
me out on the desktop. Tryed twice with the same result.

cheers Joergen

The problem is that some newsreaders are broken and allow people to send
arith lines >80 chars out into the big wide world.

> Even if we all
> agree that 80 columns SHOULD be the max, and we should ALL strive to achieve
> that end, a reader should STILL be able to handle messages from those who do

Yes it should, if it doesn't it is not however the fault of that
program.

> None of those conditions
> necessarily equate to their message being not worth reading.

The problem is that of not being able to read it.

>Is it possible to connect a Syquest 5.25 cartridge drive to the ACSI port
>on a Mega 4STE?
>If so, what hardware or software do I need?
>Thanks
>James

Yes, James,

You can use a SCSI Syquest drive on an Atari.
What you need is one of the the following types of host adaptors for
the Atari which convert the ACSI signal into SCSI (Small Computer
Systems Interface).

ICD Link I or II
(Link II Recommended, it allows better compatibility with SCSI II
drives)

ICD host adaptor card

And a case, power supply and cable. The ICD host adaptor should come
with the proper software to allow you to format/boot the Syquest or
other SCSI drive. I've run as many as 5 Syquest drives on my Mega 4ST
at one time. They are dirt cheap now for the drive mech's,

Others that are looking for the drive mech's, look at the e-bay
auctions at http://www.ebay.com/aw and do a search for
Syquest, I've purchased many drives thru here. Note: These are
private individuals selling items, as always, buyer beware, but I've
had good luck and only gotten ripped off twice in about 30
transauctions so I didn't feel it's that big of a risk. Just thought
I better warn everyone.

Mike, Believe it or not, when the ST came out, drives were still expensive, not like nowdays where you can go to nearly an PC Computer store and get a 1.44 for less than $20.

The first 8 bit drive I got was over $250, my first Atari 720K was $100 used. The 1040's and 520ST's when they first came out all had 360K drives and the 720K drives were a upgrade type of item, of course, the floppy disks cost about a dollar a piece back then also. The 720K didn't really become a standard issue until Atari owned Federated and they started selling 1040STFM's equipped with the 720K's

While other Atari dealers could only get external SF-314 drives for about $150 as sort of an upgrade item on your packaged 1040 color or mono system (about $1299 for a color and $999 for a mono system)

Where I just put a 1 gig removeable drive in my PC which cost less than my first Atari 50 meg HD. Times change and so do prices.

After buying quite a few computers i've accumulated duplicates of

these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Mega ST 2 ..... $275
* Atari 1040STf (1 Meg) ..... $ 65
* Color Monitor (Atari) .....$ 40
* Black & White Monitor ..... $ 25
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* External Disk Drive ..... $ 25
* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10
* Black and White Monitor ..... $ 35

Software: All With Manuals

* Easy Draw ..... $ 10
* Degas Elite ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* The Juggler ..... $ 5
* Geneva/(Multi Tasking Program) & NeoDesk(Desk Top Prg .. $ 50

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10
* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10
* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10

* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Breach ..... $ 10
* Star Fleet ..... $ 10
* Time Bandit ..... $ 10
* Quest Glory ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3

Willing to work on package prices. Buyer(s) pays postage!! All reasonable offers will be considered!!!

>thinner as C++ and visual C takes over, so we arnt even getting the
>users anymore :(

I've been half heartedly looking for compiler sources but haven't had
much luck so far.

There's no real need for C++ on the atari platform imo but I see what
you mean. Four hours after installing C++ Builder I had one of my
atari programs ported and running. It's not called a RAD tool for
nothing!

On the other hand, in a few years time there's going to be a lot of
people out there who'll be calling themselves programmers who'll be
nothing more than "bolt it together" merchants, not unlike PC
companies are today.

> I think you would get more joy and more programming done by

Yes. The original question had the intention of trying to find out
what would entice new programmers which puts a slightly different bias
on the matter.

>Remember Steve Yelvington who wrote the little FAQ on how to program the
>ST to use the modem port? He's still around. However, that little file is

As you no doubt have guessed from the csasp thread, it's exactly this
I'm trying to address. Question is ... is it worth someone devoting a
lot of time and effort doing whatever it is needs to be done? Or are
there so few potential new programmers left to make it unworthwhile?

compress can't deal with as many compression alogorithms as gzip.

>Question:
> I have downloaded these sound files from the michigan ftp site, and
>they are all in extended long filenames.
>IE PEEWEE.SND.Z
>When I download them they are
>PEEWEE.SND files as the .Z is dropped.
>I have tried to decompress them as above and also by changing the name to
>PEEWEE.Z and then tried to decompress.

Okay. You've just downloaded HAL.SND.Z - put GZIP.TTP and HAL.SND.Z
into the same folder. Execute your command line interpreter then make
the current directory the same as where HAL.SND.Z etc have just been
put. Lets assume you've got 8+3 filenames and the file has been
truncated. Thus HAL.SND.Z won't be called that at all now but I'll
refer to it by its original name on the ftp site.

Rename HAL.SND.Z to HAL.Z

Type gzip -dvr HAL

and you end up with a file called HAL of a different size. Rename HAL
to HAL.SND and that's it.

On my STE three of the HAL files don't play at the right speed btw.

If you still can't solve it then tell me the exact locations of all
the sound files you want. I'll go get them, unpack 'em and email them
to you zipped!

Dunno. We're talking lots and lots of megs. I managed a brief look
sunday night before I got a line drop. Spent hours trying to reinstall
the bloody modem. :-(

Anyway, you could vastly reduce the download by getting the full index
files from other sites and only retrieving the unique filenames and
sizes. I'm kicking myself. I should have thought of this on sunday and
had a list prepared. :-((

I'm having some problems using STinG for FTP. Almost all files have CRC errors. I'm using a recently aquired 28.8k GVC modem, and I'm having no problems using XYZ.TTP with term programs like Connect and Rufus.

I'm assuming the problem is with STinG, but I don't know what to change.

Ross,

It sounds more like a port problem - CRC errors usually are. A few questions:

1) Are you using a serial fix (ie HSModem, FastSerial?)
2) What type of machine, Falcon, TT, ST
3) Have you checked flow control with the Serial.CPX that Peter includes in the STinG package
4) Finally - what verison of STinG are you using and how are you connecting, SLIP, CSLIP, PPP ?

All of the above info is really needed to try and figure out what is going on. There are a lot of us using STinG for our internet connections with no problem in downloading files via CAB and FTP.

1737. Help with TOSBOX or PacifiST: reading .HYP files and where to put .ACC files

Newsgroup: comp.sys.atari.st
Date: 1998-01-27 00:00:00 UTC
From: tomio@unmonty.ai.mew.co.jp
Message-ID: <34cd8347.77533843@news.mew.co.jp>
Source record: 109174

Hi all,

I've got both TOSBOX and PacifiST running on my Wintel box, and
I need some help that's so basic it's on none of the web pages nor in
any of the FAQs I've looked at. Just two questions:

1) What application do I need to read .HYP files?

2) If I'm using an emulator, where do I put .ACC files so they'll
appear on the desktop?

That's it for the questions; if you are interested in why I'm asking
please read on...

I want to get on the internet using an Atari Emulator, and, using a
screen capture utility, capture screen snapshots of every pertinent
step from unzipping/installing utilities to configuring STiK/STiNG, to
configuring and using CAB/Newsie/Antmail. The goal then is to use
these figures and the learning experience of getting my Atari emulator
online, to create a well-illustrated users' guide which documents the
entire procedure.

This guide will then be sent via post to my father-in-law (in the UK),
to help him get his Atari 1040STFM (now with 2.5MB installed) on the
internet. When I visited earlier this month, we had STiK working and
dialing the ISP, but CAB never could quite get on the web. Now I'm
back in Japan and so I have to try to do this remotely, using an
emulator on my Wintel box.

(In case you're wondering how we got him almost online with no
internet access, I downloaded all software I thought we'd need, then
transferred to two floppies forced to 720KB and hand carried them to
the UK during my brief visit; he bought a modem the next day, was
really excited about the prospect of getting online, and was a bit
disappointed when I had to leave, having failed my mission)

Summary:
In order to be able to make screen snapshots on an Atari emulator, I
need to know how to install .ACC files (on either TOSBOX or PacifiST);
also, some Atari documentation is in .HYP format and I need to know
what application I should download in order to read these files. Any
brief clues/links/URLs/FTP sites/FAQ sites/ideas/suggestions
appreciated.

Thanks,

: As the AB040 is the only 040 machine with Fast-RAM which MagiC works
: with
: I guess Andreas wont look at it either.

Are you sure that the FRB is used for _all_ disk operations?
On a TT it is only used for floppy access to/from TT-RAM.

Correct, However comp.sys.atari.st.announce is classed as moderated,
hence the problems, everything has to go to the moderator to check
before it goes into usenet, this is where the problem is
>
>>Is it still active? I've subscribed to it for several weeks now, and there

Sorry thats wrong, Plenty of people have tried to post to it, the
messages are recieved, sent to the moderator and then..I don't know ?,
but this keeps the newsgroup live, but still useless :(

Hehehe.. this is starting to be confusing. Wasn't it someone else who said that his computer slowed down when enabling background DMA even when he used the IDE drive? :-)

If I was wrong, I'm sorry.

I have no problems as I don't use background DMA. I guess I have to test it and see what happens. Sorry if I confused anyone, but I think it was someone else than Jo Even and me who had problems.

I was thinking about this situation, and I thought that where I work, the US Postal Service, there is a Postal Relief fund that helps employees in distress. Of course, there is no Atari workers relief fund. I think that Alex's loyalty to the Atari community is partly what left him vulnerable to the robbery. If he had switched to WinTel, he may have been in an upscale zone in a fancy store. But, he stayed with us, so I would like to see all of us pitch in with a little bit of help for Alex. Make our own kind of Relief Fund.

Many of us are still with Atari because we don't have a bundle of money, and I know my finances are marginal, and there are others who stick with Atari for the joy of the system, regardless of cost, as evidenced by Hades purchasers.

Whatever your means, I would like to request that everyone send Alex something. I just placed a small order, and added a small donation to the amount. I hope everyone who can will do likewise.

From: John Kolak <jkolak@jps.net>
Message-ID: <34CFAB21.E8AA153E@jps.net>
Source record: 108889

According to the Atari tech bulletin, the jumpers at A16, A17, and CE
are marked 256K (for 6 chip) and 1MB (for 2 chip), and the appropriate
pads are closed for the proper configuration. This is on the 520/1040 ST
configuration. The Mega ST series have PC type jumpers at W2 and W3
which are jumped 1-2 for 256K, and 2-3 for 1MB. Also, for 256K close W4
and remove the 74LS11 if present in U12. For 1MB open W4 and add the
74LS11 at U12 if missing.

1754. Harlekin3/XControl help!

Newsgroup: comp.sys.atari.st
Date: 1998-01-28 00:00:00 UTC
From: cstanley@zetnet.co.uk
Message-ID: <6aoc5j$4gi$1@irk.zetnet.co.uk>
Source record: 108891

Suddenly my Harlekin.Acc will not load its modules or their icons.
Equally XControl.Acc will not load up: it 2-bombs out (So does COPS).
No apparent reason. I've re-installed them to no effect.
This happens on my TT in TOS (3.05) and in Magic (5.11).
Any help, anyone, please?
If I can log on and send this message, it'll be without any CPXs!!!

Charles Stanley * GM1MCN@GB7ABN * Aberdeen, Scotland

Oh, now that you put it that way, yes, I am interested, but I am still
learning (just read Compute's From Basic to C) and have a long way to
go, but knowing which C compiler to use is confusing. I think I
narrowed it down to Sozobon C or GNU C.

Hi there all...

I am planning on obtaining a ZIP DRIVE (SCSI) for my Atari 1040STe using the LINK II plug. The question I have is, can I use the ZIP DISK DRIVE as the one where my System software loads on it? I know it emulates a Mac Plus computer, but I am not sure if that system can work with a ZIP DISK. If so, also where does one obtain a driver to run it through the Macintosh. Thanks...

1760. Used 1040 ST for sale

Newsgroup: comp.sys.atari.st
Date: 1998-01-28 00:00:00 UTC
From: Karl.Schaefer@drake.edu
Message-ID: <886028355.403636234@dejanews.com>
Source record: 108897

Greetings! I have a used Atari 1040 ST(f) machine for sale. Included are the CPU/keyboard, mouse, Supra 20MB external hard drive, SM 124 b/w monitor, and an Epson dot matrix printer. All components are packed in their original boxes and packing. The computer had a new power supply installed about five years ago and has been used sparingly since then. I will consider any reasonable offer and may be contacted at e-mail address indicated, or by phone during business hours (Central Time) at (515) 271-2924.

I'm now a little worse off with the latest version of STiNG and its modules. In the past, I could get connected but could never resolve and addresses. Now, after getting connected I get the message "Initialising link" which ends up timing out after 60 seconds. I do get connected and get back an IP address but then get stuck on that message.

What does that message mean? Is this a clue about some setting that's not quite right? I'm trying a PPP connection.

Only the ST DMA is limited to ST-RAM. The TT has a newer (second) DMA
controller that is able to write to TT-RAM. That one is used for SCSI,
sound, and the serial port handling.

IN ENGLISH:
Background-DMA is described in full details the the docs for MagiC 3
(only available in German AFAIK). The calling task simply does a 'waiting
for I/O'. When the interrupt from the SCSI- or ACSI-chip arrives, the
task is re-awakened.
The interrupt-mask is not altered during the wait. The interrupt-
handler for ACSSI/SCSI is so small and short that this would not be
critical.

> You are wrong.

I may be wrong, but could you explain a bit more? As you can't make
a data transfer via DMA to Fast-RAM, how is it done then? If you use
a buffer in ST-RAM it's not such a good idea to have this buffer
cacheable on a CPU like a 040/060. On a 030 it's probably no problem.

> : As I'm not the expert on this (but I do belive that the above is

> : above is correct. Shouldn't Uwe know a bit more?
>
> Yes, Uwe is _THE_ expert. Julian is also.

So maybe Uwe could explain how the data gets into Fast-RAM then?

Regarding HD-Driver. If you use the option in HD-Driver to use (or
does it create it's own?) the FRB buffer, does HD-Driver use a FRB
buffer
of it's own and the one in MagiC will be ignored, or will it use
the buffer in MagiC (which isn't possible to locate as the buffer is
hardcoded somehow)?

> : How does the TT handle SCSI acces to/from Fast-RAM? Isn't it a
> : DMA operation on the TT?
>
> The TT always uses DMA.
> Nothing else.

If it does, how do you get the data from the DMA to Fast-RAM
then, or can you only run the programs in ST-RAM if you want to
use the SCSI on the TT? Somehow the data must be transferd from
DAM to Fast-RAM and the only way I can come up with is to use
ST-RAM as a buffer.

Maybe some one who knows (apparently either you or me knows) could
explain how all this works.

FRB buffers (both MagiC and HD-Driver), DMA transfers from ST-RAM
and Fast-RAM etc.

Uwe?

Aha, I guess it all got a bit confusing there. Is serial transfers DMA
transfers as well? That could explain it if MagiC with background DMA
enabled slows down all DMA transfers and if the serial port is a DMA
transfer.

Sorry if I messed up things.

Try replacing the space with %20.

Tae ...

As far as I know these are still available new from Hisoft Systems in the UK and are relatively inexpensive. Contact details are available at http://www.hisoft.co.uk (but no details of cartridge).

The bundled software includes a drum sequencer, a sample sequencer and 'editor' for recording and editing samples. I havent used the former much but 'editor' is actually very good with FFT analysis and a range of excellent digital filters. It only deals in .AVRs and .RPLs but as another posting points out 525 is an excellent sample conversion program.

Later,
Jim.

Yup the same problem here as well, but replacing them with %20 worked.

Anyway, it would be nice if he could translate it to ensglish as well.
Looks
like he has got a huge collection and a few cool things.

Another thing that striked me was the different computers he listed and
prototypes and projects. He mentioned the Milan which was supposed to
be manufactured by IBM and would be based around the PPC chip. I do
remember someone rambling about that he had seen TOS on a PPC box from
IBM some years ago. Was this realy true? Sounds to good to be true to
me but it would have been cool if it did excist. I kind of doubt it but
you never know.:-)

On the TT you can do SCSI-DMA transfer to/from TT-RAM. This isn't possible on e.g. Falcons with real fastRAM (Afterburner and Mighty Sonic) so it has to use the FRB for SCSI-transfers as well as floppy.

If someone would port Netscape I would expect to get ALOT of support
and chearing, but I would not expect to get much help if that is what
you ment. Something like this would be very much appreciated indeed.

So why not give it a shot? Just to show of for the rest of the world
that it's possible would be forth it IMHO.

Just imagine running Netscape 5 on a Atari! That would be very cool
indeed.

That was what I suspected and this is what is causing troubles on
a 040 if the FRB buffer is not marked as not cacheable. Not such a
bright idea to cache this are. :-)

I know that HD-Driver has a opton for FRB. If this is enabled,
does HD-Driver set up a buffer of it's own or? This is something
that we are having problems with on the AB040 under MagiC as
it's not sure which FRB buffer is used and the buffer used by MagiC
can't be located.

Well I guess this is the problen. Who is distributing DISKUS right now
(in germany and outside)?

I think I know who could do it (they have translated big manuals from
German before), but I'm not sure he will do it.

Maybe I can ask and see what they say.

Not completely true. The A/box is a complete computer, it was about
adding a PPC accelerator card for the Amiga. The Amiga2000 has got a
similar expansion bus to the Falcon so it should be possible without
to much hassel. I think however that this project is scraped and
there is another project on it's way...

>
>I unsubscribed about 2 weeks ago thinking it didn't work. I never tried

Correct, it doesn't :(

>to post their though. It would be a great place to say..... ANNOUNCE the

Well exactly, thats why it was created, but you have seen some of the
crap people announce, SPAM:(So it was created as a moderated
newsgroup,

>ST software. IF it hasn't worked in 3 years, why are their all these links
>to it on websites. Thats where I got the address from?

People make websites and link to the newsgroup without investigating
first (poor web authoring) and some made there web pages and havent
updated them to the fact that the group is useless (again poor web
authoring)

As far as i can work out, when a newsgroup isnt used, it dies,
becomes extinct, But even though this one hasn't been used for well
over 3yrs that I know of..it still survives, two possible reasons? 1)
do moderated groups fade and die like others, or do they have to be
pulled, 2) is the odd posting made to see if the group works, keeping
it alive, even if they never see the light of day..who knows :(

>
>There must be someone who is in the know that can get it fixed?

There where a couple of people in this group ages ago there where
well up on this sort of thing, very well up on it, but they couldnt
sort it out? I think its just one of them things....:(

As you are saying... a shame and a sad waste really,

>can be had real cheap!) Atari, Mac's and Motorola rule. Keep Intel "outside"!

the best thing would be to get ahold of a proper RAM board for the
STf that will allow you to use 30-pin SIMMs, which at the moment are
going real cheap (here in Toronto there's a place selling 4 1-meg SIMMS
for $13 CDN). The Marpet X-Tra RAM was/is the standard for the
modification (is it still being produced?), and Best Electronics is
producing a similar board.

Please note (as I know from a friend who's installed one of these
things) that to bring it to four meg that you'll need to do some
surgery on the motherboard so the memory can be properly accessed. Of
course, such a board is much easier to install than soldering DRAMs
directly to the board

Are you sure about this? I though all DMA transfers on the TT had the
same limitations as on the Falcon with Fast-RAM. Has the TT got DMA
sound as well? If it does, can you use Fast-RAM for DMA sound playback
on
the TT as well then?

Hi,

try to use a 72-pin 4MB PS/2-SIMM.

```
72 pin SIMM
---------------------------------------
| |
) _ |
--|||||||||||||||/ \|||||||||||||||---
1 36 37 72
```

get the old ram out or disconnect it (it is placed under
the powersupply) and solder thin wire directly to the
simm (perhabs you have a simmsocket, this makes it easier)

```

Thanks Tom!

That worked.

Have you (or anyone else) had success sending commands to a printer like an HP IIP Laserjet telling it to turn the page sideways or print on a Monarch envelope for envelope printing?

The only time my printer seems to recognise this is if I send it during printer initialization (at the start of the file). Thus, all printing is done sideways on the page.

Any help appreciated.

Willard.

> and save.

I do have it saved as active, but that's because I'm lazy and when I have a
crash, it's quicker when doing a reboot. Usually I save it as soon as I've
connected and then save again after I've disconnected.

> Still, if your setup "mucks up the data", then the comms program is at
> fault, because it ignores the locking of the serial ports done by STinG.

Quite probably. The comms prog I use is the Freeze Dried one. It's okay as
long as Sting isn't active. As soon as it's active, there are lost chars,
so all I can say is it ignores anything else that locks the serial port.

It really doesn't matter now since Freeze Dried is incompatible with Magic
so before I use it I have to boot under TOS. To this end I have a Kobold
job that renames the XCONTROL.ACC, STING.PRG and MAGXBOOT.PRG. Then I
do a cold boot and am ablt to use the comms prog with no problems.

FIRST THE SOFTWARE:

1. TRUEPAINT V 1.02 $18 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B\W. to true color.

2. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

3. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio-video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $20 (Falcon).
Needs Multitos.

4. LDW power: Excellent spreadsheet program. It makes all the files you create with
this software compatible with the Lotus 123 format (has acc/prg. covert utility)
$ 2.00 no manual original disk only. (all Ataris).

HARDWARE

1.ST 1040F 1MB ram. This machine has an audio output jack (RCA female) so you
can plug in to your external ampolifier. No need for pre-amp. It will go with
hayes modem/cable and the famous beetle mouse!. $50

2. Intel External 144e (14.4Kb) FAX/MODEM with cable for Atari or pc. $32.
(has original PC software)

3.Atari PS for external Disk Drive $10

4.external PS for the 520ST $8.00

Free stuff (with the buying of any of the items :) :

Free manuals: HD Driver 4 rev 1.1 1/96
Deskjet utilities pack v 1.2
Calendar and appointments
Atari falcon AFM; D2D; SAM.
Imagecopy 2
Pagestream 2 quick start manual
available
omnires

truepaint
Soft-hard:
- Omnires Monitor emulator for the ST.
-External floppy drive 1DD good case/mechanism.

If interested send ZIP code to ask UPS for charges.. For software I can send it for $3.00 US priority mail. (if you are in the US; I am willing
to send abroad also) Regards,
Phil.

Hi folks,
I hadn't managed to get them yet, however if we can sort out a method of getting them to me I do have access to a CDROM burner at work and would be only too glad to get some made. Danny, can we sort out a transfer method, everyone else start saving up for a blank CDR and some stamps :-)) Hopefully where I work will be getting a bulk CDR copier soon :-)))))))))

or the Atari Webring: www.webring.org/cgi-bin/webring?ring=atari;list/
or TAF: www.interlog.com/~schrist/taf/

There is an adaptor that was sold with Falcons that connect the SM/SC
series monitors to the Falcon. There was a Heatseeker SLM interface for
the Falcon, but from what I could tell there was some bad history there,
and either few or no units were shipped. Correct me if this is wrong.
Wizztronics did a prototype interface, but I understand it never went
into production.

Reply-to: helmar@argo-navis.com
Priority: normal
In-reply-to: <199801281050.KAA28468@irwell.zetnet.co.uk>

Hi Keith,

as long as Opera is small and has very limited resources, we will for
the time being only pursue the OS/2 and Mac market. We would love to
port to other platforms, but this is quite an undertaking in terms on
manpower and finances. I would say 'stay tuned' and see how we progress
on the other platforms. If they generate sufficient interest and sales,
everything is possible.

Kind regards,

Helmar

Has any one experienced regular crashes of Cubase Audio on a Falcon which is generally followed by about 14 bombs and a horrible digital noise. Any information about, or solutions to this problem would be appreciated.

Thanks

Austin Walshe

1829. Adding SIMMS memory to my 1040 STf--help!

Newsgroup: comp.sys.atari.st
Date: 1998-01-28 00:00:00 UTC
From: nine2pleez@aol.com
Message-ID: <19980128000300.TAA06155@ladder03.news.aol.com>
Source record: 109014

I have 2 1040 STf's and I don't care what anyone thinks or who closes whatever ftp site, Atari is one of the quickest, easiest to use formats when it comes to MIDI. I own a studio with a PC, a Macintosh PPC and Atari systems and even when people visit the place, the Atari is still one of the most popular formats used here. :) Now my question:

I know that the STe has a Simms slot for memory expansion. The STf does not but there is a way to increase the Simms memory in the "f". I read it somewhere-maybe Toadnet, not sure. Is anyone out there familiar with the process, know of tech link on the net, or know where I can find any resource showing me how? Please write if you can help. Let's all continue to promote this fabulous machine and keep it alive. (They're a lot of them out there and can be had real cheap!) Atari, Mac's and Motorola rule. Keep Intel "outside"!

1830. ATTN Shareware Authors

Newsgroup: comp.sys.atari.st
Date: 1998-01-28 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19980128001100.TAA26088@ladder02.news.aol.com>
Source record: 109015

THE COMPUTER DUNGEON is looking for Shareware authors who would like us to distribute their programs here in North America.

We are setting up a system whereby North American Atari users can order a full copy of your shareware program from us and we send you payment for each copy we sell.

We believe this system will help everyone in that:

A) North American Atari user's will now have an easy way of registering their copies without the hassle of finding the proper way of making payment (i.e. which "note" to purchase; converting dollars to pounds, francs, etc.);

B) the easier it is to register a program then the more registrations there should be;

C) with more registrations of your program comes more registration payments to you, the author;

D) and with more registration payments, you will hopefully continue to you to write and support the Atari platform;

E) which means everyone is a winner.

If you are an author of an Atari program and would like The Computer Dungeon to distribute your title here in North America, please contact us by phone (708-547-7085), FAX (708-547-6550), Email (ComDungeon@aol.com), or on our website:
http://www.mcs.net/~isis/dungeon/dungeon.htm

Thanks for taking the time to read this and we look forward to hearing from you.

Al Horton
The Computer Dungeon

>

I remember when Tom Hudson left. I never actually paid attention to the file format because because I thought it was really the same as the Atari. There were many programs on the Amiga that could load 3DS and 3D2 so I never gave it much thought. I would have thought that 3DS would be the easiest to covert? I am surprised it was never done, I am very surprised.

>>>. DynaCadd loaded them happily and converted them to 3D2

Dyna Cadd is marvellous. The last version I saw didn't have perspective though. But then again it is a Cadd prg not an animator.

>>>where they were imported into Raystart and rendered quite nicely.

I intend to try Raystart in the very near future if all goes well.

>
>I have been thinking of posting to my FTP some converted (DXF to 3D2)
>files for those to use that have Phoenix or another app that accepts
>3D2 format only, if anyone is interested.......
>

I am very interested in animation and graphics. Unfortuneately I am not at all up on the Atari Offerings. Really not anything past 1992. Lexicore was new and we went to Amiga then PCs. Right Now PCs are the most affordable and fastest systems for animation. What a shocker eh? 13 years after the Atari offered affordable animation, PC users can enjoy it too. Now they know what I was talking about way back then:-). Don't start an Alpha disscussion here based on my cheapest/fastest comment;-).

So really, um, what is phoenix? And does anyone know of a program to translate 3DS files on the Atari? Also it would be nice if we could play animations created with NEWTEKs software.

Of course more horsepower would be good too, boy now I am thinking graphics again. better stop. Even a Hades couldn't render an image as fast as todays pentiums. But it stil would be faster than my ST.

Yes, I am interested.

You will get MANY answers here and as for the best I am not sure? But I will tell you that I use NEWsie for Mail, FTP and NEWS and sometimes I use its Browser as it is faster than CAB.

For a Browser the STandard I have noticed is CAB. I use version 1.5 which does quite a bit, however if you want the best the commercial versions of CAB offer alot more modern features.

Speed with Graphics will be the biggest drawback, but it can do it.

>I have TOS 1.06 what can I do to upgrade the TOS and what will it do for

If I understand correctly TCP/IP will work between the two.

>(I have an older notebook PC with no CD)

It will be available through FTP and not like an added drive.
I hope the information I have given you is accurate. I believe it to be so but I have been wrong before. And there is always someone around to correct me:-).

I unsubscribed about 2 weeks ago thinking it didn't work. I never tried
to post their though. It would be a great place to say..... ANNOUNCE the
NEW software, commercial, shareware and Public domain, that is being
released. It would be good even for all these weekly adds we see offering
ST software. IF it hasn't worked in 3 years, why are their all these links
to it on websites. Thats where I got the address from?

There must be someone who is in the know that can get it fixed?

Can someone direct me to the best website to get falcon information.
Something that covers the basics and then more technical information.
After looking at a brochure, (I have 5 year old brochure still:-), I cannot
see how you can hook up a standard ST colour or mono monitor to the falcon
without changing the connector. I also don't see how it can be possible to
hook up an SLM 804. So knowing that these questions were asked YEARS AGO and
MANY Times, you don't need to answer here if you don't want to, just direct
me to a falcon page, where I can read on my own and not look so poorly
informed:-).

I'll let someone else point you to a good web page, but as far as the
SC1224/SM124 is concerned, you use the same adapter (you have to have
an adaper for any monitor with the Falcon video port). It's just like
plugging into your ST(E).
As far as the DMA printer is concerned, there was a product called the
Heat Seeker that was suppose to allow the SLMs to connect to the
Falcon. I thought I read where it didn't work (even after marketed)
but I did see an advertisement in ST Computer (German rag) for them as
late at July 97 issue.

Absolutely - it's like BBEdit on the Mac - it's bizarrely capable, but without any of the page layout, font frills. Perfect for more advanced functions.

>without changing the connector. I also don't see how it can be possible to

basically you need an adapter to do this. No idea where to get such a thing.
Most people would prefer using a cheap VGA monitor to benefit from the Falcons
enhanced screen resolutions.

>hook up an SLM 804. So knowing that these questions were asked YEARS AGO and

You cannot connect an Atari laser printer to the Falcon. I seem to remember
seeing a special adapter that would allow this, but it was way too expensive
to be worth it.

>MANY Times, you don't need to answer here if you don't want to, just direct
>me to a falcon page, where I can read on my own and not look so poorly
>informed:-).
>

No problem, these questions don't come up that often.

Cheers,

Nick.

Cross-posted to: or.forsale,pdx.forsale,pnw.forsale,pnw.wanted,comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.atari

I have bunch of computing items for sale, everything used less than 1 ~ 6 months. Below are the items and Prices I'm selling. Let me know if you are interested.
I'm living in PDX. But shipping is no problem once I recieve the $$, or COD Cash is ok too.
send me an email if you need more info on any item.
reply to qdesign@ipns.com

Hardware

O Western Digital 6.4GB UDMA33 HDD - $245 (2 month old)

O 64MB SDRAM EEPROM 10ns w/ 8 chips - $150 (1 month old)

O HP 4C 600DPI optical res. Scanner New condition - $650

O WACOM ARTPAD 12"X12" w/ pen - $270

O 21" Viewsonic 1600X1200 max PT813 w/ SonicTron Tube - $1200 (still under 2 yr manufacture Warranty)

O USRobotics Sportster 33.6Kbps upg. to X2 56K w/ voice Full duplex - $60 (not a Winmodem)

O NEW Western Digital 9.1GB Ultra Wide SCSI HDD w/ Adaptec 2940UW SCSI Adapter Bundle - $999

O Matrox Mystique 220 retail box with Manual & CD Games with 8MB SGRAM to boost your 2D/3D games - $159

O SuperMicro P6DLE Dual Pentium II Motherboard w/ LX Chipset / AGP / 4DIMM / 3 ISA / 4 PCI / ACPI/PC 98 Features / ATX / USB - $275 ($539 with 233MHz PII CPU)

O Diamond FireGL 1000PRO w/ 8MB SGRAM w/ 8ns AGP - $179

O AOC 17" .26 Monitor 1280X1024 Max res. w/ JAG Digital Control w/ Dark Tint Screen for Acurate Colors. - $399

######### SOFTWARE #########

O Adobe Pagemaker 6.5 Full version with manual and CD in Box - $170

O Bryce 2 by MetaCreation - Create your world easily in 3D with built in modeler; save in major graphics format - $99

O Windows 95 OSR2.1 w/ USB w/ manual on CD Full version - $69

O MS Office 95 Standard Edition for Windows 95 oem - $69

O Macromedia Freehand Graphic Studio 7 w/ Freehand, Fontographer, more ... - $195

O Kai's Power Tools 3 for Win 95/NT - $85 (nice plug-ins for photoshop)

O Ray Dream Designer 4 by Fractal Design Corp. CD & Manual - $95

O Adobe Photoshop 4.01 Upgrade version 2 CDs - $120 w/ Manual

O The 11th Hour - sequel to the 7th guest - 4CDs - $30

O Kinetix 3D Studio MAX R2 Full Version 2CDs for Win 95/NT - $1795

All the parts & prices are effective from Jan. 28th 1998.
Please email me if you have any questions relating to any parts I have on sale.

Thanks
Kevin -

The _FRB is also used for all hard disk transfers between drives
connected to the DMA (ACSI) bus and TT-RAM.

That depends on what the firm pays that is willing to distribute DISKUS
in an English version. This firm would have to pay for the complete
translation, including the translation of the DISKUS-internal texts and
the RSC file and they would have to pay license fees, of course.

: I've just got back from a business trip in the States... and I am out
: in Europe from tomorrow night.. I'll see what i can do later tonight
: or early tomorrow.. maybe save them on the CyberSTrider server.

OK, as a follow on from this, I have just downloaded all the Atari files
from hensa to my server at CyberSTrider. Took me 1.5 hours using a robot
mechanism.

I have written to the hensa guys asking if I can make these public,
especially as the .msg files and index are copyrighted to them.

I can not do anything until I get a response from them.. and even
if it is an unfavourable response, it just means a bit more work for me
removing the .msg files - the software itself is fine. I can
only deal with this bit while I am at home - currently at a conference
abbroad...

I'll make another posting when this is available to the public. I
am also going to be producing a shareware/freeware CD which I am
planning to have available in Q2 if 1998.

> German before), but I'm not sure he will do it.

Do you also know who will pay all this and who is able to get the manual
printed and the software supported and so on? And do you know several
hundred users definitely paying 159 DM or more for DISKUS in order to
make all this profitable for?

Good question on the new programmers out there. I was also thinking about
the older programmers also, especially the ones here, like you, me, Tony,
and a bunch of others. It's still worthwhile. We just pass it on to the
new programmers who will then pass it on as well.

I have a very strange problem here.
If I make an image-file of the files I want to burn
and place the image on my scsi drive. When I start
to burn that image and sometimes in the middle it
says "scsi buffer underrun". The strange thing is
that it has worked for months without problems.

It happens more often when I want to burn audio-cd's,
BUT if I have my audio-files on my IDE it works fine.

I know what that message means, but it has worked before
and now it happens all the time.
Has something happend to my scsi-chip?

By the way, I have a Falcon.

>Does this work ?
>

I did something similar with an 8 Mbyte SIMM. Of course, I could only access
the bottom 4 Megs, but that's all the STFM can use anyway.

It's been working really well for several years now.

Watch out for the SIMM CAS 0,1,2, & 3 lines; sometimes CAS0 & CAS2 are
connected together on the SIMM (via a small 0 ohm resistor), also with CAS1 &
CAS3. You will need to remove this resistor to get it to work.

And it is just possible to squeeze the SIMM under the power supply (in a 520
Kbyte STFM).

The SCSI version of the Zip drive comes with a 'special' dual-format Zip
disk. I assume it has drivers and utilities for both the PC and Mac.
System 6.0.8 or greater is required. I don't know enough about Spectre GCR
to confirm if it would work, though.

1859. Cranach v3.10/r1.04 Wanted

Newsgroup: comp.sys.atari.st
Date: 1998-01-29 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <6apm64$mk2@thoth.portal.ca>
Source record: 108844

TMS Cranach Studio v3.00/r2.10 has some palette problems in 16- and 24-bit color modes running under Computerinsel's NOVA VDI 2.61. Gerhard Huber of Computerinsel has told me the palette problem is a bug in Cranach itself and was fixed in v3.10/r1.04.

Is there any chance someone is using this version of Cranach? Because TMS is out of business, I can't get the update the normal way. Would a kind soul out there be willing to help me and translate this to German and post it to the equivalent newsgroup? Cranach was never released outside of Germany, so my best chance would be in a German-language newsgroup.

It's important to note that I bought Cranach some years ago (with original disks and documentation) from a German-Canadian professor who made frequent trips to Germany, so this is _not_ a request for pirate software. There's no other way to get the update except to ask another Cranach user (most likely a German). All I require is the '030 binary (previsio.prg) and its two resources (studio_0.rsc, studio_1.rsc). I would be willing to buy this version of Cranach, too, if someone is no longer using it.

If all fails in my attempt to get the newer version, at least I can say I tried in both English and German. Any help would be greatly appreciated!

Bin off ST Calc unless you need all the funky T-test and Chi test
stuff, Get K-Spread 3 which is a newer version of the same package
try Opus 2.3.1 instead as it does graphs as well. and if you find the
full version from whichever FTP site it's at you can ALternativly
slpash out and get Texel from somewhere like System Soutions

Okey, so enabling it wont atleast cause any troubles. Thanks for
explaining what it's for.

> > that we are having problems with on the AB040 under MagiC as
> > it's not sure which FRB buffer is used and the buffer used by MagiC
> > can't be located.
>
> The standard FRB is used.

And it's MagiC who handles this one? Would it be possible to set
HD-Driver
so that it alwaysed used the XFRB buffer, or will that not work with the
OS?

As I have said before, on the Falcon with Fast-RAM (AB040 or
MightySonic030)
you must set the the buffer used by SCSI/Floppy to none-cacheable.
Currently
this is not possible with MagiC (atleast not to our knowledgs) as it's
not possible to locate the FRB buffer and mark it as none cacheable. On
TOS/MiNT this is possible and works just like it should, with MagiC
this cause disastrous consequenses as the CPU is able to cache the
buffer
making your files going highwire.

So does anyone know how to get hold of this FRB buffer under MagiC so
that it can be set to none-cacheable? We have tried to get some info,
possible solutions, hacks, whatever, for along time now, but with no
succes. So currently we suffer from unreliable or slow (all RWABs are
patched, or whatever it's called) SCSI/Floppy access under MagiC.

This is with a AB040 installed. Not a very nice situation. There is
ofcourse a way around this and that is to mark all ST-RAM as
none-cacheable, but that is hardly an ideal solution either.

Probably not. Forget that I even mentioned it. I guess it's not good
enough or interresting enough to bother with, as well as letting other
users than german reading repair and maintain their disks. What a
bugger.

Sorry for trying to help, it wont happen again.

Not sure. I had it mailed to me by Bob Poggioli. The author, Lonny Pursell,
has a web site with his progs on it, but I haven't really looked for it, as
yet. If you want I can mail it to you. It's less than 40Kb uucoded.

: still a bit expensive to get chart support.

: Have you tried version 2? I guess it hasn't got chart support either?
: It looks very nice though but that doesn't help either.

Texel and Artworx use a system similar to OpenDoc or OLE, which is quite sensible to do because it would mean double work to implement chart ouptput and editing in Texel itsself and manpower in the Atarisoftwaremarket is limited. It is interesting to see how things like OLE work on the Atari that many users do not get to wotk properely on Win NT etc. platforms.

In addition, Artworx is not just a chart application but a full vector graphics package similr to Freehand or Corel Draw - which means that you can do much more with your charts than with Excel. Also, the price quotes are not correct. And being an ASH power user the prices go down considerably. LDW cannot import Excel files, which Texel can. But it is right that in some areas in terms of spreadsheeting there is still sth. to be done in Texel (e.g. string functions that are non-existing).

I see, but this is for a TT, not for a Falcon with Fast-RAM. I think
this
is the problem and what Andreas has missunderstod. He was always
thinking on
how the TT works and he probably though that the Falcon worked the same
way. On the Falcon with Fast-RAM this does not work as you can't use
DMA to/from Fast-RAM so all data has to go through this buffer somehow.
Also the AB040 has got a 040 CPU (suprise) which has got bigger caches
and probably more advandes than the 030 in the TT as well. So the FRB
buffer must be marked none cacheable which currently isn't possible
as we don't know where the buffer is located in the first place. The
FRB cookie should point it out, but Andreas have said that MagiC
doesn't use the cookie.

> > of it's own and the one in MagiC will be ignored, or will it use
>
> No, HDDRIVER itself doesn't use this XFRB at all. It uses the standard
> FRB provided by the operation system, regardless if this is TOS or
> MagiC.

I guess HD-Driver doesn't care about where the FRB buffer is, or even
knows
where the FRB buffer is. All this is managed by the OS right?

> > If it does, how do you get the data from the DMA to Fast-RAM
>
> See above. We shouldn't confuse ACSI and SCSI here. Both busses use DMA
> but devices connected to ACSI don't have access to TT-RAM. The ACSI bus
> is often referred to as DMA bus. I prefer the terms ACSI bus and SCSI
> bus because both do DMA.

So you could say that on a Falcon with Fast-RAM the SCSI port works
like the ACSI port on the TT.

So now we are back to square one but hopefully we have cleard up a few
things here.

A Falcon with Fast-RAM and SCSI could be compared to a TT with ACSI and the same limitations. I hope this is correct and that it help to clear things up for Andreas. I hope I have got it right this time.

I guess the main problem here is that MagiC doesn't use the FRB cookie correctly as it normaly would point out where the FRB buffer is located and the size of it. I guess this is what the cookie partly is for, pointing out where the FRB buffer is located i RAM.

Correct me if I'm wrong, but the bottom line is that on a Falcon with AB040 and Fast-RAM you soon get into trouble under MagiC when accessing the SCSI or Floppy as they both are DMA devices and the FRB buffer is not possible to locate and therefor the CPU might cache it.

I guess I have said that 100 times now....

Probably they are, NEC has a lot of multi-sync monitors. Most
multi-sync's will do standard VGA resolutions. When it are
old type NEC 3D monitors you can use them for ST low and ST high
too (esp. interesting for the Falcon, all VGA, RGB and ST-HIGh
resolutions on one monitor).

Ofcourse is it nice when programs cooperate, but when you buy a spread
sheat program you still expect it to output charts, even if it's in a
limited way. If Texel could just output limited charts it would be okey,
but now it can't output even the most basic charts and that is not
enough
if you ask me.

> In addition, Artworx is not just a chart application but a full vector

Sure I belive you that Artworx is much mroe than a chart aplication, but
that
is not realy the point.

> The TT has DMA sound.

Well it depends on how you look at it. If you have got a Falcon in
the original state as it was ment to work you can use DMA transfers
to the complete memory space just like on the TT. The problems
arise then you add an accelerator with Fast-RAM to expand the memory
space beyond 14MB, which is the physical limit for DMA transfers on the
Falcon. With extra memory added as Fast-RAM can't be accessed by the
DMA hardware in the Falcon as it's beyond it's address space.

But the thing was how this works on the Falcon with MagiC. We all know
by now that the TT and Falcon with Fast-RAM works differently. Would it
be so hard to add a pointer in the FRB cookie supplied by MagiC to
this memroy buffer?

The problem is with the FRB buffer and Falcon+Fast-RAM.

Hey! rsg0910@iglou.com (Robert Goodwin) wasn't it Thu, 29 Jan 1998 08:27:12 GMT that you wrote:

>>there so few potential new programmers left to make it unworthwhile?

>and a bunch of others. It's still worthwhile. We just pass it on to the >new programmers who will then pass it on as well.

OK heres a thought I have been kicking around for ages...but?

I know most people have a downer on STOS, But the fact is I can make a fast 8 way scrolling platform game that would rival Sonic, and it will work on anything from a one meg FM through STe. megas, TT's and Falcons with afterburner and nemesis, this isnt showing off, its been done, No one needs fix or do anything special, just run your TT ,Falcon or bog standard ST and the game plays..and its smooth and fast as others should testify.......

Now its taken quite a few years with a hell of a lot of trial and error :(and new add ons being made to get to the point where the above can be done, Most of the time taken up with experimenting..

I could take a complete beginer, someone who has never programmed before, cut out all the trial and error and pass on the end results in a rediculously short period, a complete novice could make the above mentioned game in 3 months, anyone who knwos how to use Variables and has an understanding of an ATARI screen layout ..half that,

Unfortunalty theres a LOT of biased people out there who wont even download and try a game simply because of the word STOS, they all believe its still in the past :(No matter how I try I cannot get them to realise what it can do.....

So anyway :) I honestly wouldnt have the incentive to do the above for one or two people, but if I could get ten people who are determined to make a quality game and dont have a pre defined bias towards STOS and do have a couple of months then I would do it en bloc

If interested then go get Heartland to see what i mean as thats what I would teach everyone to make but with your own artwork:) ho and thats a couple of yrs old now, I can make it more compatable than it is :)

Java is certainly possible on the Atari (Craig Graham runs it on his Falcon), but on a standard ST it would be painfully slow. I don't know if it even works with only 4Mb.

If you have no HD then 1.0 is good enough. If you have an HD then you
should look for 1.4 which has far better HD handling.

If you had more RAM than 512Kb I would recommend forgetting TOS and
going straight for Magic.

I have a set of 6 1.0 ROMs if you need them.

| > it's not sure which FRB buffer is used and the buffer used by MagiC
| > can't be located.
|
| The standard FRB is used.

I wonder - I partly downgraded my AB040 from HDDRIVER 7.02? to 6.13
(booting first with AHDI) after having problems with crashes in GEMAR. I
was running with the HDDRIVER FRB option off, I thought on AB040 TK
driver instructions.
Would I need the XFRB on to use GEMAR on a fastram Falcon? - or is the
XFRB just to speed DMA buffering when more than one program is using it?

I think you took Uwe's comments the wrong way. I don't believe he was trying to be negative toward you. He was just being realistic, making sure you understand everything that's involved. It apparently is a MAJOR undertaking that makes it virtually unprofitable.

And there are other English solutions for repair and maintaining of disks (though I too would love an English DISKUS), so it's not like it's either DISKUS or nothing.
